

Electric Slide Tables

Step Motor (Servo/24 VDC)

Servo Motor (24 VDC)

- Reduced cycle time
- Positioning repeatability: ± 0.05 mm

- Max. pushing force: **180 N**
Max. acceleration/deceleration: **5,000 mm/s²**
Max. speed: **400 mm/s**

Compact Type Series LES

Size: 8, 16, 25

Compared with the LESH, Workpiece mounting surface height: Reduced by up to **12%**

40.3 mm

Compact type
LES16D

46 mm

LESH16D

Basic type/R type

Symmetrical type/L type

Servo Motor (24 VDC)

Controller/Driver

► Step data input type
Series LECP6/LECA6

- 64 points positioning
- Input using controller setting kit or teaching box

► Programless type
Series LECP1

- 14 points positioning
- Control panel setting

► Pulse input type
Series LECPA

Series LES/LESH

SVC
CAT.ES100-78E

Compact Type Series LES

**Vertical
work
load**

Increased by up to 50%*

* By reducing weight of the moving parts

* Compared with the LESH16

Model	Vertical work load (kg)
LES16	3.0
LESH16	2.0

Applications

**Light
weight**

Reduced by up to 29%

Model	Weight (kg)	Reduction amount
LES16D-100	1.20	Reduced by 0.50 kg
LESH16D-100	1.70	

- Max. pushing force: **180 N**
- Possible to reduce cycle time
Max. acceleration/deceleration: **5,000 mm/s²**
Max. speed: **400 mm/s**
- Positioning repeatability: **±0.05 mm**
- 2 types of motors selectable/Step motor (Servo/24 VDC), Servo motor (24 VDC)

Basic type/R type

Series LES□R

Symmetrical type/L type

Series LES□L

In-line motor type/D type

Series LES□D

High Rigidity Type Series LESH

High rigidity

Deflection: 0.016 mm* * LESH16-50 Load: 25 N

Integration of the guide rail and the table Uses a circulating linear guide.

Positioning pin hole

Improved workpiece mounting reproducibility

Body mounting through-hole

Can be mounted from the top.

Workpiece mounting tap

Integration of the guide rail and the table

Compact, Space-saving

For LESH8 R/L, 50 mm stroke

Reduced by 61% in volume*

* Compared with the LESH16-50/LXSH-50

* For R/L type

Motor integrated into the body

Built-in motor

2 types of motors selectable

● Step motor (Servo/24 VDC)

Ideal for transfer of high load at a low speed and pushing operation

● Servo motor (24 VDC)

Stable at high speed and silent operation

Non-magnetizing lock mechanism (Option)

Prevents workpieces from dropping (holding)

Application Examples

Positioning of pallets on a conveyor

Z motion for pick and place

Symmetrical Type/L Type

The locations of the table and cable are opposite those of the basic type (R type), expanding design applications.

L type

Installation example

When two tables are installed side by side, they will not interfere with each other, allowing for space saving.

R type

In-line Motor Type/D Type

Width dimension shortened by up to **45%**

D type

R type

A Dimension

(mm)

Size	D type	R/L type
8	32	58.5
16	45	72.5
25	61	106

How to Mount

Through-hole mounting

(R/L/D type)

Side holder mounting

(D type)

Body tapped mounting

(R/L/D type)

Step Data Input Type Series LECP6/LECA6

Simple Setting to Use Straight Away

Easy Mode for Simple Setting

If you want to use it right away, select "Easy Mode."

Step motor
(Servo/24 VDC)
LECP6

Servo motor
(24 VDC)
LECA6

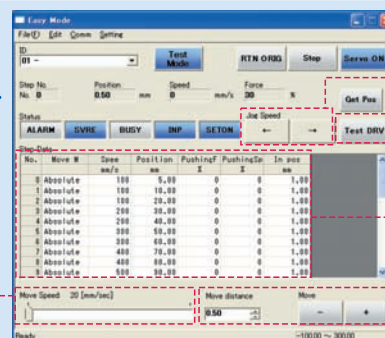

<When a PC is used>

Controller setting software

- Step data setting, test operation, move jog and move for the constant rate can be set and operated on one screen.

Setting of jog
and speed of the
constant rate

Move jog

Start testing

Step data setting

Move for the
constant rate

<When a TB (teaching box) is used>

- Simple screen without scrolling promotes ease of setting and operating.
- Pick up an icon from the first screen to select a function.
- Set up the step data and check the monitor on the second screen.

Example of setting the step data

Example of checking the operation status

Teaching box screen

- Data can be set with position and speed. (Other conditions are already set.)

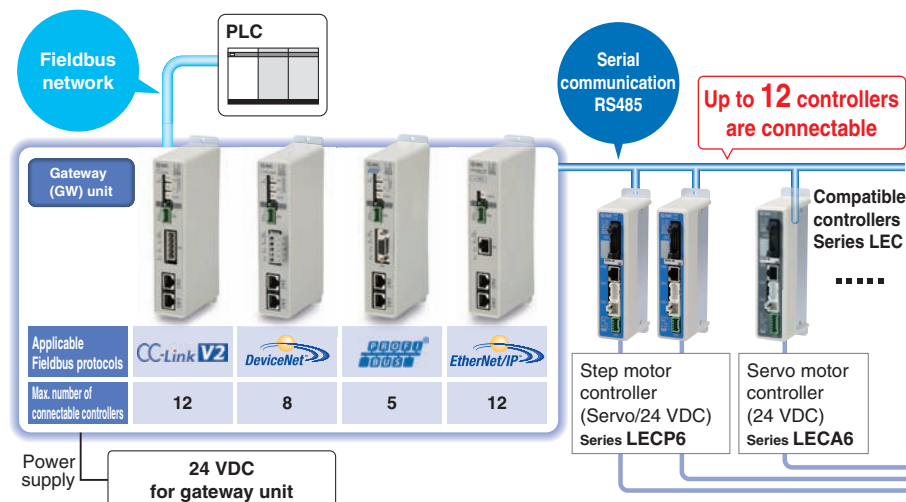

Step	Axis 1
Step No.	0
Posn	50.00 mm
Speed	200 mm/s

Step	Axis 1
Step No.	1
Posn	80.00 mm
Speed	100 mm/s

Gateway Unit Series LEC-G

- Unit linking the LECP6/LECA6 series and Fieldbus network
- Two methods of operation
 - Step data input: Operate using preset step data in the controller.
 - Numerical data input: The actuator operates using values such as position and speed from the PLC.

