# Circulating Fluid Temperature Controller Thermo-chiller

## **HRS** Series

## **Standard Type**

Compatible
with power supplies
in Europe, Asia,
Oceania, and North, Central,
and South America

Single-phase 100 VAC (50/60 Hz), 115 VAC (60 Hz)

 Single-phase 200 to 230 VAC (50/60 Hz)

#### With heating function

As the heating method uses discharged heat, a heater is unnecessary.

#### Convenient functions

Timer operation function/Unit conversion function/Power failure auto-restart function/Anti-freezing operation function

#### Easy maintenance

Toolless maintenance of filter

## Self-diagnosis function and check display

35 types of alarm codes

#### Communication function

Equipped with serial communication (RS232C/RS485) and contact I/Os (2 inputs and 3 outputs) as standard

Environmentally friendly R407C R410A as refrigerant

# Temperature stability $\pm 0.1^{\circ}\text{C}$ / Compact

A precision temperature control method which utilizes expansion valves and temperature sensors allowed for the realization of a product with a high temperature stability of  $\pm 0.1$ °C and a small-size tank.

#### ■ Air-cooled HRS□-A-□

#### ■ Water-cooled HRS□-W-□

#### Refrigeration circuit

- The compressor compresses the refrigerant gas and discharges high-temperature, high-pressure refrigerant gas.
- In the case of air-cooled refrigeration, the high-temperature, high-pressure refrigerant gas is cooled down by fan ventilation in the air-cooled condenser, where it is then liquefied. In the case of water-cooled refrigeration, the refrigerant gas is cooled by the facility water in the facility water circuit in the water-cooled condenser, where it is then liquefied.
- The liquefied high-pressure refrigerant gas expands and its temperature lowers when it passes through expansion valve A, where it vaporizes after receiving heat from the circulating fluid in the evaporator.
- The vaporized refrigerant gas is sucked into the compressor and compressed again.
- When heating the circulating fluid, the high-pressure, hightemperature refrigerant gas is bypassed into the evaporator by expansion valve B to heat the circulating fluid.

Point The combination of the precise control of expansion valve A for cooling and expansion valve B for heating allows for high temperature stability.

#### Circulating fluid circuit

- After the circulating fluid discharged from the pump is heated or cooled by the user's equipment, it returns to the thermo-chiller.
- The circulating fluid is controlled to remain at a set temperature by the refrigeration circuit. It will then be discharged to the user's equipment side again by the thermo-chiller.

Point

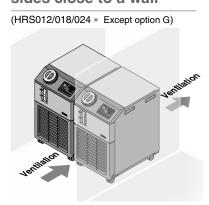

Since the refrigeration circuit is controlled by the signals from 2 temperature sensors (for return and discharge), precise temperature control of the circulating fluid can be achieved. Therefore, there is no need for a tank with a large capacity to absorb the circulating fluid temperature difference, as high temperature stability can be achieved even with a small-size tank. This also contributes to space saving.

#### Facility water circuit

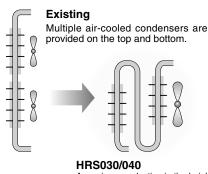

#### For water-cooled refrigeration HRS□-W-□

 The water-regulating valve opens and closes to keep the refrigerant gas pressure consistent. The facility water flow rate is controlled by the water-regulating valve.

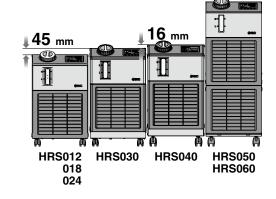

# Can be installed with both sides close to a wall

#### Reduced-height double condenser structure (HRS030/040/060)

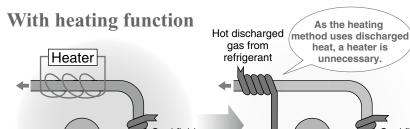

# A maximum reduction in the height of the product has been achieved while expanding the cooling capacity by providing overlapped air-cooled condensers.

**■ •** •

RUN

Temperature increase with the heating function Circulating fluid temperature [°C] 10 20 30 Time [min]

> A heater is not required even when the ambient temperature is low.

#### Simple operation

\* This is just an example diagram.

Compressor

Step Press the key.

Step 2 Adjust the temperature setting with the ▼ / ▲ keys.

Step 3 Press the RUN/ STOP key to stop operation. Easy operation

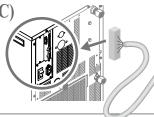

The large digital display (7-segment and 4 digits) and 2-row display provide a clearer view of the current value (PV) and set value (SV).

03

#### Power supply (24 VDC) available

Power can be supplied from the connector on the rear side of the HRS to external switches, etc.

Refer to the Web Catalog for details.

#### **Variations**

#### Reduced maintenance hours for the pump

#### Now with a magnet pump\*1

Due to the adoption of a sealless pump, no external leakage of the circulating fluid occurs. Also, periodic checking for pump leakage and replacement of the mechanical seal are not necessary.

\*1 For products with the high-pressure pump option and for the HRS050/060, a mechanical seal pump is used.

magnetic

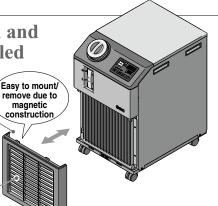

#### Toolless inspection and cleaning of air-cooled condenser

#### **Dustproof filter**

performed with ease.

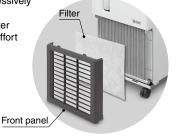

Integrated with the grill of the front panel Mounting and removal can be

Easy to remove dust, cutting chips, etc., stuck to the dustproof net with a brush or air blow

Suitable for use in excessively dusty atmospheres The disposable type filter reduces the time and effort required for cleaning.

#### Particle filter set (p. 64) Removes foreign matter in the circulating fluid Effective in preventing foreign matter from entering the user's equipment and chiller Prevents pump malfunction Prevents the water-cooled condenser performance from falling

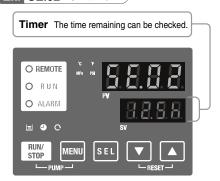

#### Convenient functions (Refer to the Operation Manual for details.)

#### ■ Timer operation function

Timer for ON and OFF can be set in units of 0.5 h up to 99.5 h.

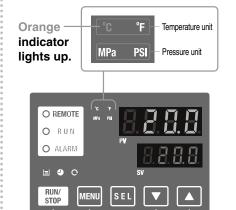

Ex.) Can be set to stop on Saturday and Sunday and restart on Monday morning

#### Ex. SE.02 "ON timer"

#### Unit conversion function

Temperature and pressure units can be changed.

#### ■ Power failure auto-restart function

Automatic restart after stoppage due to power failure, etc., is possible without pressing the RUNY key, and remote operation is also possible.

#### Anti-freezing operation function

If the circulating fluid approaches its freezing point, for example, on a cold winter night, the pump operates automatically, and the heat generated by the pump warms the circulating fluid, preventing freezing.

#### Key-lock function

Can be set in advance to protect the set values from being changed by pressing keys by mistake.

Function to output a signal for completion of preparation Notifies by communication when the temperature reaches the pre-set temperature range

#### ■ Independent operation of the pump

The pump can be operated independently while the chiller is powered off. This allows you to check for leakages in piping and to remove the air.

Display of 35 types of alarm codes For details, refer to page 50.

Operation is monitored at all times by the integrated sensor.

Self-diagnosis function and check display

Should any error occur, the self-diagnosis result is displayed by the applicable alarm code (35 types).

This makes it easier to identify the cause of the alarm.

Can be used before requesting service

#### Changeable alarm set values

Setting item	Set value
Circulating fluid discharge temperature rise	5 to 48°C
Circulating fluid discharge temperature drop	1 to 39°C
Circulating fluid discharge pressure rise	0.05 to 0.75 MPa*1
Circulating fluid discharge pressure drop	0.05 to 0.18 MPa*1

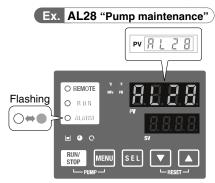

<sup>\*1</sup> Set values vary depending on the model.

