Cylinder Speed Chart

- * It is when the cylinder is extending that is meter-out controlled by speed controller which is directly connected with cylinder, and its needle valve with being fully open.
- * The average velocity of the cylinder is what the stroke is divided by the total stroke time.
- * Load factor: $((\text{Load weight} \times 9.8) / \text{Theoretical force}) \times 100\%$

 When ordering, specify the part nos. in order from the 1st. station in the D side.
 When entry of part numbers becomes complicated, indicate on the manifold specification sheet.

Plug-in Type: With Terminal Block

- Since lead wires of solenoid valve are connected with the terminals on upper surface of terminal block corresponding lead wires from power source can be wired at the bottom of terminal block.

Note) P port or EA/EB port of symbol "3" to "8" can be individual port with block plate. Therefore, if using individual SUP spacer or individual EXH spacer for individual port, its symbol is "1".

Cylinder Speed Chart

- * It is when the cylinder is extending that is meter-out controlled by speed controller which is directly connected with cylinder, and its needle valve with being fully open.
- * The average velocity of the cylinder is what the stroke is divided by the total stroke time.
- * Load factor: ((Load weight x 9.8)/Theoretical force) x 100%

- * It is when the cylinder is extending that is meter-out controlled by speed controller which is directly connected with cylinder, and its needle valve with being fully open.
- * The average velocity of the cylinder is what the stroke is divided by the total stroke time.
- * Load factor: ((Load weight x 9.8)/Theoretical force) x 100%

Be sure to read before handling. Refer to front matters 58 and 59 for Safety Instructions Instructions and pages 3 to 7 for 3/4/5 Port Solenoid Valve Precautions.

⚠ Caution

Attaching and Detaching Connectors

- To attach a connector, hold the lever and connector unit between your fingers and insert straight onto the pins of the solenoid valve so that the lever's pawl is pushed into the groove and locks.
- To detach a connector, remove the pawl from the groove by pushing the lever downward with your thumb, and pull the connector straight out.

Attaching and Detaching Lead Wires with Sockets

Peel 3.2 to 3.7 mm of the tip of lead wire, enter the core wires neatly into a socket and crimp it with a special crimp tool. Be careful so that the cover of lead wire does not enter into the crimping part.

Attaching and Detaching Lead Wires with Sockets

1. Attaching

Insert the sockets into the square holes of the connector (with + and - indication) and, continue to push the sockets all the way in until the lock by hooking into the seats in the connector. (When they are pushed in, their hooks open and they are locked automatically.) Then confirm that they are locked by pulling lightly on the lead wires.

2. Detaching

To detach a socket from a connector, pull out the lead wire while pressing the socket's hook with a stick having a thin tip (approx. 1 mm). If the socket will be used again, first spread the hook outward.

Plug Connector Lead Wire Length

Standard length is 300 mm, but the following lengths are also available.

⚠ Caution

Plugging one of the cylinder ports (A or B) enables use as a normally closed (N.C.) or normally open (N.O.) 3 port valve.

It is convenient when 3 port valve is needed on a manifold, etc., but it can't be used in special applications such as using as a non-leakage valve. Use it with the exhaust port leaving open.

How to Exchange Solenoid Valves, Pilot Valve Assemblies

How to exchange solenoid valves

- Loosen set screw and take solenoid valve out vertically, otherwise it may cause damage to the solenoid valve. Never remove valve at an angle.
- When mounting solenoid valve on to the base, plug pin assembly (base-side) into receptacle assembly (body-side) vertically.

Tightening Torque for Mounting Bolt

Model	Thread	Tightening torque
Pilot valve assembly	M3 (2 pcs.)	0.6 N·m
VFR2000	M3 (3 pcs.)	0.9 N·m
VFR3000	M3 (3 pcs.)	1.1 N·m
VFR4000	M4 (4 pcs.)	1.4 N·m
VFR5000	M5 (4 pcs.)	2.8 N·m
VFR6000	M8 (4 pcs.)	16 N·m

Note) For more information about the procedure, refer to the instruction manual.

How to exchange pilot valve assemblies

- Possible to exchange pilot valve assemblies like the following figures.

Note) Do not change the rated voltage.

• To combine a reverse pressure valve and an interface regulator, use the ARBF3000, ARBF4000, or the ARBF5000 model. The P port pressure reduction cannot be used.

• When combining a double check valve and an interface regulator, use a manifold or sub-plate as a basis, and stack them in the following order; the perfect spacer → the interface regulator → the valve.

• When a closed center valve is combined with the interface regulator's A, B port regulation, note that it cannot be used for intermediate stops of a cylinder because there is leakage from relief port on the regulator.