Compatible electric actuators

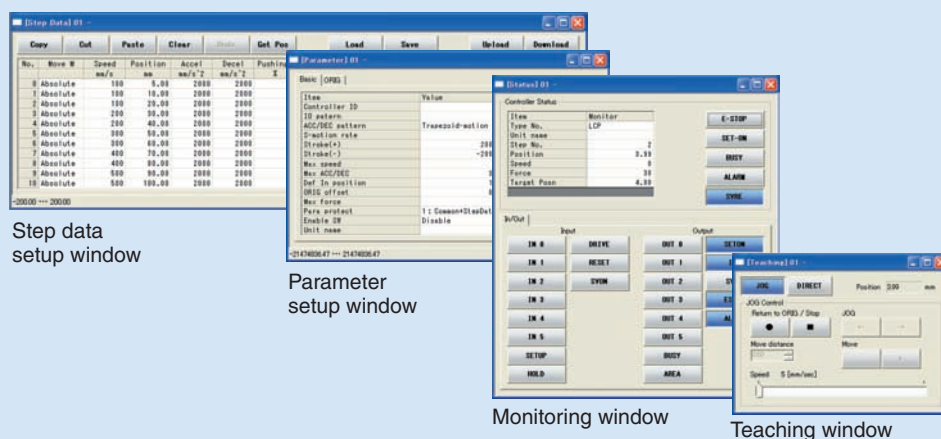

◎Normal Mode for Detailed Setting

Select normal mode when detailed setting is required.

- Step data can be set in detail.
- Parameters can be set.
- Signals and terminal status can be monitored.
- JOG and constant rate movement, return to origin, test operation and testing of forced output can be performed.

<When a PC is used> Controller setting software

- Step data setting, parameter setting, monitor, teaching, etc., are indicated in different windows.

<When a TB (teaching box) is used>

- Multiple step data can be stored in the teaching box, and transferred to the controller.
- Continuous test operation by up to 5 step data.

Teaching box screen

- Each function (step data setting, test, monitor, etc.) can be selected from the main menu.

The actuator and controller are provided as a set. (They can be ordered separately.)

Confirm that the combination of the controller and the actuator is correct.

<Check the following before use.>

- ① Check the actuator label for model number. This matches the controller.
- ② Check Parallel I/O configuration matches (NPN or PNP).

Programless Type Series LECP1

No programming

Capable of setting up an electric actuator operation without using a PC or teaching box

Step motor
(Servo/24 VDC)
LECP1

① Setting position number

Setting a registered number
for the stop position
Maximum 14 points

② Setting a stop position

Moving the actuator to a stop
position using FORWARD and
REVERSE buttons

③ Registration

Registering the stop
position using SET
button

Speed/Acceleration 16-level adjustment

Pulse Input Type Series LECPA

- A driver that uses pulse signals to allow positioning at any position.
The actuator can be controlled from the customers' positioning unit.

- **Return-to-origin command signal**
Enables automatic return-to-origin action.
- **With force limit function (Pushing force/Gripping force operation available)**
Pushing force/Positioning operation possible by switching signals.

Selection Procedure

For the high rigidity type LESH series, refer to page 25.

Step 1 Check the work load–speed.**Step 2** Check the cycle time.**Step 3** Check the allowable moment.

Selection Example

Step 1 Check the work load–speed. <Speed–Work load graph> (Page 2)

Select the target model based on the workpiece mass and speed with reference to the <Speed–Work load graph>.

Selection example) The **LES16□J-50** is temporarily selected based on the graph shown on the right side.

Operating conditions

- Workpiece mass: 1 [kg]
- Workpiece mounting condition:
- Speed: 220 [mm/s]
- Mounting orientation: Vertical
- Stroke: 50 [mm]
- Acceleration/Deceleration: 5,000 [mm/s²]
- Cycle time: 0.5 seconds

**Step 2** Check the cycle time.

It is possible to obtain an approximate cycle time by using method 1, but if a more detailed cycle time is required, use method 2.

Method 1: Check the cycle time graph. (Page 3)

Method 2: Calculation <Speed–Work load graph> (Page 2)

Calculate the cycle time using the following calculation method.

Calculation example)

T1 to T4 can be calculated as follows.

Cycle time:

T can be found from the following equation.

$$T = T1 + T2 + T3 + T4 \text{ [s]}$$

- T1: Acceleration time and T3: Deceleration time can be obtained by the following equation.

$$T1 = V/a1 \text{ [s]}$$

$$T3 = V/a2 \text{ [s]}$$

- T2: Constant speed time can be found from the following equation.

$$T2 = \frac{L - 0.5 \cdot V \cdot (T1 + T3)}{V} \text{ [s]}$$

- T4: Settling time varies depending on the conditions such as motor types, load and in positioning of the step data. Therefore, please calculate the settling time with reference to the following value.

$$T4 = 0.15 \text{ [s]}$$

$$T1 = V/a1 = 220/5000 = 0.04 \text{ [s]}$$

$$T3 = V/a2 = 220/5000 = 0.04 \text{ [s]}$$

$$T2 = \frac{L - 0.5 \cdot V \cdot (T1 + T3)}{V} = \frac{50 - 0.5 \cdot 220 \cdot (0.04 + 0.04)}{220} = 0.19 \text{ [s]}$$

$$T4 = 0.15 \text{ [s]}$$

Therefore, the cycle time can be obtained as follows.

$$T = T1 + T2 + T3 + T4 = 0.04 + 0.19 + 0.04 + 0.15 = 0.42 \text{ [s]}$$

LES16□/Step Motor Vertical

<Speed–Work load graph>

LES16□/Step Motor

<Cycle time>

LES16/Pitching

<Dynamic allowable moment>

Step 3 Check the allowable moment. <Static allowable moment> (Page 3)

<Dynamic allowable moment> (Page 4)

Confirm the moment that applies to the actuator is within the allowable range for both static and dynamic conditions.

