

# **Tubing**

- Nylon, Polyurethane and Polyolefin Tubing
- Standard and Metric Sizes Available
- Different Types for Various Applications
- Multitude of Color Choices

**SMC** is widely recognized as a world leader in motion automation technology. Our worldwide reputation for quality and reliability was earned through our commitment to research and development, engineering, sales support, and customer service. We are truly a global company with a local focus to ensure our customers needs are met wherever their business takes them.

We offer a comprehensive line of technologically advanced products. This product offering now includes a tubing product line that was developed and manufactured to meet SMC's strict quality standards. 12 different types of tubing for general industrial applications are offered as well as D.O.T. tubing and tubing made of Teflon®.

To address the different needs of industry, we offer Nylon and Polyolefin tubing in at least 2 different hardness ratings, and our Polyurethane tubing is available in 4 hardness ratings. To maintain the highest quality possible, the outside diameter as well as the wall thickness of SMC tubing are inspected during the manufacturing process for dimensional accuracy.

If your application happens to be spot welding, clean room, robotics, heavy vehicle or motion automation, SMC not only has the right tubing, but also offers it in Standard and Metric sizes in a multitude of colors. Contact your SMC representative at 1-800-SMC-SMC1 or visit us on the worldwide web at www.smcusa.com.

SMC is widely recognized as a world leader in motion automation technology.

# **Nylon Tubing**

Nylon was developed more than half a century ago and is considered to be the first man-made thermoplastic available. Deemed a rugged engineering plastic, its properties make it an ideal choice for a variety of applications. Nylon does not depend on moisture for flexibility and will not become brittle or swell because of water. therefore, it has excellent low moisture absorption and dimensional stability characteristics.

Nylon tubing for pneumatic applications is made from Nylon 11, and more recently Nylon 12. Nylon 12 has virtually the same physical properties and performance as Nylon 11.

SMC mainly uses Nylon 12. Nylon 11 is offered by request.

# **Properties**

- ▲ Dimensional stability
- ▲ Low moisture absorption
- ▲ Elastic memory
- ▲ High impact resistance
- ▲ High thermal resistance

- Light weight
- ▲ Wide temperature range
- ▲ High abrasion resistance
- ▲ Good flexibility
- ▲ Broad chemical resistance

# For general use

# **Dimensions**

# riangle Caution

**Burst Pressure** 

**Characteristics Chart** 

- Do not use with general industrial water. Water will cause the O.D. to shrink, which could cause leaks or the possible release of the tubing from the one-touch® fitting.
- **2.** Max. operating pressure and minimum bending radius are measured at 68°F.
- When using tubing with SMC fittings, the chemical resistance of the fitting has to be investigated as well.

# **Polyurethane Tubing**

Polyurethane tubing is fast becoming the ideal choice for pneumatic applications. It combines the elasticity of rubber with the chemical resistance normally reserved for plastics. Polyurethane can be put into two classifications, ester based and ether based. SMC offers both.

Ether based polyurethane is the preferred tubing material for general pneumatic applications due to its immunity to hydrolysis and its higher resistance to fungus and microorganism attacks. The Ester based polyurethane is a stronger compound but tends to hydrolyze with moisture. This hydrolysis process will degrade the material over time.

SMC's primary line of polyurethane tubing is ether based, made from the highest quality compound available, to ensure the longest tubing life. The ester based TUH series is the exception. This product line was developed to take advantage of the greater strength offered by this compound.

# **Properties**

- ▲ Cut resistant
- ▲ Excellent memory
- Wide temperature range
- ▲ Low compression set
- ▲ Low gas permeability

- Kink resistant
- ▲ Tear resistant
- ▲ Abrasion resistant
- ▲ Extreme flexibility
- Good chemical resistance

100ft

<sup>1</sup>Stocked item

Note\* - For 5/32 and 5/16 size tubing, please refer to 4mm and 8mm "How to Order" information on page 10.

