There are many sources for low-energy transients or “dirty power” that cause disruption and equipment failure. But there’s only one real power quality solution and its Active Tracking® Filtering Technology from Emerson Network Power.

The difference between the SP-6TVN and other surge suppression devices is how surge suppression combines with our Active Tracking® Filtering to eliminate electrical abnormalities generated by other equipment located within your home or office. It also eliminates low-voltage transients missed by typical surge suppression technology.