Based on the above calculation result, the **LES16□J-50** is selected.

Rolling	[N·m]	0.8	1.8	4.8

Dynamic Allowable Moment

Note 1) This graph shows the amount of allowable overhang when the center of gravity of the workpiece overhangs in one direction. When the center of gravity of the workpiece overhangs in two directions, refer to the Electric Actuator Selection Software for confirmation.
 Note 2) For static moment as well, use a product below the range in the graph. <http://www.smcworld.com>

Acceleration/Deceleration — 5,000 mm/s²

Model Selection 2

Selection Procedure

For the high rigidity type LESH series, refer to page 29.

Step 1 Check the required force.**Step 2** Check the set value of pushing force.**Step 3** Check the duty ratio.

Selection Example

Operating conditions

- Pushing force: 90 [N]
- Workpiece mass: 1 [kg]
- Speed: 100 [mm/s]
- Stroke: 100 [mm]
- Mounting orientation: Vertical upward
- Pushing time + Operation (A): 1.5 seconds
- All cycle time (B): 6 seconds

**Step 1** Check the required force.

Calculate the approximate required force for pushing operation.

Selection example) • Pushing force: 90 [N]
 • Workpiece mass: 1 [kg]
 Therefore, the approximate required force can be obtained as $90 + 10 = 100$ [N].

Select the target model based on the approximate required force with reference to the specifications (Pages 11 and 12).

Selection example) Based on the specifications,
 • Approximate required force: 100 [N]
 • Speed: 100 [mm/s]
 Therefore, the **LES25□** is temporarily selected.

Then, calculate the required force for pushing operation.
 If the mounting position is vertical upward, add the actuator table weight.

Selection example) Based on the <Table weight>,
 • **LES25□** table weight: 0.5 [kg]
 Therefore, the required force can be obtained as $100 + 5 = 105$ [N].

Step 2 Check the set value of pushing force.

<Set value of pushing force–Force graph> (Page 6)

Select the target model based on the required force with reference to the <Set value of pushing force–Force graph>, and confirm the set value of pushing force.

Selection example) Based on the graph shown on the right side,
 • Required force: 105 [N]
 Therefore, the **LES25□K** is temporarily selected.
 This set value of pushing force is 40 [%].

Step 3 Check the duty ratio.

Confirm the allowable duty ratio based on the set value of pushing force with reference to the <Allowable duty ratio>.

Selection example) Based on the <Allowable duty ratio>,
 • Set value of pushing force: 40 [%]
 Therefore, the allowable duty ratio can be obtained as 30 [%].

Calculate the duty ratio for operating conditions, and confirm it does not exceed the allowable duty ratio.

Selection example) • Pushing time + Operation (A): 1.5 seconds
 • All cycle time (B): 6 seconds
 Therefore, the duty ratio can be obtained as $1.5/6 \times 100 = 25$ [%], and this is the allowable range.

Based on the above calculation result, the **LES25□K-100** is selected.
 For allowable moment, the selection procedure is the same as the positioning control.

Table Weight

[kg]

Model	Stroke [mm]

* LES25DA is not available.

Caution

[CE-compliant products]

- EMC compliance was tested by combining the electric actuator LES series and the controller LEC series. The EMC depends on the configuration of the customer's control panel and the relationship with other electrical equipment and wiring. Therefore conformity to the EMC directive cannot be certified for SMC components incorporated into the customer's equipment under actual operating conditions. As a result it is necessary for the customer to verify conformity to the EMC directive for the machinery and equipment as a whole.
- For the servo motor (24 VDC) specification, EMC compliance was tested by installing a noise filter set (LEC-NFA). Refer to page 61 for the noise filter set. Refer to the LECA Operation Manual for installation.

[UL-compliant products]

When conformity to UL is required, the electric actuator and controller/driver should be used with a UL1310 Class 2 power supply.

	Power consumption [W] ^{Note 9)}		4		3.6		5	
	Rated voltage [V]		24 VDC ±10%					

Note 1) Speed changes according to the work load. Check "Speed-Work Load Graph (Guide)" on page 2.

Note 2) Pushing force accuracy is ±20% (F.S.).

Note 3) The speed and force may change depending on the cable length, load and mounting conditions. Furthermore, if the cable length exceeds 5 m, then it will decrease by up to 10% for each 5 m. (At 15 m: Reduced by up to 20%)

Note 4) Vibration resistance: No malfunction occurred in a test ranging between 45 to 2000 Hz. Test was performed in both an axial direction and a perpendicular direction to the lead screw. (Test was performed with the actuator in the initial state.)

Impact resistance: No malfunction occurred when the actuator was tested with a drop tester in both an axial direction and a perpendicular direction to the lead screw. (Test was performed with the actuator in the initial state.)

Note 5) The power consumption (including the controller) is for when the actuator is operating.

Note 6) The standby power consumption when operating (including the controller) is for when the actuator is stopped in the set position during the operation. Except during the pushing operation.

Note 7) The maximum instantaneous power consumption (including the controller) is for when the actuator is operating. This value can be used for the selection of the power supply.