# **A** Caution

- 1. Can be used with general industrial water. For other fluids, please consult SMC.
- 2. Max. operating pressure and minimum bending radius are measured at 68°F.
- 3. When using tubing with SMC fittings, the chemical resistance of the fitting has to be investigated as well.

# Series TJ Inner Sleeve TUS related accessories

Reinforces soft polyurethane tubing. Insert an inner sleeve into the end of soft polyurethane tubing when used with a One-Touch  $^{\text{TM}}$  fitting.

- 1. Do not use with general industrial water.
- 2. Max. operating pressure and minimum bending radius are measured at 68°F.
- When using tubing with SMC fittings, the chemical resistance of the fitting has to be investigated as well.
- **4.** Always use inner sleeve (Series TJ) in safety circuit or critical area.

# **⚠** Caution

- 1. Can be used with general industrial water. For other fluids please consult SMC.
- **2.** Max. operating pressure and minimum bending radius are measured at 68°F.
- When using tubing with SMC fittings, the chemical resistance of the fitting has to be investigated as well.

FR Double Layer Tubing Sectional View

# When using TRB/TRBU tubing with SMC One-Touch™ fittings

SMC One-Touch™ fittings are not designed to seal on the outer layer. To make a leak free tubing to fitting connection, one has to remove the outer layer. The fitting will seal on the inner tube. The TRB/TRBU tubing is called out by the diameter of the inner tubing so selection of the correct size fitting will not be a problem.

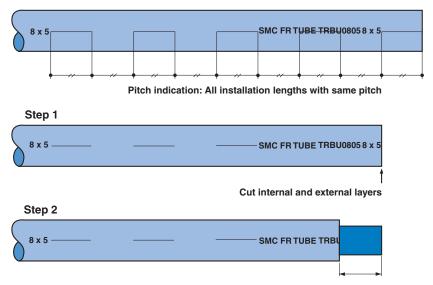

# **Example:**

**TRBU 1208 W** — **100** - Nominal diameter is 12mm and overall outside diameter is 14mm when outer layer is included. Requires a 12mm One-Touch® fitting.

# **Instructions**

Locate the cut markings on the tubing. The cut markings are represented by simple dashes. The length of a dash as well as the distance between dashes represent the correct stripping length.

- Cut the tubing on one of the cut markings. Cut through both inner tubing as well as outer layer.
- **2.** Strip off outer layer using the cut markings as guidance.
- 3. Install tubing in One-Touch™ fitting

Strip off external layer only

# Series TM Multiple Tubing Holder

Can be separated at any position depending on the number of tubes. Manufactured from flame resistant resin (Equivalent to UL-94 Standards V-0).

#### **How To Use**

# ⚠ Caution

The multiple tubing holder can be cut apart according to the number of tubes to be connected.

- Cut the multiple tubing holder at a desired position and mount it on the equipment with the attached phillips countersunk tapping screws.
- **3.** Align the tube with the holding position and push down to fit into the holding part.
- **4.** Pull tubing up to remove it from the holder.

# Series TG Tube Releasing

| Part No. | Applicable Tube Size |              | Applicable Tube Material | Color | Weight |
|----------|----------------------|--------------|--------------------------|-------|--------|
| TG-1     | Metric size          | ø4, ø6       | Nylon, Soft Nylon        | Blue  | 33g    |
| TG-2     | Inch size            | ø1/8", ø1/4" | Polyurethane             | Red   | Josy   |

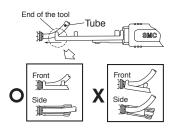

- ▲ Aids in the connection and removal of tubing in applications where One-touch™ fittings are located close together, such as on a valve manifold.
- Easy one handed operation.
- Available for two sizes of applicable tubes. Easy exchange with one touch.

#### How To Use

# $ilde{\mathbb{M}}$ Caution

#### Process

Put the end of tool into the release bushing parallel to the tube.