#### Alarm codes can be used for the notification of upcoming recommended maintenance.

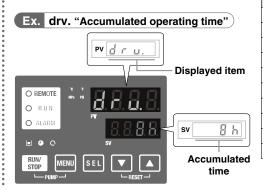

The codes notify you when it's time to check the pump and fan motor. Helpful for facility maintenance

\* A fan motor is not used in water-cooled refrigeration.

#### Check display

The internal temperature, pressure, and operating time of the product are displayed.

Displayed item Circulating fluid outlet temperature Circulating fluid return temperature Compressor gas temperature Circulating fluid outlet pressure Compressor gas discharge pressure Compressor gas return pressure Accumulated operating time Accumulated operating time of pump Accumulated operating time of fan motor\*1 Accumulated operating time of compressor

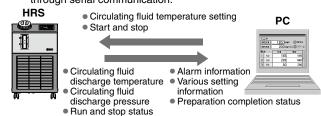

\*1 These are displayed only for air-cooled refrigeration.

#### Communication function

Serial communication (RS232C/RS485) and contact I/Os (2 inputs and 3 outputs) are equipped as standard. This allows for communication with the user's equipment and system construction, depending on the application. A 24 VDC output can be also provided and is available for use with flow switches (SMC's PF2W, etc.).

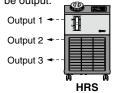

#### Ex. 1) Remote signal I/O through serial communication

Remote operation is enabled (to start and stop operation) through serial communication.

#### Ex. 3 Alarm and operation status (start, stop, etc.) signal output

The alarm and status generated in the product are assigned to 3 output signals based on their contents, which can then be output.

Output setting example

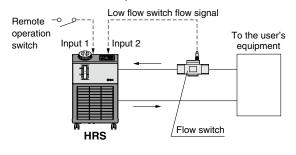

Output 1: Temperature rise Output 2: Pressure rise

Output 3: Operation status

(start, stop, etc.)

#### Ex. 2 Remote operation signal input

One of the contact inputs is used for remote operation and the other is used to monitor the flow of a flow switch. This is where their alarm outputs are taken in.

Power for flow switches (24 VDC) can be supplied by the thermo-chiller.

#### Global Supply Network

#### SMC has a comprehensive network in the global market.

We now have a presence of more than 560 branch offices and distributors in 83 countries and regions worldwide, such as Asia, Oceania, North/Central/South America, and Europe. With this global network, we are able to provide a global supply of our substantial range of products and high-quality customer service. We also provide full support to local factories, foreign manufacturing companies, and Japanese companies in each country.

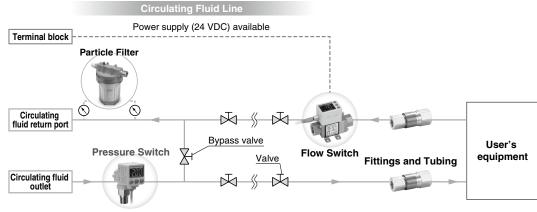

#### **SMC Thermo-chiller Variations**

Lots of variations are available according to the users' requirements.

- \*1 No condensation should be present.
- \*2 If tap water is used, use water that is compliant with the Water Quality Standards of the Japan Refrig-eration and Air Conditioning Industry Association (JRA GL-02-1994 cooling water system circulating
- type make-up water). Refer to "Specific Product Precautions" for other usable circulating fluids.

  \*3 ① Ambient temperature: 25°C, ② Circulating fluid temperature: 20°C, ③ Circulating fluid at the rated flow, ④ Circulating fluid: Tap water Refer to the cooling capacity and heating capacity graphs on pages 39 to 43 for details.
- \*4 Use a 15% ethylene glycol aqueous solution if operating in a place where the circulating fluid temperature is 10°C or less.
- \*5 Temperature at the thermo-chiller outlet when the circulating fluid flow is at the rated flow and the circulating fluid outlet and return port are directly connected. The installation environment and power supply are within the specification range and stable.
- \*6 The capacity at the thermo-chiller outlet when the circulating fluid temperature is 20°C
- The required minimum flow rate for maintaining the cooling capacity or temperature stability. The specification of the cooling capacity and the temperature stability may not be satisfied if the flow rate is lower than the rated flow. (In such a case, use a bypass piping set (sold separately).) Purchase an earth leakage breaker with a sensitivity current of 30 mA separately.
- (A product with an optional earth leakage breaker (option B) is also available.)

  \*9 Front: 1 m, height: 1 m, stable with no load, Other conditions → See \*3.
- \*10 Weight in the dry state without circulating fluids \*11 It is not provided for the HRS050/060.
- \*12 It is not provided for the HRS040/050/060.
  \*13 If the product is used at an altitude of 1000 m or higher, refer to "Operating Environment/Storage Environment" (page 72) Item 14 "For altitudes of 1000 m or higher."

#### HRS050- A -20 (Single-phase 200 to 230 VAC)

### **⚠** Caution

#### Mechanical Seal Pump

The pump used for the thermo-chiller HRS050/060 series uses a mechanical seal with the fixed ring and rotary ring used for the shaft seal part. If foreign matter enter the gap between the seals, this may cause a trouble such as leakage from the seal part or pump lock. Therefore, it is strongly recommended to install the particle filter in the return piping of the chiller.

<sup>\*1</sup> The length of HRS-CA $\square\square$  is 3 m.

The basic operation of this unit is controlled through the operation display panel on the front of the product.

No.	Description	Function			
(1)	Digital display	PV Displays the circulating fluid current discharge temperature and pressure and alarm codes and other menu items (codes).			
	(7-segment, 4 digits)	SV Displays the circulating fluid discharge temperature and the set values of other menus.			
2	[°C] [°F] lamp	Equipped with a unit conversion function. Displays the unit of display temperature (default setting: °C).			
3	[MPa] [PSI] lamp	Equipped with a unit conversion function. Displays the unit of display pressure (default setting: MPa).			
4	[REMOTE] lamp	Enables remote operation (start and stop) by communication. Lights up during remote operation.			
5	[RUN] lamp	ghts up when the product is started, and goes off when it is stopped. Flashes during stand-by for stop or nti-freezing function, or independent operation of the pump.			
6	[ALARM] lamp	lashes with buzzer when alarm occurs.			
7	[ 🖃 ] lamp	Lights up when the surface of the fluid level indicator falls below the L level.			
8	[ <b>4</b> ] lamp	Equipped with a timer for start and stop. Lights up when this function is operated.			
9	[ O ] lamp	Equipped with a power failure auto-restart function, which restarts the product automatically after stopped due o a power failure, is provided. Lights up when this function is operated.			
10	[RUN/STOP] key	Makes the product start or stop.			
11)	[MENU] key	Shifts the main menu (display screen of circulating fluid discharge temperature and pressure) and other menus for monitoring and entry of set values).			
12	[SEL] key	Changes the item in menu and enters the set value.			
13	[▼] key	Decreases the set value.			
14)	[▲] key	Increases the set value.			
15	[PUMP] key	Press the [MENU] and [RUN/STOP] keys simultaneously. The pump starts running independently to make the product ready for start-up (release the air).			
16	[RESET] key	Press the [▼] and [▲] keys simultaneously. The alarm buzzer is stopped and the [ALARM] indicator is reset.			

#### **Alarm**

This unit has 35 types of alarms as standard, and displays each of them by its alarm code on the PV screen with the [ALARM] lamp ([LOW LEVÉL] lamp) lit up on the operation display panel. The alarm can be read out through communication.