Note 8) With lock only

Note 9) For an actuator with lock, add the power consumption for the lock.

Note 1) Range within which the table can move when it returns to origin.

Make sure a workpiece mounted on the table does not interfere with the workpieces and facilities around the table.

Note 2) Position after return to origin.

Note 3) The number in brackets indicates when the direction of return to origin has changed.

Note 4) If workpiece fixing bolts are too long, they can touch the guide block and cause a malfunction, etc.

Use bolts that are between the maximum and minimum screw-in depths in length.

Electric Slide Table/High Rigidity Type Series **LESH** Model Selection 1

Step Motor (Servo/24 VDC)

Servo Motor (24 VDC)

Selection Procedure

For the compact type LES series, refer to page 1.

Step 1 Check the work load–speed.

Step 2 Check the cycle time.

Step 3 Check the allowable moment.

Selection Example

Step 1 Check the work load–speed. <Speed–Work load graph> (Page 26)

Select the target model based on the workpiece mass and speed with reference to the <Speed–Work load graph>.

Selection example) The **LESH16□J-50** is temporarily selected based on the graph shown on the right side.

Step 2 Check the cycle time.

It is possible to obtain an approximate cycle time by using method 1, but if a more detailed cycle time is required, use method 2.

* Although it is possible to make a suitable selection by using method 1, this calculation is based on a maximum load condition. Therefore, if a more detailed selection for each load is required, use method 2.

Method 1: Check the cycle time graph. (Page 27)

Method 2: Calculation <Speed–Work load graph> (Page 26)

Calculate the cycle time using the following calculation method.

Calculation example)

T1 to T4 can be calculated as follows.

Cycle time:

T can be found from the following equation.

$$T = T1 + T2 + T3 + T4 \text{ [s]}$$

- T1: Acceleration time and T3: Deceleration time can be obtained by the following equation.

$$T1 = V/a1 \text{ [s]}$$

$$T3 = V/a2 \text{ [s]}$$

- T2: Constant speed time can be found from the following equation.

$$T2 = \frac{L - 0.5 \cdot V \cdot (T1 + T3)}{V} \text{ [s]}$$

- T4: Settling time varies depending on the conditions such as motor types, load and in positioning of the step data. Therefore, please calculate the settling time with reference to the following value.

$$T4 = 0.15 \text{ [s]}$$

$$T1 = V/a1 = 220/5000 = 0.04 \text{ [s]}$$

$$T3 = V/a2 = 220/5000 = 0.04 \text{ [s]}$$

$$T2 = \frac{L - 0.5 \cdot V \cdot (T1 + T3)}{V} = \frac{50 - 0.5 \cdot 220 \cdot (0.04 + 0.04)}{220} = 0.19 \text{ [s]}$$

$$T4 = 0.15 \text{ [s]}$$

Therefore, the cycle time can be obtained as follows.

$$T = T1 + T2 + T3 + T4 = 0.04 + 0.19 + 0.04 + 0.15 = 0.42 \text{ [s]}$$

Operating conditions

- Workpiece mass: 1 [kg]
- Workpiece mounting condition:
- Speed: 220 [mm/s]
- Mounting orientation: Vertical
- Stroke: 50 [mm]
- Acceleration/Deceleration: 5,000 [mm/s²]
- Cycle time: 0.5 seconds

LESH16□/Step Motor Vertical

<Speed–Work load graph>

LESH16□/Step Motor

<Cycle time>

LESH16/Pitching

<Dynamic allowable moment>

Step 3 Check the allowable moment. <Static allowable moment> (Page 27)

<Dynamic allowable moment> (Page 28)

Confirm the moment that applies to the actuator is within the allowable range for both static and dynamic conditions.

Based on the above calculation result, the **LESH16□J-50** is selected.

Electric Slide Table/High Rigidity Type Series **LESH** Model Selection 2

Step Motor (Servo/24 VDC)

Servo Motor (24 VDC)

Selection Procedure For the compact type LES series, refer to page 5.

Selection Example

Operating conditions

- Pushing force: 90 [N]
- Workpiece mass: 1 [kg]
- Speed: 100 [mm/s]
- Stroke: 100 [mm]
- Mounting orientation: Vertical upward
- Pushing time + Operation (A): 1.5 seconds
- All cycle time (B): 6 seconds

Step 1 Check the required force.

Calculate the approximate required force for pushing operation.
Selection example) • Pushing force: 90 [N]
• Workpiece mass: 1 [kg]
Therefore, the approximate required force can be obtained as $90 + 10 = 100$ [N].

Select the target model based on the approximate required force with reference to the specifications (Pages 35 and 36).
Selection example) Based on the specifications,
• Approximate required force: 100 [N]
• Speed: 100 [mm/s]
Therefore, the **LESH25□** is temporarily selected.

Then, calculate the required force for pushing operation.
If the mounting position is vertical upward, add the actuator table weight.
Selection example) Based on the <Table weight>,
• **LESH25□** table weight: 1.3 [kg]
Therefore, the required force can be obtained as $100 + 13 = 113$ [N].

Step 2 Check the set value of pushing force.

<Set value of pushing force–Force graph> (Page 30)
Select the target model based on the required force with reference to the <Set value of pushing force–Force graph>, and confirm the set value of pushing force.
Selection example) Based on the graph shown on the right side,
• Required force: 113 [N]
Therefore, the **LESH25□K** is temporarily selected.
This set value of pushing force is 40 [%].

Step 3 Check the duty ratio.

Confirm the allowable duty ratio based on the set value of pushing force with reference to the <Allowable duty ratio>.
Selection example) Based on the <Allowable duty ratio>,
• Set value of pushing force: 40 [%]
Therefore, the allowable duty ratio can be obtained as 30 [%].

