## Single and Dual-Channel Safety Edge Controllers

for use with All Safety Edges and Safety Bumpers

- Power requirements
  - 120 VAC or 24 VDC is acceptable for the SCC-1224 single channel units
  - 24 VDC is acceptable for SCC-2124/2224 dual channel units
- Inputs
  - Single channel units accept a single two-wire edge or bumper system
  - Dual channel units accept 1 or 2 two-wire edge or bumper systems
- Outputs
  - Single channel units have two safety outputs and one auxiliary output for signaling
  - Dual channel units have either 1 or 2 safety outputs, and either 1 or 2 auxiliary outputs with DIP switch selection for input channel relationship
- External Device Monitoring –EDM is provided on all units with a N/C loop between Z1 and Z2
- Monitored Reset Modes
  - Monitored manual reset mode that requires closure of the reset circuit followed by opening of the circuit is available on all units
  - Automatic reset mode that occurs upon closure of the reset circuit is available on all units
- Delayed Auxiliary Output – Delayed opening of the auxiliary output for reversal of a door or gate may be selected on all units except SCC1224ND
