# DC Voltage

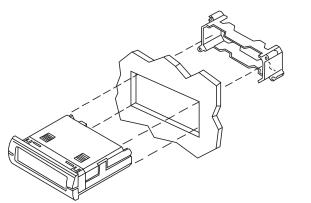

Mini-Max M235 Series Digital Panel Meter

- Minimum Depth Indicator Less Than 2.5" (60mm) of Space Required Behind the Panel
- Stackable Mounting Bracket Included for Easy Installation
- 3-1/2 Digit, 0.5" (12.7mm) High LCD Display with Optional Negative Image, Bright Red Backlighting
- Limited Range Display Scaling
- Standard Screw Terminals for Easy Installation
- Five Voltage Ranges: 200mV, 2V, 20V, 200V, 750V
- 85-250VAC or 9-32VDC Power

Simpson's Mini-Max Voltage Indicators provide high quality, accuracy, and reliability in a compact, 60mm deep case. Units offer 3-1/2 digit, 0.5" (12.7mm) LCD display and are available with a bright red, negative image backlight option. All units feature user-selectable decimal point, auto zero and limited scaling capabilities.

A unique mounting bracket is provided to allow for vertical or horizontal stacking of multiple indicators. All Mini-Max units feature a 3/64 DIN, high-impact plastic case. The standard units have a clear viewing window, and the units with optional negative image, red backlighting have a red window.

# Installation and Panel Cutout

Insert the Mini-Max through the panel, and then slide the mounting bracket on to the Mini-Max. The mounting bracket allows Mini-Max units to be stacked side-to-side or top-to-bottom and maintain the DIN standard panel arrangements in 24mm by 72mm multiples. Panel cutout instructions for stacking multiple units are provide under "stacking features."

# Specifications \_\_\_\_\_

### DISPLAY

Type: 7-segment LCD Height: 0.5" (12.7mm) Decimal point: 3-position programmable Overrange indication: Most significant digit = "1" Backlighting: Optional negative image, red backlighting Polarity: Auto with "-" indication, "+" implied

### POWER REQUIREMENTS

AC Volt: 85-250VAC @40-440Hz DC Volt: 9-32VDC

### **Power Consumption:**

85-250VAC: 2.5VA min/4VA max 9-32VDC: 1.5VA min/3VA max Rated Circuit to Ground Voltage: 750VRMS

### ACCURACY @ 25°C

 $\pm$ (0.1% of reading  $\pm$  1 count)

### ENVIRONMENTAL

**Operating Temperature:** 0 to 55°C **Storage Temperature:** -10 to 60°C **Relative Humidity:** 0 to 85% non condensing @ 40°C

**Temperature Coefficient:** (± 0.02% of input ± 0.2 digits)/°C **Warmup time:** Less than 20 minutes

## NOISE REJECTION

**NMRR:** 60dB, 50/60Hz **CMRR:** (w/1KΩ unbalanced @ 60Hz): 90dB min

### ANALOG TO DIGITAL CONVERSION Technique: Integrating

Rate: 3 samples/second-typical

# MECHANICAL

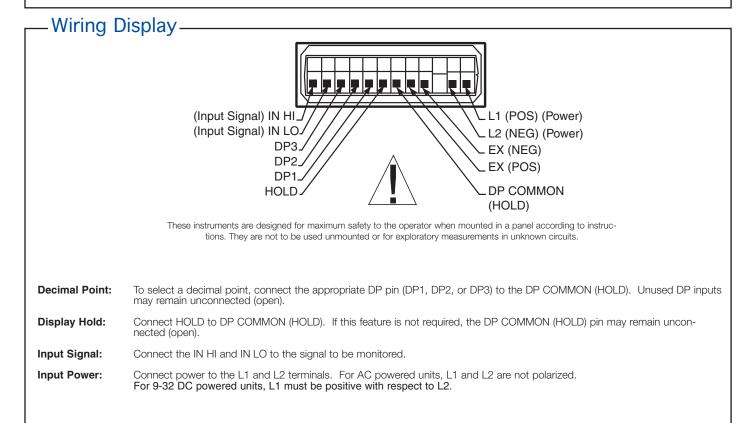

Bezel: 0.95" x 2.84" (24mm x 72mm)