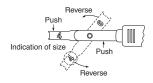

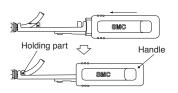

After inserting, grasp the handle tightly and insert the end of the tube to the stroke end.

Note) Insert firmly to guard against accidental tube release.

Size Change

Push both sides at once to release. Reversed and fixed at the same position as before. Applicable tube size is indicated on the back side.

After inserting end of tube, relax your grip on the tool. Returning force of spring releases the tube.

# Series TK, TKS, TB-3VS

# **Tubing Cutters**

**TK-1** 

Applicable tubing O.D.: 13mm or less.

**TK-2** 

Applicable tubing O.D.: 18mm or less.

#### TK-3 (Simple type)

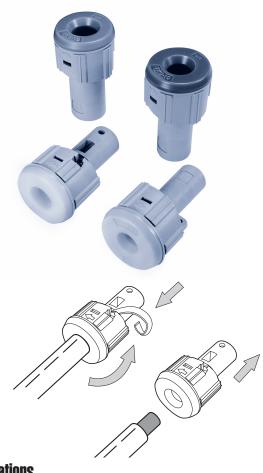

Applicable tubing O.D.: 12mm or less.

# **Double Layer Tubing Stripper**

**Series TKS** 

Allows the outer layer of SMC's double layer tubing to be stripped off easily.

#### **Variations**

| Model  | Tip Color | Applicable Tubing* |
|--------|-----------|--------------------|
| TKS-06 | Orange    | TRB0604,TRBU0604   |
| TKS-08 | Yellow    | TRB0806, TRBU0805  |
| TKS-10 | Blue      | TRB1075, TRBU1065  |
| TKS-12 | Green     | TRB1209, TRBU1208  |

<sup>\*</sup> Inner tubing material / TRB: soft nylon, TRBU: Polyurethane

# **Vertical Tubing Stand Series TB-3VS**

Dimensions: 37-1/4" w x 27-9/16" d x 68-11/16" h

Designed for high capacity and reel size flexibility. This stand comes with two cross bars. A third cross bar can be ordered separately (TB-3CB).

# This chart does not apply to soft Nylon tubing

# This chemical resistance chart is meant to be used as a guideline only.

Due to variables such as temperature and chemical mixture, it is essential to test under actual conditions.

# This chemical resistance chart is meant to be used as a guideline only.

Due to variables such as temperature and chemical mixture, it is essential to test under actual conditions.

| Category                              | Concentration | Test<br>Temperature |               |

 $\textbf{(Note)} \bullet : \textbf{No change}; \bigcirc : \textbf{Resistance for practical use}; \triangle : \textbf{Gradually deteriorated}; \textbf{X} : \textbf{Deteriorated (21 days immersion)}$ 

# This chemical resistance chart is meant to be used as a guideline only.

Due to variables such as temperature and chemical mixture, it is essential to test under actual conditions.

# **Safety Instructions**

These safety instructions are intended to prevent a hazardous situation and/or equipment damage. These instructions indicate the level of potential hazard by a label of "Caution", "Warning" or "Danger". To ensure safety, be sure to observe ISO 4414<sup>Note 1)</sup>, JIS B 8370<sup>Note2)</sup> and other safety practices.

Caution: Operator error could result in injury or equipment damage

Warning: Operator error could result in serious injury or loss of life

Danger: In extreme conditions, there is a possible result of serious injury or loss of life

Note 1) ISO 4414: Pneumatic fluid power - Recommendations for the application of equipment to transmission and control systems.

Note 2) JIS B 8370: General Rules for Pneumatic Systems.

1. The compatibility of pneumatic equipment is the responsibility of the person who designs the pneumatic system or decides its specifications.

Since the products specified here are used in various operating conditions, their compatibility for the specific pneumatic system must be based on specifications or after analysis and/or tests to meet your specific requirements.

