Compact  
**28 mm**  
(Actual size)

## Space-saving Installation

**EtherNet/IP™ added!**

- **IP67\***

\* For units with D-sub connector, and when connected to S0700 manifolds, it is IP40.

- **Drives up to 32 solenoids**

Daisy-chain wiring communication

Applicable Fieldbus protocols

Top ported valve

IP67

Bottom ported valve

IP67

Side ported valve  
Mixed valve sizes manifold

IP67

7 mm width valve

IP40

Series **EX260**

Manifold length is shortened by the small fieldbus output module (SI unit).

Wiring and piping from the same direction is possible. (for side ported)

Effective for installation in locations where space is limited above the valve.

External branch connector is not necessary. Daisy-chain wiring is possible. Reduced wiring space

External terminating resistor is not necessary. (Only available for M12 PROFIBUS DP, CC-Link communication connectors)

ON/OFF switching is possible with an internal terminating resistor. External terminating resistor is not necessary.

## How to Order Manifold Assembly

### Example (SS5Y3-10SNAN-□)

SS5Y3-10SNAN-04D-C6 ...1 set (Type 10 4-station manifold base part no.)  
 \*SY3100-5U1 .....2 sets (2-position single part no.)  
 \*SY3200-5U1 .....1 set (2-position double part no.)  
 \*SY3300-5U1 .....1 set (3-position closed center part no.)

\*The asterisk denotes the symbol for assembly.  
 \*Prefix it to the part nos. of the valve, etc.

- The valve arrangement is numbered as the 1st station from the D side.
- Under the manifold part number, state the valves to be mounted in order from the 1st station as shown in the figure above. If the arrangement becomes complicated, specify on a manifold specification sheet.

Note) When mixing top ported configurations, select from page 13. Specify on a manifold specification sheet if plugs are required on the A and B port on the manifold.

## How to Order Valves (With two mounting screws)

## Series SY3000/5000

SY3000 can be mounted onto SY5000 size manifold.

### How to Order Manifold

Refer to page 20 for Type 11/  
Bottom ported dimensions.

#### Mixed Mounting Type

Note 1) Double wiring: single, double, 3-position and 4-position solenoid valves can be used on all manifold stations.

Use of a single solenoid will result in an unused control signal. If this is not desired, order with a specified layout.

Note 2) Specified layout: Indicate the wiring specifications on the manifold specification sheet.

(Note that 2-position double, 3-position and 4-position valves cannot be used where single wiring has been specified.)

Note 3) Includes the number of blanking plate assemblies.

# Series EX260 Specific Product Precautions 1

Be sure to read before handling. Refer to back cover for Safety Instructions, "Handling Precautions for SMC Products" (M-E03-3) and "Operation Manual" for 3/4/5 Port Solenoid Valve Precautions. The Operation Manual can be downloaded from the SMC website, <http://www.smcworld.com>

## Design/Selection

### ⚠ Warning

- 1. Use this product within the specification range.**  
Using beyond the specified specifications range can cause fire, malfunction, or damage to the system.  
Check the specifications before operation.
- 2. When using for an interlock circuit:**
  - Provide a multiple interlock system which is operated by another system (such as mechanical protection function).
  - Perform an inspection to confirm that it is working properly.

This may cause possible injury due to malfunction.

### ⚠ Caution

- 1. When applicable to UL, use a Class 2 power supply unit conforming to UL1310 for direct current power supply.**
- 2. Use this product within the specified voltage range.**  
Using beyond the specified voltage range is likely to cause the units and connecting devices to be damaged or to malfunction.
- 3. Do not install a unit in a place where it can be used as a foothold.**  
Applying any excessive load such as stepping on the unit by mistake or placing a foot on it, will cause it to break.
- 4. Keep the surrounding space free for maintenance.**  
When designing a system, take into consideration the amount of free space needed for performing maintenance.
- 5. Do not remove the name plate.**  
Improper maintenance or incorrect use of operation manual can cause failure and malfunction. Also, there is a risk of losing conformity with safety standards.

## Mounting

### ⚠ Caution

- 1. When handling and assembling units:**
  - Do not apply excessive force to the unit when disassembling.  
The connecting portions of the unit are firmly joined with seals.
  - When joining units, take care not to get fingers caught between units.  
Injury can result.
- 2. Do not drop, bump, or apply excessive impact.**  
Otherwise, the unit can become damaged, malfunction, or fail to function.
- 3. Observe the tightening torque range.**  
Tightening outside of the allowable torque range will likely damage the screw.  
IP67 cannot be guaranteed if the screws are not tightened to the specified torque.

## Mounting

### ⚠ Caution

- 4. When lifting a large size manifold solenoid valve unit, take care to avoid causing stress to the valve connection joint.**  
The connection parts of the unit may be damaged. Because the unit may be heavy, carrying and installation should be performed by more than one operator to avoid strain or injury.
- 5. When placing a manifold, mount it on a flat surface.**  
Torsion in the whole manifold can lead to trouble such as air leakage or defective insulation.

## Wiring

### ⚠ Caution

- 1. Check the grounding to maintain the safety of the reduced wiring system and for anti-noise performance.**  
Provide a specific grounding as close to the unit as possible to minimize the distance to grounding.
- 2. Avoid repeatedly bending or stretching the cable and applying a heavy object or force to it.**  
Wiring applying repeated bending and tensile stress to the cable can break the circuit.
- 3. Avoid miswiring.**  
If miswired, there is a danger of malfunction or damage to the reduced wiring system.
- 4. Do not wire while energizing the product.**  
There is a danger of malfunction or damage to the reduced wiring system or output device.
- 5. Avoid wiring the power line and high pressure line in parallel.**  
Noise or surge produced by signal line resulting from the power line or high pressure line could cause malfunction. Wiring of the reduced wiring system or output device and the power line or high pressure line should be separated from each other.
- 6. Check the wiring insulation.**  
Defective insulation (contact with other circuits, improper insulation between terminals, etc.) may cause damage to the reduced wiring system or output device due to excessive voltage and current.
- 7. When a reduced wiring system is installed in machinery/equipment, provide adequate protection against noise by using noise filters, etc.**  
Noise in signal lines may cause malfunction.

