

## SPECIFICATIONS:

## Ac Input

90-264 Vac, 47-63 Hz single phase

## Output Power

Total continuous output power is $60 \mathrm{~W}, 75 \mathrm{~W}$ peak for 60 s $10 \%$ duty cycle. Total continuous rating with 150 LFM of air is 70 W .

## Input Current

Units are exempt from input current harmonic requirements of EN61000-3-2 when output power is less than 62 W . Maximum input current at minimum input voltage and output overload will be less than 2.0 A .

## Inrush Current

Inrush is limited by internal thermistor. The inrush at 240 Vac, averaged over the first ac half-cycle under cold start conditions will not exceed 37 A .

## Input Protection

Internal AC fuse provided on all units. Designed to blow only if a catastrophic failure occurs in the unit -- Fuse does not blow on short circuit or unsustained overload.

## Holdup Time

Output voltage stays within regulation for 20 ms from loss of ac input at 65 W load, from 120 Vac input.

## Efficiency

80\% typical.

## Overload Protection

Fully protected against short circuit and output overload. Short circuit protection is cycling type power limit and will automatically recover after removal of fault.

## Overvoltage Protection

Built in with firing point set. OVP firing reduces output to less than $50 \%$ of nominal voltage in less than 50 ms .

## Output Noise

$0.5 \% \mathrm{rms}$, $1 \% \mathrm{pk}-\mathrm{pk}, 20 \mathrm{MHz}$ Bandwidth, differential mode. Measured with scope probe directly across output terminals of the power supply with load terminated with $1 \mu \mathrm{~F}$ capacitor.

## Transient Response

Main Output - $500 \mu \mathrm{~s}$ typical response time for return to within $0.5 \%$ of final value for a $50 \%$ load step within the regulation limits of minimum and maximum load, $\Delta \mathrm{i} / \Delta \mathrm{t}<$ $0.2 \mathrm{~A} / \mu \mathrm{s}$. Maximum voltage deviation is $3.5 \%$.

## FEATURES:

- 65 Watt Wide Range Input
- High Efficiency (Up to 90\%)
- Universal input 90-264 Vac
- 2-year warranty
- Also available in single outputs
- Conducted EMI exceeds FCC Class B and CISPR 22 Class B (Commercial models) and CISPR 11 Class B (Medical models)
- Exempt from line harmonics standard EN61000-3-2
- Commercial Approved to UL1950, CSA-C22.2 No. 950, EN60950
- Medical Approved to UL2601-1, CSA 22.2 No. 601.1, and EN60601-1
- C $\in$ marked to LVD

## Minimum Load

No minimum load required on any output. However, regulation limits may be exceeded if extreme conditions are applied. Contact factory for assistance.
Temperature Coefficient: $0.03 \%^{\circ} \mathrm{C}$ typical on all outputs.

## Voltage Adjustment

Units provided with potentiometer capable of a minimum adjustment range of $+/-5 \%$ from nominal setting.

## EMI / EMC Compliance:

All models include built-in EMI filtering to meet the EMC requirements of IEC601-1-2.

GLC65 Commercial - Safety
Condor DC Power Supplies, Inc. declares under our sole responsibility that all models are in conformity with the applicable requirements of EN60950 following the provisions of the Low Voltage Directive 73/23/EEC. All models are approved to UL1950 (with no D3 deviations), CSA22.2 No. 950-95 3rd edition, Level 3, IEC950, EN60950. CB certificate available.

Commercial Leakage Current
Less then $500 \mu \mathrm{~A} @ 120$ Vac. Less then $1.2 \mathrm{~mA} @ 240$ Vac.
GLM65 Medical - Safety
Approvals: All models are certified to be in compliance with the applicable requirements of UL2601-1, CSA 22.2 No. 601.1, IEC 601-1 (1988), EN 60601-1: 1990.
Medical Leakage Current
$40 \mu \mathrm{~A}$ under normal conditions (132 Vac @ 60 Hz ).
Maximum under single fault conditions (264 Vac @ 60
Hz ) is $170 \mu \mathrm{~A}$.

## GLC65 Commercial/GLM65 Medical 65 Watt Multipe Output

| Commercial Model | Medical Model | Output No. | Output | Output Maximum (A) | Output Maximum (B) | Total Regulation (E) | V1 Adjustment Note (C) | OVP Setpoint | Ripple/ Noise |

|  |  | 3 | +12 V | 2.5 A | 3 A | 6\% | -- | -- | 1\% |

Notes:
A. Continuous individual output ratings for unrestricted convection cooling. Combination of individual output loads must not exceed total power rating.
B. Peak rating for $60 \mathrm{~s} 10 \%$ duty cycle or continuous rating 150 LFM forced air cooling
C. Adjustment on V1 varies all outputs simultaneously ( $1 \%$ on V1 @ $1 \%$ on V2 \& V3).
D. Total combined current of $\mathrm{V} 1 \& \mathrm{~V} 2$ not to exceed 12 A . Combination of individual output loads must
not exceed total power rating.
E. Total regulation is defined as maximum deviation from the initial set point. With all other outputs at $50 \%$ load, output under test can be varied from 0 to $100 \%$ load and varied to any ac line voltage. Initial set point is $1 \%$ on $\mathrm{V} 1,2 \%$ on V 2 and $3 \%$ on V 3

| Vibration (C) | $1.5 \mathrm{~g}_{\mathrm{rms}}, 0.003 \mathrm{~g}^{2} / \mathrm{Hz}$ | $5 \mathrm{~g}_{\mathrm{rms}}, 0.026 \mathrm{~g}^{2} / \mathrm{Hz}$ |

A. Units should be allowed to warm up/operate under non-condensing conditions before application of power. Derate output current and total output power by 2.5\% per ${ }^{\circ} \mathrm{C}$ above $50^{\circ} \mathrm{C}$. Derate output power and current on all outputs by $2.5 \%$ per ${ }^{\circ} \mathrm{C}$ For operation in a confined space, moving air may be required. Under all conditions, the cooling vs. load profile should be such that heat sinks and/or heatsink temperatures do not exceed $90^{\circ} \mathrm{C}$ for extended periods.
B. Random vibration- 10 to $2000 \mathrm{~Hz}, 6 \mathrm{~dB} /$ octave roll-off from 350 to $2000 \mathrm{~Hz}, 3$ orthogonal axes. Tested for 10 min ./axis operating and 1 hr ./axis non-operating.
C. Shock testing-half-sinusoidal, $10 \pm 3 \mathrm{~ms}$ duration, $\pm$ direction, 3 orthogonal axes, total 6 shocks.
