Form 1066-090120

## **SNAP Analog Output Modules**

#### **Features**

- Nesolution = 0.004% of nominal range
- Rugged packaging
- Convenient pluggable wiring
- Powered by a single 5-volt supply
- Factory calibrated; no user adjustment necessary
- Out-of-range indication
- Operating temperature 0 °C to 70 °C
- Accepts up to 14 AWG wire

## **Description**

SNAP I/O analog output modules are part of Opto 22's SNAP PAC System. They mount on SNAP PAC racks along with other I/O modules and a SNAP PAC brain or R-series controller.

These software-configurable output modules handle a wide variety of signal levels. Most provide dual-channel packaging. All SNAP analog modules are factory calibrated. Part numbers ending in -FM are Factory Mutual approved.

SNAP analog output modules have an on-board microprocessor to provide module-level intelligence, which makes them an ideal choice for Original Equipment Manufacturers (OEMs). For additional information about the stand-alone operation of SNAP analog modules, please refer to the *SNAP I/O Module Integration Guide* (Opto 22 form #876).

For specifications and wiring diagrams, see the module descriptions starting on page 2. Dimensional drawings begin on page 10.

**Notes for legacy hardware:** SNAP analog output modules can also be used with legacy SNAP Simple, SNAP Ethernet, and SNAP Ultimate brains and with serial SNAP brains such as the B3000. These modules can be mounted on SNAP B-series or M-series racks.

#### **Isolation**

All SNAP analog output modules are transformer isolated as well as optically isolated from all other modules and from the I/O processor (SNAP PAC brain or on-the-rack controller). On most dual-channel modules, the two channels are *not* isolated from each other. The exceptions are the SNAP-AOA-23-iSRC and the SNAP-AOD-29, which have two isolated channels.

Transformer isolation prevents ground loop currents from flowing between field devices and causing noise that produces erroneous readings. Ground loop currents are caused when two grounded

### **SNAP Analog Output Modules**

field devices share a connection, and the ground potential at each device is different.

Optical isolation provides 4,000 volts of transient (4,000 V for 1 ms) protection for sensitive control electronics from industrial field signals.

**IMPORTANT:** Since most SNAP dual-channel analog output modules provide two single-ended output channels with a common reference, these dual channels are transformer and optically isolated from other modules, but not from each other. The exceptions are the SNAP-AOA-23-iSRC and the SNAP-AOD-29, which have channel-to-channel isolation

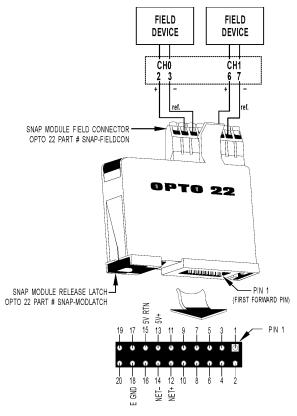

#### **Part Numbers**

| Part                                     | Description  | See  |
|--|--|------|
| SNAP-AOA-3                               | Single-channel current output, 4–20mA  | pg 2 |
| SNAP-AOV-5                               | Single-channel analog voltage output, 0 to 10 VDC                              | pg 3 |
| SNAP-AOA-23                              | Dual-channel analog output, current loop, 4–20mA                               | pg 4 |
| SNAP-AOA-23-iSRC<br>SNAP-AOA-23-iSRC-FM* | Isolated dual-channel analog output, current loop, 4–20 mA, with loop sourcing | pg 5 |
| SNAP-AOV-25                              | Dual-channel analog voltage output, 0 to 10 VDC                                | pg 6 |
| SNAP-AOV-27                              | Dual-channel analog voltage output, -10 to +10 VDC                             | pg 7 |
| SNAP-AOA-28                              | Dual-channel analog output, current loop, 0-20 mA                              | pg 8 |

SNAP ANALOG MODULE BASE CONTROL CONNECTOR (BOTTOM VIEW)

IMPORTANT: The mounting rack connector has 24 pins; the module connector has 20 pins. The extra pins on the mounting rack connector prevent misalignment of the module during installation.

| Part Number | Description                                    |
|-------------|--|
| SNAP-AOV-25 | Dual-channel analog output voltage 0 to 10 VDC |

### Description

The SNAP-AOV-25 module provides a nominal output range of 0 to  $\pm$ 10 volts. Each channel can supply +5 mA of load current.

NOTE: Both channels share a common reference terminal.