Calculate the duty ratio for operating conditions, and confirm it does not exceed the allowable duty ratio.
Selection example) • Pushing time + Operation (A): 1.5 seconds
• All cycle time (B): 6 seconds
Therefore, the duty ratio can be obtained as $1.5/6 \times 100 = 25$ [%], and this is the allowable range.

Based on the above calculation result, the **LESH25□K-100** is selected.
For allowable moment, the selection procedure is the same as the positioning control.

Table Weight

[kg]

Model	Stroke [mm]

Caution

[CE-compliant products]

① EMC compliance was tested by combining the electric actuator LESH series and the controller LEC series. The EMC depends on the configuration of the customer's control panel and the relationship with other electrical equipment and wiring. Therefore conformity to the EMC directive cannot be certified for SMC components incorporated into the customer's equipment under actual operating conditions. As a result it is necessary for the customer to verify conformity to the EMC directive for the machinery and equipment as a whole.

② For the servo motor (24 VDC) specification, EMC compliance was tested by installing a noise filter set (LEC-NFA). Refer to page 61 for the noise filter set. Refer to the LECA Operation Manual for installation.

[UL-compliant products]

When conformity to UL is required, the electric actuator and controller/driver should be used with a UL1310 Class 2 power supply.

Model		LESH8□		LESH16□		LESH25□		
Actuator specifications	Stroke [mm]		50, 75		50, 100		50, 100, 150	
	Work load [kg] <small>Note 1) 3)</small>	Horizontal	2	1	6	4	9	6
		Vertical	0.5	0.25	2	1	4	2
	Pushing force [N] 30% to 70% <small>Note 2) 3)</small>		6 to 15	4 to 10	23.5 to 55	15 to 35	77 to 180	43 to 100
	Speed [mm/s] <small>Note 1) 3)</small>		10 to 200	20 to 400	10 to 200	20 to 400	10 to 150	20 to 400
	Pushing speed [mm/s]		10 to 20	20	10 to 20	20	10 to 20	20
	Max. acceleration/deceleration [mm/s ²]		5,000					
	Positioning repeatability [mm]		±0.05					
	Screw lead [mm]		4	8	5	10	8	16
	Impact/Vibration resistance [m/s ²] <small>Note 4)</small>		50/20					
	Actuation type		Slide screw + Belt (R/L type), Slide screw (D type)					
	Guide type		Linear guide (Circulating type)					
Operating temperature range [°C]		5 to 40						
Operating humidity range [%RH]		90 or less (No condensation)						
Electric specifications	Motor size		□20		□28		□42	
	Motor type		Step motor (Servo/24 VDC)					
	Encoder		Incremental A/B phase (800 pulse/rotation)					
	Rated voltage [V]		24 VDC ±10%					
	Power consumption [W] <small>Note 5)</small>		20		43		67	
	Standby power consumption when operating [W] <small>Note 6)</small>		7		15		13	
	Max. instantaneous power consumption [W] <small>Note 7)</small>		35		60		74	
	Lock unit specifications	Type	Non-magnetizing lock					
Holding force [N]		Note 8)	24	2.5	300	48	500	77
Power consumption [W] <small>Note 9)</small>			4		3.6		5	
Rated voltage [V]			24 VDC ±10%					

Note 1) Speed changes according to the work load. Check "Speed-Work Load Graph (Guide)" on page 26.

Note 2) Pushing force accuracy is ±20% (F.S.).

Note 3) The speed and force may change depending on the cable length, load and mounting conditions. Furthermore, if the cable length exceeds 5 m, then it will decrease by up to 10% for each 5 m. (At 15 m: Reduced by up to 20%)

Note 4) Vibration resistance: No malfunction occurred in a test ranging between 45 to 2000 Hz. Test was performed in both an axial direction and a perpendicular direction to the lead screw. (Test was performed with the actuator in the initial state.)

Impact resistance: No malfunction occurred when the actuator was tested with a drop tester in both an axial direction and a perpendicular direction to the lead screw. (Test was performed with the actuator in the initial state.)

Note 5) The power consumption (including the controller) is for when the actuator is operating.

Note 6) The standby power consumption when operating (including the controller) is for when the actuator is stopped in the set position during the operation. Except during the pushing operation.

Note 7) The maximum instantaneous power consumption (including the controller) is for when the actuator is operating. This value can be used for the selection of the power supply.

Note 8) With lock only

Note 9) For an actuator with lock, add the power consumption for the lock.

Electric Slide Tables/ Specific Product Precautions 1

Be sure to read before handling. Refer to back cover for Safety Instructions and the Operation Manual for Electric Actuator Precautions.
Please download it via our website, <http://www.smcworld.com>

Design

⚠ Caution

- Do not apply a load in excess of the operating limit.**
Select a suitable actuator by load and allowable moment. If the product is used outside of the operating limit, the eccentric load applied to the guide will be excessive and have adverse effects such as creating play on the guide, degrading accuracy and shortening the life of the product.
- Do not use the product in applications where excessive external force or impact force is applied to it.**
This can cause failure.

Handling

⚠ Caution

- INP output signal**
 - Positioning operation**
When the product comes within the set range by step data [In position], the INP output signal will turn on.
Initial value: Set to [0.50] or higher.
 - Pushing operation**
When the effective force exceeds step data [Trigger LV], the INP output signal will turn on. Use the product within the specified range of [Pushing force] and [Trigger LV].
To ensure that the actuator pushes the workpiece with the set [Pushing force], it is recommended that the [Trigger LV] be set to the same value as the [Pushing force].
- When the pushing operation is used, be sure to set to [Pushing operation]. Never hit at the stroke end except during return to origin.**
It may damage and malfunction. The internal stopper can be broken by collision with the stroke end.

