## Permissible mounting position

The contactors are designed for opera-
tion on a vertical mounting surface.

## Upright mounting position

## Positively driven contacts

The 3RH11 contactor relays fulfill the conditions for positively driven opera tions as required by the safety rules for control units on power-operated presses in the metal-working industry (ZH1/457) or correspond to the accident prevention regulations of the Schweizer Unfallversicherungsanstalt
(Swiss Institute for accident insurance).
There is a positively driven operation if it is ensured that the NC and NO contacts cannot be closed at the same time.

Positive driving, both in the basic unit and in the auxiliary switch block, as well as between the basic unit and the mounted auxiliary switch block ZH 1/457, SUVA
Note: There is no positive driving in the case of 3RH19 11-.NF.. electronically compatible auxiliary switch blocks.

## Contact reliability

Contact reliability at $17 \mathrm{~V}, 1 \mathrm{~mA}$ acc. to DIN 19240

Frequency of contact faults < 10-8, i.e. < 1 fault per 100 million operating cycles

## Contact endurance at utilization categories

## AC-15/AC-14 and DC-13

## The contact endurance is mainly

 dependent on the break-current, provided the command devices operate randomly, i.e. not synchronized with the phase angle of the supply system.If magnetic circuits other than contactor operating mechanisms or solenoid valves are present, e.g. magnetic brakes, protective measures for the load circuits are necessary.
RC elements and freewheeling diodes
would be suitable as protective features.
The characteristic curves apply to

- 3RH11 contactor relays
- 3RH14 latched contactor relays
- 3RH19 11 auxiliary switch blocks.

Legend to the diagram:

Ident. No.: 22E

## Terminal designations acc. to EN 50005

Front snappable 3RH19 11-1AA.. auxiliary switch blocks
Conductor entry from above
1 NO 1 NC

Front snappable 3RH19 11-1BA.. auxiliary switch blocks Conductor entry from below

Front snappable 3RH19 11-1LA.. auxiliary switch blocks
Conductor entry from above
2 NO

$1 \mathrm{NO}+1 \mathrm{NC}$

Front snappable 3RH19 11-1MA.. auxiliary switch blocks Conductor entry from below

2 NO

$1 \mathrm{NO}+1 \mathrm{NC}$

electronically compatible 3RH19 11-1NF.. auxiliary switch blocks, front snappable
2 NO
Ident. No.: 20

2 NC
02

Terminal designations acc. to DIN 46199 Part 5
3RT19 16-2E..., -2F... solid-state time-delay auxiliary switch blocks
1 NO + 1 NC
ON-delay

$1 \mathrm{NO}+1 \mathrm{NC}$
OFF-delay