Operational Guide For Series NVFR

Precautions

Piping

- ① Use appropriate I.D. piping.
 - ② Before piping, flush out to remove dust, scale, chips, seal tape, etc. in the pipeline both on the supply side (supply pressure port side) and secondary side (operational equipment port side).
 - ③ In the case of 3 position closed center valve, check leakage from piping and fittings between the valve and cylinder by means of soapy water to ensure that there is no leakage. Also, check the leakage from cylinder rod seal and piston seal. If there is any leakage, sometimes the cylinder, when valve is deenergized, can move without stopping at mid-position. Therefore, leakage from piping and fittings should be avoided.
 - ④ When applying teflon sealing tape to the thread area, wind it around the thread area 1-2 times and fasten it with finger nail. Be sure the thread extends one or two screw pitches beyond the taped area. Also, when applying liquid seal materials, leave 1-2 threads from the end dry, and avoid over-application.
- Never apply to the female side of the equipment.**

Clamping torque

Thread	Correct clamping torque inch-lbs (kgf/cm ²)
10-32 Nom (M5)	13.0-17.3 (15-20)
1/8 NPTF	60.7-78.0 (70-90)
1/4 NPTF	104-121 (120-140)
3/8 NPTF	190-208 (220-240)
1/2 NPTF	242-260 (280-300)
3/4 NPTF	242-260 (280-300)

Mounting

Single-acting valves can be mounted in any direction. In the case of a double solenoid valve or 3 position valve in a place subject to vibration, the valve should be aligned perpendicular to the vibration. (Never use in a vibration condition of more than 5G.)

Environmental Conditions

- ① When the valve is installed in a dusty area, protect the cylinder rod area to prevent dust from entering the secondary piping via the rod area. Install a silencer or elbow fitting with its outlet downwards to prevent dust from entering the exhaust port of the valve.
- ② When used in environmental conditions such as corrosive gas, chemicals or chemical solutions, steam, sea water, or temperatures higher than 140°F (60°C), etc., contact the SMC factory.

Lubrication

Valves are pre-lubricated. No further lubrication is necessary.
If a lubricant is used (if required for cylinder, etc.), install lubricator in the supply side piping.
Also, please note that the recommended lubricant is turbine oil #1 (ISO VG32). (Never use spindle oil or machine oil.) In addition, when valve is used at low temperature, low temperature oil should be used. The use of turbine oil at temperatures lower than 32°F (0°C) leads to increased viscosity and causes the valve to malfunction.

Leakage Voltage

It must be noted that in case of connecting C-R element parallel to switching element, leakage current flows through C-R element and the leak voltage increases.

Ensure that any voltage leakage across the coil is as follows:
AC coil : No more than 20% of the rated voltage
DC coil : No more than 3% of the rated voltage

Maintenance

- ① Excessive carbon powder and oil waste from air source (mostly from compressor) entering into the valve can lead to increased spool seal resistance and cause valve malfunction. In the worst case the spool can adhere to the valve. It is important to check the quality of air often. Please note that if SUP pressure is left under pressurization for a long time with inferior quality air, carbon powder and oil waste in the compressed air can deposit in the clearance between the spool and sleeve, build up, and cause the spool to adhere to the valve. To remedy this case, check the compressor oil and use the appropriate least oxidizing compressor oil. A high filtration Mist Separator (Series NAFM) installed behind a regular filter (Series NAF) can prevent foreign particles from entering the valve.
- ② If waste from air source adheres to spool and sleeve, disassemble adaptor plate area and end plate area (return spring insert area). Remove spool and sleeve from valve and cleanse them with trichlorane or freon solutions. When cleaning, prevent O-rings from contacting cleaning solutions. **Be sure to keep each spool and sleeve assembly paired.**
- ③ When disassembling and re-assembling, please ensure that all components are in their proper positions. Prevent gaskets from slipping, and tighten bolts equally.

NVFR Manifold Assemblies

HOW TO ORDER MANIFOLD ASSEMBLIES

- 1) Begin the manifold specification process from the LEFT going to the right facing the 'B' end of the valves (and the cylinder ports normally). The first valve on the left is considered Station #1.
- 2) For each station, specify the valve model number (or blank station kit no.), interface accessories if desired, and lastly, gallery blocking discs if desired. (Blocking discs will be placed between this station and the next one).
- 3) For identical stations in sequence, specify these at the same time. However, they must be in sequence to avoid confusion.
- 4) The last specification for the assembly is the manifold base. Specify the entire part number below the last station section. If the manifold is a complex assembly or mixture of block types, please refer carefully to the examples below and specify similarly.

Example Manifold Assembly Orders:

Standard Configuration Manifold:

<u>LINE ITEM</u>	<u>QTY.</u>	<u>DESCRIPTION</u>

Note 1) Indicate gallery for all blocking discs (P, EA, or EB), or any combination.

Note 2) "-02T" for manifold number is always side port size unless manifold is exclusively bottom-ported.

Note 3) If mixture is both port size and location, follow this example: NVV5FR3-01T-04M-M; then specify individually. (See note 2.)
