

The label on the AD24 adapter, should list the OUTPUT as regulated 9VDC 1.6A. The label should also indicate the + POSITIVE and the - NEGATIVE contacts of the adapter plug. The outside surface of the tip at the end of the plug, should be + POSITIVE and the inside contact should be - NEGATIVE.

No more batteries! The p-touch AD24/AD-24ES AC Adaptor replaces the older AD30 and AD60 power adaptors but is not compatible with every p-touch model. Please check compatibility of your Brother p-touch printer

Using a wrong adapter can DAMAGE the machine internally and void the warranty.