Alarm code	Alarm message	Operation status
AL01	Low level in tank	Stop*1

Item		Specifications			
Connector type (to the product/to the socket (Accessory))		MC1,5/12-GF-3,5 / MC1,5/12-STF-3,5 (made by PHOENIX CONTACT)			
Insulation method		Photocoupler			
Input signal	Rated input voltage	24 VDC			
	Operating voltage range	21.6 VDC to 26.4 VDC			
	Rated input current	5 mA TYP			
	Input impedance	4.7 kΩ			
Contact output	Rated load voltage	48 VAC or less/30 VDC or less			
signal	Maximum load current	500 mA AC/DC (Resistance load)			
Signai	Minimum load current	5 VDC 10 mA			
Out	put voltage	24 VDC ±10% 0.5 A MAX			
Circuit diagram		To the thermo-chiller  User's equipment side  24 VDC output 24 VCOM output  24 VCOM output  4.7 kΩ  9  Not set when shipping from factory  Operation status signal  Alarm signal  Alarm signal  Vser's equipment side  24 VDC output  24 VCOM output  24 VCOM output  Comparison of the time of shipment from the factory*  (Users can modify the settings.)			

- \*1 The pin numbers and output signals can be set by the user. For details, refer to the Operation Manual.
- \*2 When using with optional accessories, depending on the accessory, the allowable current of 24 VDC devices will be reduced. Refer to the operation manual of the optional accessories for details.

#### **Serial Communication**

The serial communication (RS-485/RS-232C) enables the following items to be written and read out.

For details, refer to the Operation Manual for communication.

# Run/Stop Circulating fluid temperature setting (SV)

# Circulating fluid present temperature Circulating fluid discharge pressure Electric resistance \*1 Status information Alarm occurrence information

\*1 When the optional accessory, "electric resistance sensor set" is used.

Item	Specifications				
Connector type	D-sub 9-pin, Female connector (Mounting screw: M2.6 x 0.45)				
Protocol	Modicon Modbus compliant/S	imple communication protocol			
Standards	EIA standard RS-485	EIA standard RS-232C			
Circuit diagram	To the thermo-chiller User's equipment side	To the thermo-chiller User's equipment side			

<sup>\*</sup> The terminal resistance of RS-485 (120 Ω) can be switched by the operation display panel. For details, refer to the Operation Manual. Do not connect other than in the way shown above, as it can result in failure.

**HRS** Series **Options** 

Options have to be selected when ordering the thermo-chiller. It is not possible to add them after purchasing the unit.

## Option symbol

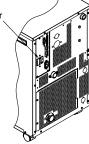

#### With Earth Leakage Breaker

With earth leakage breaker

Earth leakage breaker

In the event of a short circuit, overcurrent or overheating, the earth leakage breaker will automatically shut off the power supply.

Applicable model	HRS012/018-□□-10-B	HRS012/018/024/030-□□-20-B	HRS040-□□-20-B HRS050-□□-20-B HRS060-W□-20-B	HRS060-A□-20-B
Rated current sensitivity [mA]	30	30	30	30
Rated shutdown current [A]	15	10	20	30
Short circuit display method	Mechanical button			

#### Option symbol

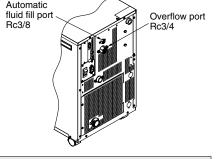

#### With Automatic Fluid Fill Function

#### With automatic fluid fill function

By installing this at the automatic fluid fill port, the circulating fluid can be automatically supplied to the product using a built-in solenoid valve for a fluid fill while the circulating fluid is decreasing.

Applicable model	HRS012/018/024/030/040/050/060-□□-□-J
Fluid fill method	Built-in solenoid valve for automatic fluid fill
Fluid fill pressure [MPa]	0.2 to 0.5

\* When the option, with automatic fluid fill function, is selected, the weight increases by 1 kg.

#### pplicable to Deionized Water Piping

#### Applicable to deionized water piping

Contact material of the circulating fluid circuit is made from non-copper materials.

Select this when using deionized water with a conductivity of 1 MΩ-cm or more (1 μs/cm or less).

Applicable model	HRS012/018/024/030/040/050/060-□□-□-M
Contact material for circulating fluid	Stainless steel (including heat exchanger brazing), Alumina ceramic, SiC, Carbon, PP, PE, POM, FKM, NBR, EPDM, PVC

No change in external dimensions

#### Option symbol

#### High-Pressure Pump Mounted

□□-□□- T /MT

#### High-pressure pump mounted

Possible to choose a high-pressure pump in accordance with user's piping resistance. Cooling capacity will decrease by heat generated in the pump.

#### \* The HRS050/060 cannot be selected.

	Applicable model		HRS012/018-□□-10-T/MT	HRS012/018/024/030-□□-20-T	HRS012/018/024/030-□□-20-MT*1	HRS040-□□-20-T/MT

#### HRS030-□□-20-T

#### HRS040-□□-20-T/MT

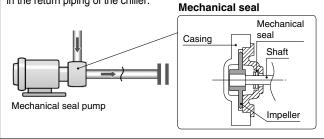

53

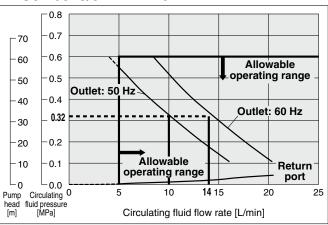

#### **⚠** Caution

#### **Mechanical Seal Pump**

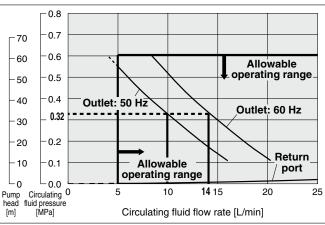

The pump used for the option T/MT of the thermo-chiller HRS012 to 040 uses a mechanical seal with the fixed ring and rotary ring used for the shaft seal part. If foreign matter enter the gap between the seals, this may cause a trouble such as leakage from the seal part or pump lock. Therefore, it is strongly recommended to install the particle filter in the return piping of the chiller.

#### HRS012/018/024-□□-20-MT

#### HRS030-□□-20-MT

HRR

\* Options have to be selected when ordering the thermo-chiller. It is not possible to add them after purchasing the unit.

The circulating fluid temperature and pressure are displayed in SI units [MPa/°C] only. If this option is not selected, a product with a unit selection function will be provided by default.

\* No change in external dimensions

#### Option symbol

#### **High-Temperature Environment Specification**

HRS....-- A ...-20 - G

High-temperature environment specification

Applicable model	HRS012/018/024-A□-20-G
Cooling method	Air-cooled refrigeration
Power supply	Single-phase 200 to 230 VAC (50/60 Hz)

\* No change in external dimensions

\* The HRS030/040/050/060 cannot be selected.

This product makes use at ambient temperatures of up to  $45^{\circ}\text{C}$  possible.

Also increases cooling capacity at ambient temperature of 32°C. (Cooling capacity is equal to standard products at ambient temperatures of less than 32°C.)

\* Ventilation slots are added to thermo-chiller side panels. For this reason, please provide 300 mm of ventilation space next to the side panels (do not install with sides touching walls).

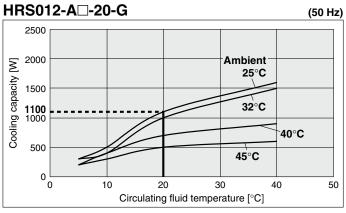

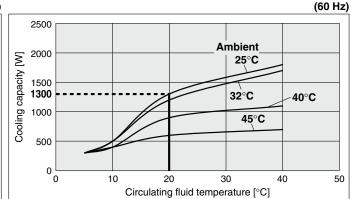

Ventilation slots are added to side panels (on both sides).

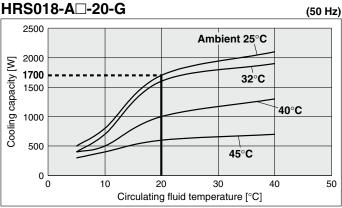

\* If the product is used at an altitude of 1000 m or higher, refer to "Operating Environment/Storage Environment" (page 72) Item 14 "For altitudes of 1000 m or higher."

