## Description

The MPB125 Series incorporates patented high efficiency circuitry, high power density and active Power Factor Correction (PFC) to meet the requirements of networking and data communications systems, as well as commercial and industrial configurations.

Dual output units deliver a regulated main output plus a second 12V output for fans or other system functions. Multiple output models provide tightly regulated DC power in a variety of configurations. The MPB125 is rated for convection as well as forced-air cooling. Full output power is available with as few as 5 Cubic Feet per Minute (CFM) forced-air cooling with the exception of the MPB125-2003 and -2003D which need only 10 CFM for full power. Optional remote on/off with standby power is also provided (see Options). The MPB125 product line is approved to the latest international regulatory standards, and displays the CE Mark.

DESCRIPTION	NOTES
Remote On/Off Standby Output (Option R)	Remote On/Off is a TTL-compatible signal. A logic "high" or open circuit turns the unit on. Reverse inhibit logic can be achieved by changing the position of the J6 connector. A logic "low" inhibits all outputs except the 5V standby. At remote off, the Power Good signal will warn the host equipment 2 milliseconds before the main output goes out of regulation. The rating of the standby output is +5V @ 0.2 Amps. Total regulation is ±5 %. Maximum noise and ripple is 50 mV peak-to-peak @ a 20 MHz bandwidth.
	NOTE: The addition of Option "R" increases the supply width from 3.0 to 3.8 inches. Consult factory for availability.

**NOTES:** <sup>1</sup> For MPB125-2003 and -2003D, a minimum airflow of 10 CFM is required to provide the maximum current of 30A on V1. V1 current can be as high as 25A with a minimum airflow of 5 CFM.