2. Only trained personnel should operate pneumatically operated machinery and equipment.

Compressed air can be dangerous if an operator is unfamiliar with it. Assembly, handling or repair of pneumatic systems should be performed by trained and experienced operators.

- 3. Do not service machinery/equipment or attempt to remove components until safety is confirmed.
  - 1. Inspection and maintenance of machinery/equipment should only be performed after confirmation of safe locked-out control positions.
  - 2. When equipment is to be removed, confirm the safety process as mentioned above. Cut the supply pressure for this equipment and exhaust all residual compressed air in the system.
  - 3. Before machinery/equipment is re-started, take measures to prevent shooting-out of the cylinder piston rod etc. (Bleed air into the system gradually to create back-pressure.)
- 4. Contact SMC if the product is to be used in any of the following conditions:
  - 1. Conditions and environments beyond the given specifications, or if product is used outdoors.
  - 2. Installation on equipment in conjunction with atomic energy, railway, air navigation, vehicles, medical equipment, food and beverages, recreation equipment, emergency stop circuits, press applications, or safety equipment.
  - 3. An application which has the possibility of having negative effects on people, property, or animals, requiring special safety analysis.

# **Tubing Precautions**

# Please read before handling

#### Selection

# $\hat{m{\Lambda}}$ Warning

1. Confirm the specifications

The products appearing in this catalog are designed for use only in compressed air systems (Including vacuum).

Do not use outside the specified ranges of pressure, temperature, etc., as this may cause damage or malfunction (Refer to specifications).

#### **Caution**

1. Use tubing at or above the minimum bend radius. Using below the minimum bend radius can cause breakage or kinking of the tube.

#### **Mounting**

#### 🗥 Caution

- 1. Before mounting confirm the model and size, etc. Also confirm that there are no blemishes, nicks or cracks in the product.
- 2. When connecting tubing, consider factors such as changes in the tubing length due to pressure and allow sufficient
- **3.** Mount so that fittings and tubing are not subjected to twisting, pulling or moment loads. This can cause damage to fittings and kinking, bursting or disconnection of tubing, etc.
- 4. Mount so that tubing is not damaged due to tangling or abrasion. This can cause kinking, bursting or disconnection of tubing, etc.

#### **Applications**

# riangle Warning

1. Refer to chemical resistance charts

#### **Operating Environment**

# 🗥 Warning

- 1. Do not use ordinary fittings and tubing in locations where static electric charge will cause a problem. This can cause defects or failure of the system, etc. In this kind of location, the use of antistatic fittings (Series KA) and antistatic tubing (Series TA) is recommended.
- 2. Do not use ordinary One-touch fittings in locations where spatter is generated. There is a danger of spatter causing a fire. In this kind of location, the use of flame resistant fittings (Series KR, KRM) and flame resistant tubing (Series TRS, TRB, TRBÚ) is recommended.

#### **Maintenance**

# 🕂 Caution

- 1. Make periodic inspections to check for the following problems, and replace parts as necessary
  - A) Blemishes, nicks, abrasions, corrosion
  - B) Air leakage
  - C) Twisting, kinking or tangling of the tubing
  - D) Hardening, deterioration or softening of the tubing

# **Packaging Options**

SMC tubing is sold in 3 basic packages:

#### Bag Dispenser Box Reel

The quantity, diameter and type of the tubing ordered defines the type of package used. The standard package option is indicated in the catalog on the appropriate product page.

SMC recognizes the need for alternative packaging options. Please contact a SMC representative for help with your request.

# **Tubing Length Other Than Indicated In Catalog**

Please contact a SMC representative for information regarding this request. SMC will strive to meet your requirements.

# **Splicing Policy**

SMC does not splice tubing.

# **Custom Marking on Tubing**

Please contact a SMC representative for information regarding this request.

# **Hardness Comparison for Thermoplastics**

# **Color Chart for Polyurethane Tubing**