- Use the product with the following moving force.**
 - Step motor (Servo/24 VDC): 100%
 - Servo motor (24 VDC) : 250%

If the moving force is set below the above values, it may cause an alarm.
- The actual speed of this actuator is affected by the load.**
Check the model selection section of the catalog.
- Do not apply a load, impact or resistance in addition to the transferred load during return to origin.**
Otherwise, the origin can be displaced since it is based on detected motor torque.

Handling

⚠ Caution

- The table and guide block are made of special stainless steel. There can be rust on the product in an environment exposed to water drops.**
- Do not dent, scratch or cause other damage to the body, table and end plate mounting surfaces.**
This may cause unevenness in the mounting surface, play in the guide or an increase in the sliding resistance.
- Do not dent, scratch or cause other damage to the surface over which the rail and guide will move.**
This may cause play or an increase in the sliding resistance.
- When attaching a workpiece, do not apply strong impact or large moment.**
If an external force over the allowable moment is applied, it may cause play in the guide or an increase in the sliding resistance.
- Keep the flatness of mounting surface 0.02 mm or less.**
Unevenness of a workpiece or base mounted on the body of the product may cause play on the guide and increased sliding resistance. Do not deform the mounting surface by mounting with workpieces tucked in.
- Do not drive the main body with the table fixed.**
- When mounting the product, for R/L type fixed cable, keep the following dimension or more for bends in the cable. For D type, keep a 40 mm or longer diameter for bends in the cable.**

Series LES/LESH

Electric Slide Tables/ Specific Product Precautions 2

Be sure to read before handling. Refer to back cover for Safety Instructions and the Operation Manual for Electric Actuator Precautions.
Please download it via our website, <http://www.smcworld.com>

Handling

Caution

13. When mounting the product, use screws with adequate length and tighten them to the maximum torque or less.

Tightening the screws with a higher torque than recommended may cause a malfunction, whilst the tightening with a lower torque can cause the displacement of the mounting position or in extreme conditions the actuator could become detached from its mounting position.

Body fixed/ Side mounting (Body tapped)	Model	Bolt	Max. tightening torque (N·m)	L (Max. screw-in depth mm)
	LES8R/L	M4 x 0.7	1.5	8
	LES8D	M5 x 0.8	3	10
	LES16R/L	M6 x 1	5.2	12
	LES16D	M8 x 1.25	10	16
	LES25R/L			
	LES25D			

Body fixed/ Side mounting (Through-hole)	Model	Bolt	Max. tightening torque (N·m)	L (mm)
	LES8R/L	M3 x 0.5	0.63	23.5
	LES8D	M4 x 0.7	1.5	18.2
	LES16R/L	M5 x 0.8	3	33.5
	LES16D	M6 x 1	5.2	25.2
	LES25R/L			35.5
	LES25D			27.3

Workpiece fixed/ Front mounting	Model	Bolt	Max. tightening torque (N·m)	L (mm)
	LES8R/L	M3 x 0.5	0.63	6
	LES8D	M4 x 0.7	1.5	5.5
	LES16R/L	M5 x 0.8	3	8
	LES16D	M6 x 1	5.2	12
	LES25R/L			10
	LES25D			14

To prevent the workpiece fixing bolts from penetrating the end plate, use bolts that are 0.5 mm or shorter than the maximum screw-in depth. If long bolts are used, they can touch the end plate and cause a malfunction, etc.

Workpiece fixed/ Top mounting	Model	Bolt	Max. tightening torque (N·m)	L (Min. to Max. screw-in depth mm)
	LES8	M3 x 0.5	0.63	2.1 to 4.1
	LES8D	M4 x 0.7	1.5	5 (Max.)
	LES16	M5 x 0.8	3	2.7 to 5.7
	LES16D	M6 x 1	5.2	6.5 (Max.)
	LES25			3.3 to 7.3
	LES25D			8 (Max.)

To prevent the workpiece fixing bolts from touching the guide block, use bolts that are 0.5 mm or shorter than the maximum screw-in depth. If long bolts are used, they can touch the guide block and cause a malfunction, etc.

Body fixed/Side mounting (Side holder)

Model	Bolt	Max. tightening torque (N·m)	L (mm)
LES8D	M4 x 0.7	1.5	6.7
LES16D	M5 x 0.8	3	8.3
LES25D	M6 x 1	5.2	12

When using the side holders to install the actuator, be sure to use the positioning pin. It can be displaced when vibration or excessive external force is applied.

Positioning pin

14. In pushing operation, set the product to a position of at least 0.5 mm away from a workpiece. (This position is referred to as a pushing start position.)

If the product is set to the same position as a workpiece, the following alarms may be generated and operation may become unstable.

a. "Posn failed" alarm is generated.

The product cannot reach a pushing start position due to variation in the width of workpieces.

b. "Pushing ALM" alarm is generated.

The product is pushed back from a pushing start position after starting to push.

15. When external force is applied to the table, it is necessary to reduce the work load for the sizing.

When a cable duct or flexible moving tube is attached to the actuator, the sliding resistance of the table increases and may lead to operational failure of the product.

16. When using the side holders to install the actuator, use within the dimension range below.

Otherwise, installation balance will deteriorate and cause loosening.

Model	L (mm)
LES8D-30	5 to 10
LES8D-50	20 to 30
LES8D-75	50 to 60
LES16D-30	5 to 10
LES16D-50	20 to 30
LES16D-75	60 to 75
LES16D-100	85 to 100
LES25D-30	5 to 15
LES25D-50	25 to 35
LES25D-75	60 to 75
LES25D-100	70 to 100
LES25D-125	155 to 170
LES25D-150	160 to 180

17. For the LES□□D, do not grasp or peel off a masking tape on the bottom of the body.

The masking tape may peel off and foreign matter may get inside the actuator.

18. For the LES□□D, a gap will form between the motor flange and table when the table moves (marked with the arrow below). Be careful not to put hands or fingers in a gap.

