

Voltage keying/coding pin for PMC mezzanine boards

Part no.: 60827-026

Features:

- To prevent accidental damage when fitting mezzanine boards, keying/coding pins are bolted to the VMEbus boards to distinguish between 3.3 V and 5 V operation. The mezzanine boards have a hole drilled in the appropriate position. The keying/coding pin thus ensures that only mezzanine boards with the same operating voltage can be inserted. For double-height euroboards 2 pieces are required.

Standard pack quantity 10

Technical information:

Description	Material	Item
Keying/coding pin5 V/3.3 V	St, zinc-plated	11

Note:

- Delivery is in standard pack multiples. Pricing is per individual item