### **MECHANICAL** (cont.)

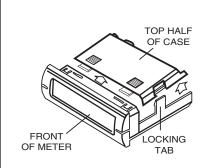

Depth: 2.36" (60mm) Panel cutout: 0.88" x 2.68" (22.2mm x 68mm) Weight: 3.5oz (99.2g) Case Material: 94-0,UL-rated, glass-filled thermoplastic

### **INPUTS: DC Voltage**

Range	Resolution	Input Impedance	Maximum Input	
200mV	100µV	$>100M\Omega$	100V	
2V	1mV	10MΩ	750V	
20V	10mV	10MΩ	750V	
200V	100mV	10MΩ	750V	

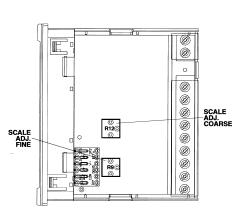

# Display Scaling —

Using a screwdriver or thumbnail, spread tab on each side of case to unlock top half. Lift rear top half and slide away from front of meter.

Mini-Max indicators have limited range coarse and fine adjustments for display scaling. There are no optional connections required for these to function. The "coarse" calibration R12 will allow a limited range of scaling values. The meter can be scaled down to 1/2 the value of the input or scaled up to 2 times the value of the input or a maximum reading of 1.999, which ever is lower. Example: A 2 volt input has a maximum reading of 1.999 so you cant double the 2 volts, but you can make 1 volt to read 1999. The "fine" calibration R9 allows for an approximate range of 1% of the "coarse" calibration. Apply full scale input to the meter. Adjust R12 to be within 1% of the desired scaled value, then use R9 to obtain the final desired result.

**Note:** Any physical damage to the meter during calibration will void the warranty.

# Application Example —

A company needs to monitor the power supply voltage and load current of a 12VDC motor.

Voltage: A Mini-Max DC Volt meter, configured for the 20 volt range, is installed in parallel with the power source. The IN HI is connected to the positive lead of the power supply. The IN LO is connected to the negative lead of the power supply.

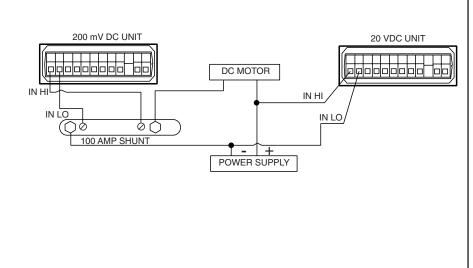

Current: A second Mini-Max DC Volt meter, configured for the 200 millivolt range, is used with a 100A/50mV shunt (sold separately) to measure the load current.

The meter is first scaled to read 100.0 at 50mV, by applying a 50mV input to the meter and adjusting R9 and R12 until the display reads 100.0. The meter is connected to the shunt, and the shunt is installed in series on the negative lag of the negative construction. tive leg of the power supply.

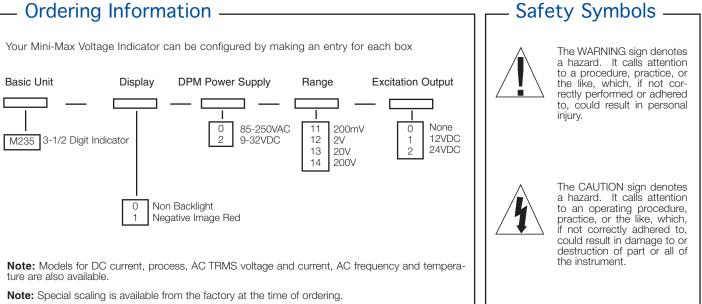

The positive lead of the shunt is connected to the IN HI terminal, and the negative lead connected to the IN LO terminal.

The Mini-Max units will indicate the power supply voltage and load current of the motor.