Series LES/LESH

Electric Slide Tables/ Specific Product Precautions 3

Be sure to read before handling. Refer to back cover for Safety Instructions and the Operation Manual for Electric Actuator Precautions.
Please download it via our website, <http://www.smcworld.com>

Handling

⚠ Caution

19. When mounting the body with through-holes in the mounting orientations below, make sure to use two side holders as shown in the figures.

Otherwise, installation balance will deteriorate and cause loosening.

Bottom mounting

Wall mounting

Vertical mounting

20. Install the body as shown below with the ○.

Since the product support becomes unstable, it may cause a malfunction, irregular noise and deflection.

21. Even with the same product number, the table of some products can be moved by hand and the table of some products cannot be moved by hand. However, there is no abnormality with these products. (Without lock)

This difference is caused because there is a little variation with the positive efficiency (when the table is moved by the motor) and there is a large variation with the reverse-efficiency (when the table is moved manually) due to the product characteristics. There is hardly any difference among products when they are operated by the motor.

Maintenance

⚠ Warning

1. Ensure that the power supply is stopped before starting maintenance work or replacement of the product.
2. For lubrication, wear protective glasses.
3. Perform maintenance according to the following requirements.

• Maintenance frequency

Perform maintenance according to the table below.

Frequency	Appearance check	Belt check
Inspection before daily operation	○	—
Inspection every 6 months*	—	○
Inspection every 250 km*	—	○
Inspection every 5 million cycles*	—	○

* Select whichever comes sooner.

• Items for visual appearance check

1. Loose set screws, Abnormal dirt
2. Check of flaw and cable joint
3. Vibration, Noise

• Items for belt check (R/L type only)

Stop operation immediately and replace the belt when belt appear to be below.

a. Tooth shape canvas is worn out.

Canvas fiber becomes fuzzy. Rubber is removed and the fiber becomes whitish. Lines of fibers become unclear.

b. Peeling off or wearing of the side of the belt

Belt corner becomes round and frayed thread sticks out.

c. Belt partially cut

Belt is partially cut. Foreign matter caught in teeth other than cut part causes flaw.

d. Vertical line of belt teeth

Flaw which is made when the belt runs on the flange.

e. Rubber back of the belt is softened and sticky.

f. Crack on the back of the belt

It is recommended that the belt be replaced after being in service for 2 years, or before reaching the following distance.

How to Order

⚠ Caution

[CE-compliant products]

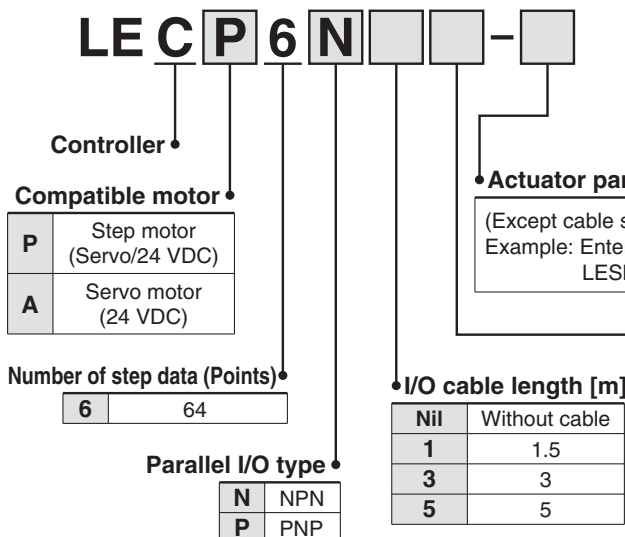

① EMC compliance was tested by combining the electric actuator LESH series and the controller LEC series.

The EMC depends on the configuration of the customer's control panel and the relationship with other electrical equipment and wiring. Therefore conformity to the EMC directive cannot be certified for SMC components incorporated into the customer's equipment under actual operating conditions. As a result it is necessary for the customer to verify conformity to the EMC directive for the machinery and equipment as a whole.

② For the LECA6 series (servo motor controller), EMC compliance was tested by installing a noise filter set (LEC-NFA). Refer to page 61 for the noise filter set. Refer to the LECA Operation Manual for installation.

[UL-compliant products]

When conformity to UL is required, the electric actuator and controller should be used with a UL1310 Class 2 power supply.

* When controller equipped type is selected when ordering the LE series, you do not need to order this controller.

The controller is sold as single unit after the compatible actuator is set.

Confirm that the combination of the controller and the actuator is correct.

<Check the following before use.>

- ① Check the actuator label for model number. This matches the controller.
- ② Check Parallel I/O configuration matches (NPN or PNP).

* Refer to the operation manual for using the products. Please download it via our website, <http://www.smcworld.com>

Specifications

Basic Specifications

Item	LECP6	LECA6
Compatible motor	Step motor (Servo/24 VDC)	Servo motor (24 VDC)
Power supply <small>Note 1)</small>	Power voltage: 24 VDC $\pm 10\%$ Current consumption: 3 A (Peak 5 A) <small>Note 2)</small> [Including motor drive power, control power, stop, lock release]	Power voltage: 24 VDC $\pm 10\%$ Current consumption: 3 A (Peak 10 A) <small>Note 2)</small> [Including motor drive power, control power, stop, lock release]
Parallel input	11 inputs (Photo-coupler isolation)	
Parallel output	13 outputs (Photo-coupler isolation)	
Compatible encoder	Incremental A/B phase (800 pulse/rotation)	Incremental A/B/Z phase (800 pulse/rotation)
Serial communication	RS485 (Modbus protocol compliant)	
Memory	EEPROM	
LED indicator	LED (Green/Red) one of each	
Lock control	Forced-lock release terminal <small>Note 3)</small>	
Cable length [m]	I/O cable: 5 or less, Actuator cable: 20 or less	
Cooling system	Natural air cooling	
Operating temperature range [°C]	0 to 40 (No freezing)	
Operating humidity range [%RH]	90 or less (No condensation)	
Storage temperature range [°C]	-10 to 60 (No freezing)	
Storage humidity range [%RH]	90 or less (No condensation)	
Insulation resistance [MΩ]	Between the housing and SG terminal 50 (500 VDC)	
Weight [g]	150 (Screw mounting) 170 (DIN rail mounting)	

Note 1) Do not use the power supply of "inrush current prevention type" for the controller power supply. When conformity to UL is required, the electric actuator and controller should be used with a UL1310 Class 2 power supply.