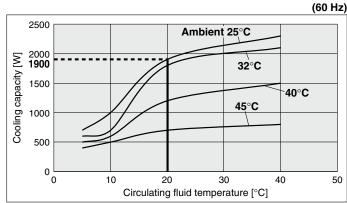

#### **Cooling Capacity**

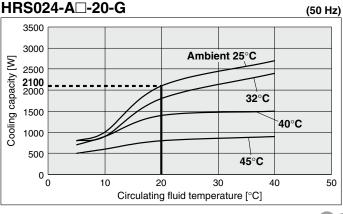

\* For models with a high-pressure pump mounted (-T), the cooling capacity will decrease by about 300 W from each graph.

#### 2 Piping Conversion Fitting (For Air-Cooled Refrigeration)

■ Conversion fitting for circulating fluid + Conversion fitting for drain outlet HRS012-A□-□, HRS018-A□-□, HRS024-A□-□, HRS030-A□-□, HRS040-A□-□

This fitting changes the port size for circulating fluid from Rc1/2 to G1/2 or NPT1/2, and for drain from Rc3/8 to G3/8 or NPT3/8. It is not necessary to purchase this when pipe thread type F or N is selected in "How to Order" since it is included in the product.

	Applicable model	
		HRS012-A-□
	G thread conversion fitting set	HRS018-A-□
		HRS024-A-□
	NPT thread conversion fitting set	HRS030-A-□
	The Transaction region inting set	HRS040-A-□

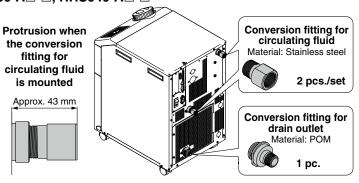

When the options, with automatic fluid fill function "-J", or high-pressure pump mounted "-T" are selected, purchase  $\ 3$  piping conversion fitting (for option), too.

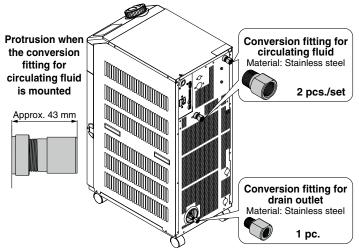

#### HRS050-A□-□, HRS060-A□-□

This fitting changes the port size for circulating fluid from Rc1/2 to G1/2 or NPT1/2, and for drain from Rc1/4 to G1/4 or NPT1/4. It is not necessary to purchase this when pipe thread type F or N is selected in "How to Order" since it is included in the product.

	Applicable model	
HRS-EP009	G thread conversion fitting set	HRS050-A-□
HRS-EP010	NPT thread conversion fitting set	HRS060-A-□

When the option, with automatic fluid fill function "-J", is selected, purchase ③ piping conversion fitting (for option), too.

#### ② Piping Conversion Fitting (For Water-Cooled Refrigeration)

#### ■ Conversion fitting for circulating fluid + Conversion fitting for facility water + Conversion fitting for drain outlet HRS012-W□-□, HRS018-W□-□, HRS024-W□-□, HRS030-W□-□, HRS040-W□-□

This fitting changes the port size for circulating fluid from Rc1/2 to G1/2 or NPT1/2, for facility water from Rc3/8 to G3/8 or NPT3/8, and for drain from Rc3/8 to G3/8 or NPT3/8. It is not necessary to purchase this when pipe thread type F or N is selected in "How to Order" since it is included in the product.

	Applicable model	
HRS-EP003	G thread conversion fitting set	HRS012-W-□ HRS018-W-□ HRS024-W-□
HRS-EP004	NPT thread conversion fitting set	HRS030-W-□ HRS040-W-□

When the options, with automatic fluid fill function "-J", or high-pressure pump mounted "-T" are selected, purchase 3 piping conversion fitting (for option), too.

#### HRS050-W□-□, HRS060-W□-□

This fitting changes the port size for circulating fluid or facility water from Rc1/2 to G1/2 or NPT1/2 and for drain from Rc1/4 to G1/4 or NPT1/4.

It is not necessary to purchase this when pipe thread type F or N is selected in "How to Order" since it is included in the product.

	Applicable model	
HRS-EP011	HRS050-W-□	
HRS-EP012	NPT thread conversion fitting set	HRS060-W-□

When the option, with automatic fluid fill function "-J", is selected, purchase 3 piping conversion fitting (for option), too.

#### Conversion fitting for circulating fluid Material: Stainless steel Protrusion when 2 pcs./set the conversion Conversion fitting for fitting for facility facility water Material: Stainless steel water is mounted Approx. 37 mm 2 pcs./set Conversion fitting for drain outlet Material: POM 1 pc. Conversion fitting for circulating fluid Material: Stainless steel Protrusion when 2 pcs./set the conversion Conversion fitting for fitting for facility facility water water is mounted Material: Stainless steel Approx. 37 mm 2 pcs./set Conversion fitting for drain outlet Material: Stainless steel 1 pc.

#### ③ Piping Conversion Fitting (For Option)

#### ■ Conversion fitting for automatic fluid fill port

This fitting changes the port size for the option, with automatic fluid fill function "-J" from Rc3/8, Rc3/4 to G3/8, G3/4 or NPT3/8, NPT3/4.

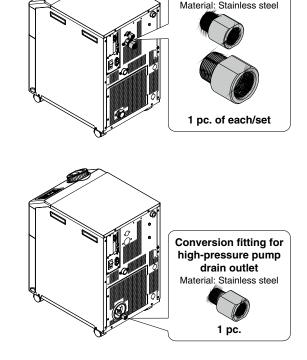

It is not necessary to purchase this when pipe thread type F or N is selected in "How to Order" since it is included in the product.

#### **5** Bypass Piping Set

When the circulating fluid goes below the rated flow (7 L/min for the HRS012, 018, 024, 030 and 23/28 L/min for the HRS040, 050, 060), cooling capacity will be reduced and the temperature stability will be badly affected. In such a case, use the bypass piping set. A high-pressure pump is also available.

## **HRS** Series

## 7 DI Filter Set

It is possible to retain the level of electric resistance and electric conductivity by flowing the circulating through the ion replacement resin (DI filter). The set parts are in order to install DI filter to bypass circuit and flow the fixed rate of the circulating fluid to DI filter. It is not to control the value of electric resistance and electric conductivity. (Replacement cartridge: HRS-DF001)

#### ■ Stainless steel type

Suitable for locations with dusty atmospheres.

#### Parte I iet

## 13 Analog Gateway Unit

This is an expansion unit for adding analog communication functions.

"Analog communication, contact input/output" functions can be used.

#### ● Analog communication

The set circulating fluid temperature can be changed by entering the analog voltage.

Converts the current circulating fluid temperature and current electric resistance value (\*1) to an analog voltage for output.

\*1 Displayed when optional "Electric resistance sensor set/HRS-DI001, DI003, DI004, and DI005" are used.

#### Contact input/output

The Run/Stop of the thermo-chiller HRS series can be operated by a contact signal.

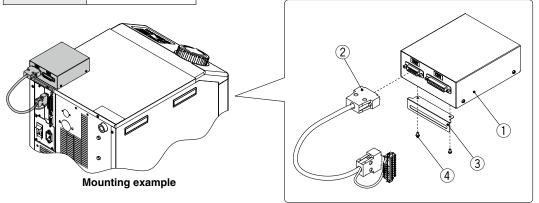

The contact signal of the operation status, alarm occurrence status and the TEMP READY status can also be output.

Part no.	Applicable model	
	HRS012-□□-□ HRS018-□□-□ HRS024-□□-□	
HRS-CV001	HRS030-□□-□ HRS040-□□-□

Material	Stainless steel 304, Stainless steel 316
Mesh size	200

Optional Accessories **HRS Series** 

# **HRS** Series

# **Cooling Capacity Calculation**

## **Required Cooling Capacity Calculation**

#### Example 1: When the heat generation amount in the user's equipment is known.

The heat generation amount can be determined based on the power consumption or output of the heat generating area — i.e. the area requiring cooling — within the user's equipment.\*1 I: Current

① Derive the heat generation amount from the power consumption.

Power consumption P: 1000 [W]

Q = P = 1000 [W]

Cooling capacity = Considering a safety factor of 20%,

1000 [W] x 1.2 = 1200 [W]

② Derive the heat generation amount from the power supply output.

