

High sensitivity of nominal operating power 100mW is achieved. Ultra small package & Flat type

# GQ RELAYS (AGQ)

# **FEATURES**

- 1. Compact flat body saves space
  With a small footprint of 10.6 mm (L) ×
  7.2 mm (W) .417 inch (L) × .283 inch
  (W) for space savings, it also has a
  very short height of 5.2 mm .205 inch.
  (Standard PC board type.)
- 2. High sensitivity single side stable type (Nominal operating power: 100mW) is available
- 3. Outstanding surge resistance.
  Surge breakdown voltage between contacts and coil:
  2,500 V 2×10 µs (Telcordia)
  Surge breakdown voltage between open contacts:
  1,500 V 10×160 µs (FCC part 68)
- 4. The use of twin crossbar contacts ensures high contact reliability. AgPd contact is used because of its good sulfide resistance. Adopting lowgas molding material. Coil assembly molding technology which avoids generating volatile gas from coil.
- 5. Increased packaging density
  Due to highly efficient magnetic circuit
  design, leakage flux is reduced and
  changes in electrical characteristics
  from components being mounted

- close-together are minimized. This all means a packaging density higher than ever before.
- 6. Nominal operating power: 140 mW
- 7. Outstanding vibration and shock resistance

Functional shock resistance: 750 m/s<sup>2</sup> Destructive shock resistance:

1,000 m/s<sup>2</sup>

Functional vibration resistance: 10 to 55 Hz (at double amplitude of 3.3 mm .130 inch)

Destructive vibration resistance: 10 to 55 Hz (at double amplitude of 5 mm .197 inch)

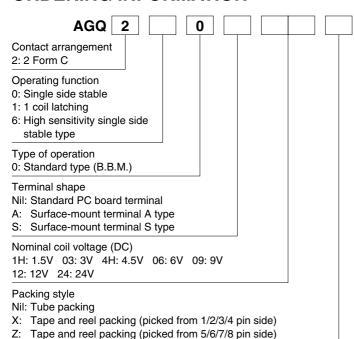

8. Sealed construction allows automatic washing.

# TYPICAL APPLICATIONS

- 1. Telephone switchboard
- 2. Telecommunications equipment
- 3. Security
- 4. Measurement equipment
- 5. Consumer electronic and audio visual equipment

#### 2. Automatic insertion

To maintain the internal function of the relay, the chucking pressure should not exceed the values below.

Chucking pressure in the direction A: 9.8 N {1 kgf} or less

Chucking pressure in the direction B: 9.8 N {1 kgf} or less

Chucking pressure in the direction C :  $9.8 \ N \{1 \ kgf\}$  or less

Please chuck the **mathematical** portion. Avoid chucking the center of the relay. In addition, excessive chucking pressure to the pinpoint of the relay should be also avoided.

For general cautions for use, please refer to the "Cautions for use of Signal Relays" or "General Application Guidelines".