## Series EX260

# Specific Product Precautions 2

Be sure to read before handling. Refer to back cover for Safety Instructions, "Handling Precautions for SMC Products" (M-E03-3) and "Operation Manual" for 3/4/5 Port Solenoid Valve Precautions. The Operation Manual can be downloaded from the SMC website, <http://www.smcworld.com>

### Wiring

#### Caution

- 8. When connecting wires of output device, prevent water, solvent or oil from entering inside the connector section.**

This can cause damage, equipment failure or malfunction.

- 9. Avoid wiring patterns in which excessive stress is applied to the connector.**

This may cause malfunction or damage to the unit due to contact failure.

- 10. Select connectors that are  $\phi 16$  or less if mounting manifolds directly using fieldwireable connectors for SI unit power supply wiring.**

Using large diameter connectors causes interference with the mounting surface.

The following cables with connectors are recommended.

■ For EX260-SPR□/-SDN□/-SEC□/-SPN□/-SEN□

<Cable with connector>

- EX500-AP□□□□-□
- PCA-1401804/-1401805/-1401806

### Operating Environment

#### Warning

- 1. Do not use in an atmosphere containing an inflammable gas or explosive gas.**

Use in such an atmosphere is likely to cause a fire or explosion. This system is not explosion-proof.

#### Caution

- 1. Select the proper type of enclosure according to the environment of operation.**

IP67 is achieved when the following conditions are met.

- 1) Provide appropriate wiring between all units using electrical wiring cables, communication connectors and cables with M12 connectors.
- 2) Suitable mounting of each unit and manifold valve.
- 3) Be sure to mount a seal cap on any unused connectors.

If using in an environment that is exposed to water splashes, please take measures such as using a cover.

When the enclosure is IP40, do not use in an operating environment or atmosphere where it may come in contact with corrosive gas, chemical agents, seawater, water, or water vapor.

When connected to the EX260-SPR5/6/7/8, manifold enclosure is IP40.

### Operating Environment

#### Caution

- 2. Provide adequate protection when operating in locations such as the following.**

Failure to do so may cause damage or malfunction.

The effect of countermeasures should be checked in individual equipment and machine.

- 1) Where noise is generated by static electricity, etc.
- 2) Where there is a strong electric field
- 3) Where there is a danger of exposure to radiation
- 4) When in close proximity to power lines or high voltage lines

- 3. Do not use in an environment where oil and chemicals are used.**

Operating in environments with coolants, cleaning solvents, various oils or chemicals may cause adverse effects (damage, malfunction) to the unit even in a short period of time.

- 4. Do not use in an environment where the product could be exposed to corrosive gas or liquid.**

This may damage the unit and cause it to malfunction.

- 5. Do not use in locations with sources of surge generation.**

Installation of the unit in an area around the equipment (electromagnetic lifters, high frequency induction furnaces, welding machine, motors, etc.), which generates the large surge voltage could cause to deteriorate an internal circuitry element of the unit or result in damage. Implement countermeasures against the surge from the generating source, and avoid touching the lines with each other.

- 6. The product is CE marked, but not immune to lightning strikes. Take measures against lightning strikes in your system.**

- 7. Keep dust, wire scraps and other extraneous material from getting inside the product.**

This may cause malfunction or damage.

- 8. Mount the unit in such locations, where no vibration or shock is affected.**

This may cause malfunction or damage.

- 9. Do not use in places where there are cyclic temperature changes.**

In case that the cyclic temperature is beyond normal temperature changes, the internal unit is likely to be adversely affected.

- 10. Do not use in direct sunlight.**

Do not use in direct sunlight. It may cause malfunction or damage.

- 11. Use this product within the specified ambient temperature range.**

This may cause malfunction.

- 12. Do not use in places where there is radiated heat around it.**

Such a place is likely to cause malfunction.

## Series EX260

It may cause burns.

### Maintenance

#### Warning

1. Do not disassemble, modify (including circuit board replacement) or repair this product.

Such actions are likely to cause injuries or breakage.

2. When an inspection is performed,

- Turn off the power supply.
- Stop the air supply, exhaust the residual pressure in piping and verify that the air is released before performing maintenance work.

Unexpected malfunction of system components and injury can result.

#### Caution

1. When handling and replacing the unit:

- Do not apply excessive force to the unit when disassembling.

The connecting portions of the unit are firmly joined with seals.

- When joining units, take care not to get fingers caught between units.

Injury can result.

2. Perform periodic inspection.

Unexpected malfunction in the system composition devices is likely to occur due to malfunction of machinery or equipment.

3. After maintenance, make sure to perform an appropriate functionality inspection.

In cases of abnormality such as faulty operation, stop operation. Unexpected malfunction in the system composition devices is likely to occur.

4. Do not use benzene and thinner for cleaning units.

Damage to the surface or erasure of the display can result.

Wipe off any stains with a soft cloth.

If the stain is persistent, wipe off with a cloth soaked in a dilute solution of neutral detergent and wrung out tightly, and then finish with a dry cloth.