Power supply output VI: 1.0 [kVA]

 $Q = P = V \times I \times Power factor$ 

In this example, using a power factor of 0.85:

$$= 1.0 [kVA] \times 0.85 = 0.85 [kW] = 850 [W]$$

Cooling capacity = Considering a safety factor of 20%,

850 [W] x 1.2 = 1020 [W]

P

Power

V: Power

supply voltage

Q: Heat generation

User's equipment

$$Q = P = \frac{W}{Efficiency}$$

In this example, using an efficiency of 0.7:

Example of conventional units (Reference)

Output (shaft power, etc.) W: 800 [W]

$$=\frac{800}{0.7}=1143$$
 [W]

Cooling capacity = Considering a safety factor of 20%,

\*1 The examples above calculate the heat generation amount based on the power consumption. The actual heat generation amount may differ due to the structure of the user's equipment. Be sure to check it carefully.

## Example 2: When the heat generation amount in the user's equipment is not known.

Obtain the temperature difference between inlet and outlet by circulating the circulating fluid inside the user's equipment.

Heat generation amount by user's equipment Q: Unknown [W] ([J/s]) Circulating fluid : Tap water\*1 Circulating fluid mass flow rate qm :  $(= \rho \times qv \div 60) [kg/s]$ Circulating fluid density of : 1 [kg/dm<sup>3</sup>] Circulating fluid (volume) flow rate qv : 10 [dm<sup>3</sup>/min] Circulating fluid specific heat C : 4.2 x 10<sup>3</sup> [J/(kg·K)] Circulating fluid outlet temperature T1 : 293 [K] (20 [°C]) Circulating fluid return temperature T2 : 295 [K] (22 [°C]) Circulating fluid temperature difference  $\Delta T$ : 2.0 [K] (= **T**2 - **T**1) Conversion factor: minutes to seconds (SI units): 60 [s/min]

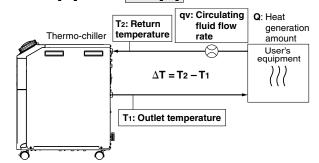

\*1 Refer to page 70 for the typical physical property value of tap water or other circulating fluids.

$$Q = q_m \times C \times (T_2 - T_1)$$

$$= \frac{\rho \times q_{V} \times C \times \Delta T}{60} = \frac{1 \times 10 \times 4.2 \times 10^{3} \times 2.0}{60}$$

 $= 1400 [J/s] \approx 1400 [W]$ 

Cooling capacity = Considering a safety factor of 20%,

#### Heat generation amount by user's equipment Q: Unknown [cal/h] $\rightarrow$ [W] Circulating fluid : Tap water\*1 : (= $\rho x qv x 60$ ) [kgf/h] Circulating fluid weight flow rate qm : 1 [kgf/L] Circulating fluid weight volume ratio $\gamma$ Circulating fluid (volume) flow rate qv : 10 [L/min] : 1.0 x 10<sup>3</sup> [cal/(kgf.°C)] Circulating fluid specific heat C Circulating fluid outlet temperature T1 : 20 [°C] Circulating fluid return temperature T2 : 22 [°C] Circulating fluid temperature difference $\Delta T$ : 2.0 [°C] (= T<sub>2</sub> - T<sub>1</sub>) Conversion factor: hours to minutes : 60 [min/h] Conversion factor: kcal/h to kW : 860 [(cal/h)/W] qm x C x (T2 - T1) $\gamma$ x qv x 60 x C x $\Delta$ T 860 $1 \times 10 \times 60 \times 1.0 \times 10^3 \times 2.0$ 1200000 [cal/h] 860 ≈ 1400 [W] Cooling capacity = Considering a safety factor of 20%, 1400 [W] x 1.2 = 1680 [W]

## **Required Cooling Capacity Calculation**

#### Example 3: When there is no heat generation, and when cooling the object below a certain temperature and period of time.

Heat quantity by cooled substance (per unit time) Q: Unknown [W] ([J/s])

Cooled substance : Water Cooled substance mass m :  $(= \rho \times V)$  [kg] Cooled substance density p : 1 [kg/L] Cooled substance total volume V : 20 [dm<sup>3</sup>]

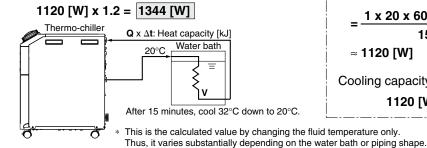

: 4.2 x 10<sup>3</sup> [J/(kg·K)] Cooled substance specific heat C Cooled substance temperature when cooling begins To: 305 [K] (32 [°C])

Cooled substance temperature after t hour Tt : 293 [K] (20 [°C]) Cooling temperature difference  $\Delta T$ :  $12 [K] (= T_0 - T_t)$ Cooling time  $\Delta t$ : 900 [s] (= 15 [min])

\* Refer to the following for the typical physical property values by circulating fluid.

$$Q = \frac{m \times C \times (T_0 - T_t)}{\Delta t} = \frac{\rho \times V \times C \times \Delta T}{\Delta t}$$
$$= \frac{1 \times 20 \times 4.2 \times 10^3 \times 12}{900} = 1120 \text{ [J/s]} \approx 1120 \text{ [W]}$$

Cooling capacity = Considering a safety factor of 20%,

#### **Example of conventional units (Reference)**

Heat quantity by cooled substance (per unit time)  $Q: Unknown [cal/h] \rightarrow [W]$ 

Cooled substance :  $(= \rho \times V)$  [kgf] Cooled substance weight m : 1 [kgf/L] Cooled substance weight volume ratio  $\gamma$ Cooled substance total volume V : 20 [L]

Cooled substance specific heat C : 1.0 x 10<sup>3</sup> [cal/(kgf·°C)]

Cooled substance temperature when

cooling begins To : 32 [°C] Cooled substance temperature after t hour Tt: 20 [°C]

Cooling temperature difference  $\Delta T$ : 12 [ $^{\circ}$ C] (= T<sub>0</sub> - T<sub>t</sub>)

Cooling time  $\Delta t$ : 15 [min] Conversion factor: hours to minutes : 60 [min/h] Conversion factor: kcal/h to kW : 860 [(cal/h)/W]

$$Q = \frac{m \times C \times (T_0 - T_t)}{\Delta t \times 860} = \frac{\gamma \times V \times 60 \times C \times \Delta T}{\Delta t \times 860}$$
$$= \frac{1 \times 20 \times 60 \times 1.0 \times 10^3 \times 12}{15 \times 860}$$

≈ 1120 [W]

Cooling capacity = Considering a safety factor of 20%,

1120 [W] x 1.2 = 1344 [W]

## Precautions on Cooling Capacity Calculation

#### 1. Heating capacity

When the circulating fluid temperature is set above room temperature, it needs to be heated by the thermo-chiller. The heating capacity depends on the circulating fluid temperature. Consider the radiation rate and heat capacity of the user's equipment and check beforehand if the required heating capacity is provided.

#### 2. Pump capacity

#### <Circulating fluid flow rate>

Circulating fluid flow rate varies depending on the circulating fluid discharge pressure. Consider the installation height difference between the thermo-chiller and the user's equipment, and the piping resistance such as circulating fluid pipings, or piping size, or piping curves in the machine. Check beforehand if the required flow is achieved, using the pump capacity curves.

#### <Circulating fluid discharge pressure>

Circulating fluid discharge pressure has the possibility to increase up to the maximum pressure in the pump capacity curves. Check beforehand if the circulating fluid pipings or circulating fluid circuit of the user's equipment are fully durable against this pressure.

## Circulating Fluid Typical Physical Property Values

#### 1. This catalog uses the following values for density and specific heat in calculating the required cooling capacity.

