## **Features**

- 1-channel isolated barrier
- 24 V DC supply (Power Rail)
- Dry contact or NAMUR inputs
- Usable as signal splitter (1 input and 2 outputs)
- · Relay contact output
- · Fault relay contact output
- Line fault detection (LFD)
- · Reversible mode of operation
- Up to SIL2 acc. to IEC 61508/IEC 61511

#### **Function**

This isolated barrier is used for intrinsic safety applications. It transfers digital signals (NAMUR sensors/mechanical contacts) from a hazardous area to a safe area.

The proximity sensor or switch controls a form C changeover relay contact for the safe area load. The normal output state can be reversed using switch S1. Switch S2 allows output II to be switched between a signal output or an error message output. Switch S3 is used to enable or disable line fault detection of the field circuit.

During an error condition, the relays revert to their deenergized state and the LEDs indicate the fault according to NAMUR NE44.

A unique collective error messaging feature is available when used with the Power Rail system.

#### Connection

General specifications		
Signal type		Digital Input
Supply		Signal II put
Connection		Power Rail or terminals 14+, 15-
		20 30 V DC
Rated voltage U <sub>n</sub>		≤ 10 %
	1	≤ 50 mA
Rated current I <sub>n</sub>		1 W
Power loss		< 1.3 W
Power consumption		< 1.5 W
Input		Assessing to the Octoor
Connection		terminals 1+, 2+, 3-
Rated values		acc. to EN 60947-5-6 (NAMUR)
Open circuit voltage/short-circuit current		approx. 8 V DC / approx. 8 mA
Switching point/switching hysteresis		1.2 2.1 mA / approx. 0.2 mA
Line fault detection		breakage I ≤ 0.1 mA , short-circuit I > 6 mA
Pulse/Pause ratio		≥ 20 ms / ≥ 20 ms
Output		
Connection		output I: terminals 7, 8, 9; output II: terminals 10, 11, 12
Output I		signal; relay
Output II		signal or error message ; relay
Contact loading		253 V AC/2 A/cos $\varphi$ > 0.7; 126.5 V AC/4 A/cos $\varphi$ > 0.7; 40 V DC/2 A resistive load
Minimum switch current		2 mA / 24 V DC
Energized/De-energized delay		approx. 20 ms / approx. 20 ms
Mechanical life		10 <sup>7</sup> switching cycles
Transfer characteristics		
Switching frequency		≤ 10 Hz
Electrical isolation		
Input/Output		reinforced insulation according to IEC/EN 61010-1, rated insulation voltage 300 V <sub>eff</sub>
Input/power supply		reinforced insulation according to IEC/EN 61010-1, rated insulation voltage 300 V <sub>eff</sub>
Output/power supply		reinforced insulation according to IEC/EN 61010-1, rated insulation voltage 300 V <sub>eff</sub>
Output/Output		reinforced insulation according to IEC/EN 61010-1, rated insulation voltage 300 V <sub>eff</sub>
Directive conformity

# Configuration

# **Switch position**

S	Fu	Position	
1	Mode of operation	with high input current	ı
	Output I (relay) energized	with low input current	II
2	Assignment	switching state like output I	ı
	Output II (relay)	fault signal output (de-energized if fault)	II
3	Line fault detection	ON	ı
		OFF	II

# **Operating status**

Control circuit	Input signal
Initiator high impedance/ contact opened	low input current
Initiator low impedance/ contact closed	high input current
Lead breakage, lead short-circuit	Line fault

Factory settings: switch 1, 2 and 3 in position I

The maximum number of switching cycles is depending on the electrical load and may be higher when reduced currents and voltages are applied.

### Accessories

### Power feed module KFD2-EB2

The power feed module is used to supply the devices with 24 V DC via the Power Rail. The fuse-protected power feed module can supply up to 150 individual devices depending on the power consumption of the devices. Collective error messages received from the Power Rail activate a galvanically-isolated mechanical contact.

## **Power Rail UPR-03**

The Power Rail UPR-03 is a complete unit consisting of the electrical insert and an aluminium profile rail 35 mm x 15 mm. To make electrical contact, the devices are simply engaged.

#### Profile Rail K-DUCT with Power Rail

The profile rail K-DUCT is an aluminum profile rail with Power Rail insert and two integral cable ducts for system and field cables. Due to this assembly no additional cable guides are necessary.

Power Rail and Profile Rail must not be fed via the device terminals of the individual devices!