 $\rho$ : 1 [kg/L] (or, using conventional units, weight volume ratio  $\gamma$  = 1 [kgf/L]) C: 4.19 x 10³ [J/(kg·K)] (or, using conventional units, 1 x 10³ [cal/(kgf·°C)]) Specific heat

#### 2. Values for density and specific heat change slightly according to temperature shown below. Use this as a reference. Water 15% Ethylene Glycol Aqueous Solution

Physical property value Density ρ		Specific heat C	Conventional units		
Temperature	[kg/L]	[J/(kg·K)]	Weight volume ratio $\gamma$ [kgf/L]	Specific heat C [cal/(kgf.°C)]	
5°C	1.00	4.2 x 10 <sup>3</sup>	1.00	1 x 10 <sup>3</sup>	
10°C	1.00	4.19 x 10 <sup>3</sup>	1.00	1 x 10 <sup>3</sup>	
15°C	1.00	4.19 x 10 <sup>3</sup>	1.00	1 x 10 <sup>3</sup>	
20°C	1.00	4.18 x 10 <sup>3</sup>	1.00	1 x 10 <sup>3</sup>	
25°C	1.00	4.18 x 10 <sup>3</sup>	1.00	1 x 10 <sup>3</sup>	
30°C	1.00	4.18 x 10 <sup>3</sup>	1.00	1 x 10 <sup>3</sup>	
35°C	0.99	4.18 x 10 <sup>3</sup>	0.99	1 x 10 <sup>3</sup>	
40°C	0.99	4.18 x 10 <sup>3</sup>	0.99	1 x 10 <sup>3</sup>	
40°C	0.99	4.18 x 10 <sup>3</sup>	0.99	1 x 10 <sup>3</sup>	

10/0 Emiliono diligiosi / Iquobao bolanon								
Physical property value	Density ρ	sity p Specific heat C	Conventional units					
Temperature	[kg/L]	[J/(kg·K)]	Weight volume ratio γ [kgf/L]	Specific heat C [cal/(kgf.°C)]				
5°C	1.02	3.91 x 10 <sup>3</sup>	1.02	0.93 x 10 <sup>3</sup>				
10°C	1.02	3.91 x 10 <sup>3</sup>	1.02	0.93 x 10 <sup>3</sup>

40°C	1.01	3.92 x 10 <sup>3</sup>	1.01	0.94 x 10 <sup>3</sup>				

<sup>\*</sup> Shown above are reference values. Contact circulating fluid supplier for

Be sure to read this before handling the products. Refer to page 513 for safety instructions and pages 514 to 517 for temperature control equipment precautions.

#### Design

## 

- 1. This catalog shows the specifications of a single unit.
  - Check the specifications of the single unit (contents of this catalog) and thoroughly consider the adaptability between the user's system and this unit.
  - 2) Although a protection circuit as a single unit is installed, prepare a drain pan, water leakage sensor, discharge air facility, and emergency stop equipment, depending on the user's operating conditions. Also, the user is requested to carry out a safety design for the whole system.
- When attempting to cool areas that are open to the atmosphere (tanks, pipes), plan your piping system accordingly.

When cooling open-air external tanks, arrange the piping so that there are coil pipes for cooling inside the tanks and to carry back the entire flow volume of circulating fluid that is released.

3. Use non-corrosive material for circulating fluid contact parts.

The recommended circulating fluid is tap water or 15% ethylene glycol aqueous solution. Using corrosive materials such as aluminum or iron for fluid contact parts such as piping may cause clogging or leakage in the circulating fluid circuit. Therefore, take sufficient care when selecting fluid contact part materials such as piping.

4. Design the piping so that no foreign matter enters the chiller.

If foreign matter, such as scales in the piping, enters the circulating fluid, this may cause the pump to malfunction. In particular, when the option T (High-pressure pump mounted) or HRS050/060 is used, it is strongly recommended to install the particle filter.

#### Selection

# **Marning**

1. Model selection

When selecting a thermo-chiller model, the amount of heat generation from the user's equipment must be known. Obtain this value, referring to "Cooling Capacity Calculation" on pages 69 and 70 before selecting a model.

## Handling

## 

1. Thoroughly read the operation manual.

Read the operation manual completely before operation, and keep the manual where it can be referred to as necessary.

#### Transportation/Carriage/Movement

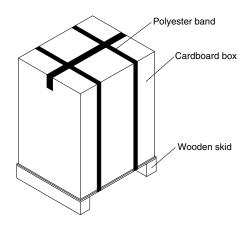

## **Marning**

- 1. This product is heavy. Pay attention to safety and the position of the product when it is transported, carried, and moved.
- 2. Read the operation manual carefully before moving the product after unpacking.

## **⚠** Caution

 Never put the product down on its side as this may cause failure.

The product will be delivered in the packaging shown below.

Model	Weight [kg]*1	Dimensions [mm]
HRS012-□□-10 HRS018-□□-10	49	Height 790 x Width 470 x Depth 580
HRS012-□□-20 HRS018-□□-20 HRS024-□□-20	52	Height 790 x Width 470 x Depth 580
HRS030-A□-20	56	Height 830 x Width 470 x Depth 580
HRS030-W□-20	55	Height 630 x Width 470 x Depth 560
HRS040-□□-20	63	Height 900 x Width 450 x Depth 670
HRS050-A□-20	80	
HRS050-W□-20	78	Height 1160 x Width 450 x Depth 670
HRS060-A□-20	84	neight 1160 x whith 450 x Depth 670
HRS060-W□-20	78	

\*1 For models with an option, the weight increases as shown below.

Option symbol	Description	Additional weight	
-B	-B With earth leakage breaker		
-J With automatic fluid fill function		+1 kg	
-M	Applicable to deionized water piping	No additional weight	
-т	High-pressure pump mounted (100 V type)	+4 kg	
-1	High-pressure pump mounted (200 V type)	+6 kg	
-G	High-temperature environment specification	No additional weight	

## **⚠** Caution

If this product is to be transported after delivery, please use the original packaging the product was delivered in. If other packaging is to be used, carefully package the product so as to prevent the product from incurring any damage during transport.

HRS 100/150 HRS090 HRS-R

HRS200 HRSH090

# **HRS** Series Specific Product Precautions 2

Be sure to read this before handling the products. Refer to page 513 for safety instructions and pages 514 to 517 for temperature control equipment precautions.

#### Operating Environment/Storage Environment

# \land Warning

- 1. Do not use in the following environment as it will lead to a breakdown.
  - Outdoors
  - 2) In locations where water, water vapor, salt water, and oil may splash on the product
  - 3) In locations where there are dust and particles
  - 4) In locations where corrosive gases, organic solvents, chemical fluids, or flammable gases are present (This product is not explosion proof.)
  - 5) In locations where the ambient temperature exceeds the limits as mentioned below

During transportation/storage: 0 to 50°C (But as long as water or circulating fluid are not left inside the pipings)

> During operation: 5 to 40°C (When option G, high-temperature environment specification, is selected: 5 to 45°C)

6) In locations where the ambient humidity is out of the following range or where condensation occurs

During transportation/storage: 15 to 85% During operation: 30 to 70%

- 7) In locations which receive direct sunlight or radiated heat
- 8) In locations where there is a heat source nearby and the ventilation is poor
- 9) In locations where temperature substantially changes
- 10) In locations where strong magnetic noise occurs (In locations where strong electric fields, strong magnetic fields, and surge voltage occur)
- 11) In locations where static electricity occurs, or conditions which make the product discharge static electricity
- 12) In locations where high frequency occurs
- 13) In locations where damage is likely to occur due to lightning
- 14) In locations at an altitude of 3000 m or higher (Except during storage and transportation)
  - For altitudes of 1000 m or higher Because of lower air density, the heat radiation efficiencies of the devices in the product will be lower in the location at an altitude of 1000 m or higher. Therefore, the maximum ambient temperature to use and the cooling capacity will lower according to the descriptions in the table below.

Select the thermo-chiller considering the descriptions.

- 1) Upper limit of ambient temperature: Use the product in ambient temperature of the described value or lower at each altitude.
- 2 Cooling capacity coefficient: The product's cooling capacity will lower to one that multiplied by the described value at each altitude.

	① Upper lim	2 Cooling	
Altitude [m]	m] 40°C 45°C products (For high-temperature		capacity
	products	environment specification, Option G)	coefficient
Less than 1000 m	40	45	1.00
Less than 1500 m	38	42	0.85
Less than 2000 m	36	38	0.80
Less than 2500 m	34	35	0.75
Less than 3000 m	32	32	0.70

- 15) In locations where strong impacts or vibrations occur
- 16) In locations where a massive force strong enough to deform the product is applied or the weight from a heavy object is applied
- 17) In locations where there is not sufficient space for maintenance

2. Install in an environment where the unit will not come into direct contact with rain or snow.

These models are for indoor use only.

Do not install outdoors where rain or snow may fall on them.

3. Conduct ventilation and cooling to discharge heat. (Air-cooled refrigeration)

The heat which is cooled down through air-cooled condenser is discharged.

When using in a room which is shut tightly, ambient temperature will exceed the specification range stipulated in this catalog, which will activate the safety detector and stop the operation. In order to avoid this situation, discharge the heat outside of a room by ventilation or cooling facilities.

4. The product is not designed for clean room usage. It generates particles internally.

Be sure to read this before handling the products. Refer to page 513 for safety instructions and pages 514 to 517 for temperature control equipment precautions.

#### Mounting/Installation

## **∧** Warning

- 1. Do not use the product outdoors.
- Do not place heavy objects on top of this product, or step on it.The external panel can be deformed and danger can result.

## **∧** Caution

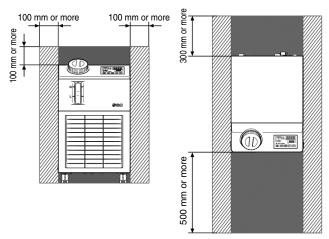

- Install on a rigid floor which can withstand this product's weight.
- When installing without the casters, use the adjuster feet, etc. to raise the chiller to the following heights or more.

This product cannot be directly installed on the floor as some screws come out from the bottom of the product.

- HRS012 to 030 10 mm
- HRS040 to 060 15 mm
- Refer to the operation manual for this product, and secure an installation space that is necessary for the maintenance and ventilation.

#### <Air-cooled refrigeration>

- 1. The air-cooled type product exhausts heat using the fan that is mounted to the product. If the product is operated with insufficient ventilation, ambient temperature may exceed 40°C\*1, and this will affect the performance and life of the product. To prevent this ensure that suitable ventilation is available (see below).
  - \*1 When option G, high-temperature environment specification, is selected: 45°C
- For installation indoors, ventilation ports and a ventilation fan should be equipped as needed.

When option G, high-temperature environment specification, is selected: HRS030/HRS040/HRS050/HRS060 (A ventilation space is required since the ventilation slots are provided on the sides of the product.)

#### <Heat radiation amount/Required ventilation rate>

	Heat radiation	Required ventilation rate [m <sup>3</sup> /min]		
Model		Differential temp. of 3°C between inside		
	[kW]	and outside of installation area	and outside of installation area	
HRS012-A	Approx. 2	40	20	
HRS018-A	Approx. 4	70	40	
HRS024-A	Approx. 5	90	50	
HRS030-A	Approx. 6	100	60	
HRS040-A	Approx. 8	120	70	
HRS050-A	Approx. 10	140	70	
HRS060-A	Approx. 10	140	70	

#### **Piping**

# **⚠** Caution

1. Regarding the circulating fluid pipings, consider carefully the suitability for shutoff pressure, temperature and circulating fluid.

If the operating performance is not sufficient, the pipings may burst during operation. Also, the use of corrosive materials such as aluminum or iron for fluid contact parts, such as piping, may not only lead to clogging or leakage in the circulating fluid and facility water circuits but also refrigerant leakage and other unexpected problems. Provide protection against corrosion when you use the product.

- **2.** Select the piping port size which can exceed the rated flow. For the rated flow, refer to the pump capacity table.
- 3. When tightening at the circulating fluid inlet and outlet, drain port or overflow port of this product, use a pipe wrench to clamp the connection ports.
- For the circulating fluid piping connection, install a drain pan and wastewater collection pit just in case the circulating fluid may leak.
- 5. This product series is constant-temperature fluid circulating machines with built-in tanks.

Do not install equipment on your system side such as pumps that forcibly return the circulating fluid to the unit. Also, if you attach an external tank that is open to the air, it may become impossible to circulate the circulating fluid. Proceed with caution.

#### **Electrical Wiring**

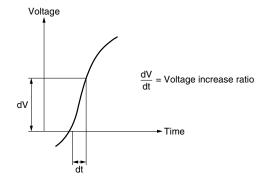

# **Marning**

1. Grounding should never be connected to a water line, gas line or lightning rod.

## **⚠** Caution

- 1. Communication cable should be prepared by the user.
- 2. Provide a stable power supply which is not affected by surge or distortion.

If the voltage increase ratio (dV/dt) at the zero cross should exceed 40 V/200  $\mu$ sec., it may result in malfunction.

Be sure to read this before handling the products. Refer to page 513 for safety instructions and pages 514 to 517 for temperature control equipment precautions.

#### **Circulating Fluid**

## **⚠** Caution

- 1. Avoid oil or other foreign matter entering the circulating fluid.
- 2. When water is used as a circulating fluid, use tap water that conforms to the appropriate water quality standards.

Use tap water that conforms to the standards shown below (including water used for dilution of ethylene glycol aqueous solution).

#### Tap Water (as a Circulating Fluid) Quality Standards

The Japan Refrigeration and Air Conditioning Industry Association

JRA GL-02-1994 "Cooling water system - Circulation type - Make-up water"

				Influence	
	Item	Unit	Standard value	Corrosion	Scale generation
	pH (at 25°C)	_	6.0 to 8.0	0	0
ے	Electric conductivity (25°C)	[µS/cm]	100*1 to 300*1	0	0
item	Chloride ion (CI-)	[mg/L]	50 or less	0	
Standard	Sulfuric acid ion (SO <sub>4</sub> <sup>2-</sup> )	[mg/L]	50 or less	0	
g	Acid consumption amount (at pH4.8)	[mg/L]	50 or less		0
tar	Total hardness	[mg/L]	70 or less		0
S	Calcium hardness (CaCO <sub>3</sub> )	[mg/L]	50 or less		0
	Ionic state silica (SiO <sub>2</sub> )	[mg/L]	30 or less		
item	Iron (Fe)	[mg/L]	0.3 or less	0	0
je	Copper (Cu)	[mg/L]	0.1 or less	0	
Se	Sulfide ion (S <sub>2</sub> <sup>-</sup> )	[mg/L]	Should not be detected.	0	
Reference	Ammonium ion (NH <sub>4</sub> +)	[mg/L]	0.1 or less	0	
efe	Residual chlorine (CI)	[mg/L]	0.3 or less	O	
ď	Free carbon (CO <sub>2</sub> )	[mg/L]	4.0 or less	0	

- \*1 In the case of [MΩ·cm], it will be 0.003 to 0.01.
- O: Factors that have an effect on corrosion or scale generation
- Even if the water quality standards are met, complete prevention of corrosion is not guaranteed.
- 3. Use an ethylene glycol aqueous solution that does not contain additives such as preservatives.
- 4. When using ethylene glycol aqueous solution, maintain a maximum concentration of 15%.

Overly high concentrations can cause a pump overload. Low concentrations, however, can lead to freezing when circulating fluid temperature is 10°C or lower and cause the thermo-chiller to break down.

5. A magnet pump or mechanical seal pump is used as the circulating pump for the circulating fluid.

It is particularly impossible to use liquid including metallic powders such as iron powder.

#### 6. The circulating fluids listed below have been tested for thermo-chiller compatibility.

No.	Fluid	Manufacturer	Concentration
4	Dowcal™ 100 Heat   The Dow Chemical		Dilute to 30% in
	Transfer Fluid	Company	water
2	ControXid 1642	Oelheld GmbH	Ready to use
3	Hexid A4	Applied Thermal Control Limited	Ready to use
4	Coolflow IGE	Hydratech Division of Liquitherm Technologies Group Ltd	Dilute to 25% in water
5	NALCO® CCL105	Nalco Water, an Ecolab Company	Ready to use

- The chiller cooling capacity and pump capacity performance may change with using the fluids listed. Customers should verify the performances with the fluid and decide to use the fluid.
- Check the compatibility with the piping and the wetted parts of the customer's equipment before use.
- · Check with the circulating fluid manufacturer for the following.
  - 1) Countries and regions where it can be obtained and used 3) Safety data sheets
- 2) Handling and maintenance 4) Specifications and physical properties • Concentration has to be value listed or less. Overly high concentrations can cause a pump overload. Low concentrations, however, can lead to freezing when circulating fluid temperature is 10°C or lower and cause the thermo-chiller to break down.
- Using the fluid listed for a long time, the chiller heat exchanger performance may be reduced due to additive deposits. It is recommended to regularly flush the inside of the piping and chiller with clean water.
- In the case of a mechanical seal pump, additive deposits may appear on the outside, it is not a malfunction.

### **Facility Water Supply**

# **.**↑ Warning

<Water-cooled refrigeration>

- 1. The water-cooled refrigeration type thermo-chiller radiates heat to the facility water.
  - Prepare the facility water system that satisfies the heat radiation and the facility water specifications below.

#### ■ Required facility water system

<Heat radiation amount/Facility water specifications>

Model	Heat radiation [kW]	Facility water specifications
HRS012-W□-□	Approx. 2	
HRS018-W□-□	Approx. 4	
HRS024-W□-20	Approx. 5	Refer to
HRS030-W□-20	Approx. 6	"Facility water system"
HRS040-W□-20	Approx. 8	in the specifications.
HRS050-W□-20	Approx. 10	
HRS060-W□-20	Approx. 12	

2. When using tap water as facility water, use tap water that conforms to the appropriate water quality standards.

Use tap water that conforms to the standards shown below. If the water quality standards are not met, clogging or leakage in the facility water piping, or other problems such as refrigerant leakage, etc., may result.

#### <Tap Water (as a Facility Water) Quality Standards>

The Japan Refrigeration and Air Conditioning Industry Association

	Ţ.	Influence			
	Item	Unit	Unit Standard value		Scale generation
	pH (at 25°C)	_	6.5 to 8.2	0	0
_	Electric conductivity (25°C)	[µS/cm]	100*1 to 800*1	0	0
item	Chloride ion (CI-)	[mg/L]	200 or less	0	
	Sulfuric acid ion (SO <sub>4</sub> <sup>2-</sup> )	[mg/L]	200 or less	0	
g	Acid consumption amount (at pH4.8)	[mg/L]	100 or less		0
Standard	Total hardness	[mg/L]	200 or less		0
	Calcium hardness (CaCO <sub>3</sub> )	[mg/L]	150 or less		0
	Ionic state silica (SiO <sub>2</sub> )	[mg/L]	50 or less		0
E	Iron (Fe)	[mg/L]	1.0 or less	0	0
item	Copper (Cu)	[mg/L]	0.3 or less	0	
ce	Sulfide ion (S <sub>2</sub> -)	[mg/L]	Should not be detected.	0	
eference	Ammonium ion (NH <sub>4</sub> +)	[mg/L]	1.0 or less	0	
efe	Residual chlorine (CI)	[mg/L]	0.3 or less	0	
Œ	Free carbon (CO <sub>2</sub> )	[mg/L]	4.0 or less	0	

- \*1 In the case of [M $\Omega$ ·cm], it will be 0.001 to 0.01.
- O: Factors that have an effect on corrosion or scale generation
- · Even if the water quality standards are met, complete prevention of corrosion
- We recommend to use the filter kit, FQ1011N-04-T020-B-X61, when you do not know the quality of circulating fluid to prevent leakage and other issues.
- 3. Supply pressure of 0.5 MPa or less.

If the supply pressure is high, it will cause water leakage.

4. Be sure to prepare your utilities so that the pressure of the thermo-chiller facility water outlet is at 0 MPa (atmospheric pressure) or more.

If the facility water outlet pressure becomes negative, the internal facility water piping may collapse, and proper flow control of facility water will be impossible.

Using deionized water as facility water may cause problems such as clogging in the piping due to metal ion.

5. Do not use fluid that includes metallic powders and other foreign materials.

It can cause issues: clogging of the circulating fluid circuit or leakage.

Be sure to read this before handling the products. Refer to page 513 for safety instructions and pages 514 to 517 for temperature control equipment precautions.

#### Operation

## **Marning**

#### 1. Confirmation before operation

 The fluid level of a tank should be within the specified range of "HIGH" and "LOW."

When exceeding the specified level, the circulating fluid will overflow.

2) Remove the air.

Conduct a trial operation, looking at the fluid level.

Since the fluid level will go down when the air is removed from the user's piping system, supply water once again when the fluid level is reduced. When there is no reduction in the fluid level, the job of removing the air is completed. Pump can be operated independently.

#### 2. Confirmation during operation

· Check the circulating fluid temperature.

The operating temperature range of the circulating fluid is between 5 and 40°C.

When the amount of heat generated from the user's equipment is greater than the product's capability, the circulating fluid temperature may exceed this range. Use caution regarding this matter.

#### 3. Emergency stop method

When an abnormality is confirmed, stop the machine immediately. After pushing the [OFF] switch, be sure to turn off the power switch.

**Operation Restart Time/Operation and Suspension Frequency** 

# **⚠** Caution

- Wait five minutes or more before restarting operation after it has been stopped. If the operation is restarted within five minutes, the protection circuit may activate and the operation may not start properly.
- Operation and suspension frequency should not exceed 10 times per day. Frequently switching between operation and suspension may result in the malfunction of the refrigeration circuit.

#### **Protection Circuit**

## **⚠** Caution

- 1. If operating in the below conditions, the protection circuit will activate and an operation may not be performed or will stop.
  - $\bullet$  Power supply voltage is not within the rated voltage range of  $\pm 10\%.$
  - In case the water level inside the tank is reduced abnormally.
  - Circulating fluid temperature is too high.
  - Compared to the cooling capacity, the heat generation amount of the user's equipment is too high.
  - Ambient temperature is too high. (40°C or more)
  - · Refrigerant pressure is too high.
  - Ventilation hole is clogged with dust or dirt.

#### **Maintenance**

## Caution

#### <Periodical inspection every one month>

#### 1. Clean the ventilation hole.

If the dustproof filter becomes clogged with dust or debris, a decline in cooling performance can result.

In order to avoid deforming or damaging the dustproof filter, clean it with a long-haired brush or air gun.

#### <Periodical inspection every three months>

#### 1. Inspect the circulating fluid.

- 1) When using tap water
  - · Replacement of tap water

Failure to replace the tap water can lead to the development of bacteria and algae. Replace it regularly according to your usage conditions.

· Tank cleaning

Consider whether dirt, slime, or foreign matter may be present in the circulating fluid inside the tank, and carry out regular cleanings of the tank.

2) When using ethylene glycol aqueous solution

Use a concentration meter to confirm that the concentration does not exceed 15%.

Dilute or add as needed to adjust the concentration.

#### <Periodical inspection during the winter season>

#### 1. Make water-removal arrangements beforehand.

If there is a risk of the circulating fluid freezing when the product is stopped, release the circulating fluid in advance.

#### 2. Contact a professional.

For additional methods to prevent freezing (such as commercially available tape heaters, etc.), contact a professional for advice.

#### ■ Refrigerant with GWP reference

	Global warming potential (GWP)		
Refrigerant	Regulation (EU) No 517/2014 (Based on the IPCC AR4)	Revised Fluorocarbons Recovery and Destruction Law (Japanese law)	
R134a	1,430	1,430