Note 2) The power consumption changes depending on the actuator model. Refer to the specifications of actuator for more details.

Note 3) Applicable to non-magnetizing lock.

How to Mount

a) Screw mounting (LEC□6□□-□) (Installation with two M4 screws)

b) DIN rail mounting (LEC□6□□D-□) (Installation with the DIN rail)

Note) When size 25 or more of the LES series are used, the space between the controllers should be 10 mm or more.

DIN rail AXT100-DR-□

* For □, enter a number from the "No." line in the table below.
 Refer to the dimensions on page 55 for the mounting dimensions.

Wiring Example 1

Power Supply Connector: CN1 * Power supply plug is an accessory.

CN1 Power Supply Connector Terminal for LECP6 (PHOENIX CONTACT FK-MC0.5/5-ST-2.5)

Terminal name	Function	Details
0V	Common supply (-)	M24V terminal/C24V terminal/EMG terminal/BK RLS terminal are common (-).
M24V	Motor power supply (+)	Motor power supply (+) supplied to the controller
C24V	Control power supply (+)	Control power supply (+) supplied to the controller
EMG	Stop (+)	Input (+) for releasing the stop
BK RLS	Lock release (+)	Input (+) for releasing the lock

Power supply plug for LECP6

CN1 Power Supply Connector Terminal for LECA6 (PHOENIX CONTACT FK-MC0.5/7-ST-2.5)

Terminal name	Function	Details
0V	Common supply (-)	M24V terminal/C24V terminal/EMG terminal/BK RLS terminal are common (-).
M24V	Motor power supply (+)	Motor power supply (+) supplied to the controller
C24V	Control power supply (+)	Control power supply (+) supplied to the controller
EMG	Stop (+)	Input (+) for releasing the stop
BK RLS	Lock release (+)	Input (+) for releasing the lock
RG+	Regenerative output 1	Regenerative output terminals for external connection
RG-	Regenerative output 2	(Not necessary to connect them in the combination with the LE series standard specifications.)

Power supply plug for LECA6

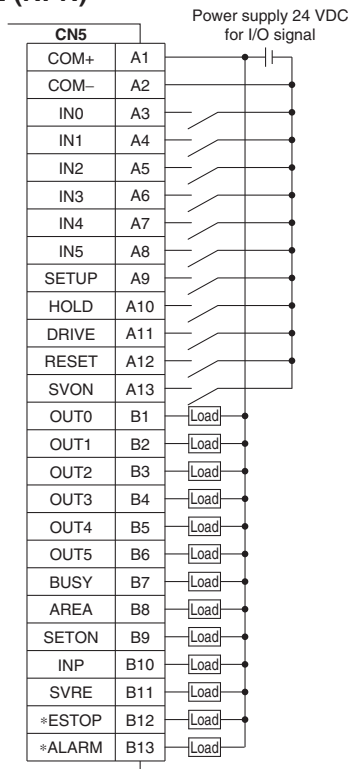

Wiring Example 2

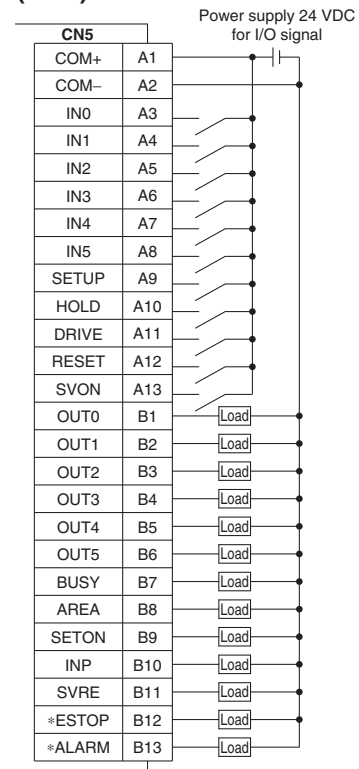

Parallel I/O Connector: CN5 * When you connect a PLC, etc., to the CN5 parallel I/O connector, please use the I/O cable (LEC-CN5-□).
* The wiring should be changed depending on the type of the parallel I/O (NPN or PNP).

Wiring diagram

LEC□6N□□-□ (NPN)

LEC□6P□□-□ (PNP)

Input Signal

Name	Details
COM+	Connects the power supply 24 V for input/output signal
COM-	Connects the power supply 0 V for input/output signal
IN0 to IN5	Step data specified Bit No. (Input is instructed in the combination of IN0 to 5.)
SETUP	Instruction to return to origin
HOLD	Operation is temporarily stopped
DRIVE	Instruction to drive
RESET	Alarm reset and operation interruption
SVON	Servo ON instruction

Output Signal

Name	Details
OUT0 to OUT5	Outputs the step data no. during operation
BUSY	Outputs when the actuator is moving
AREA	Outputs within the step data area output setting range
SETON	Outputs when returning to origin
INP	Outputs when target position or target force is reached (Turns on when the positioning or pushing is completed.)
SVRE	Outputs when servo is on
*ESTOP (Note)	Not output when EMG stop is instructed
*ALARM (Note)	Not output when alarm is generated

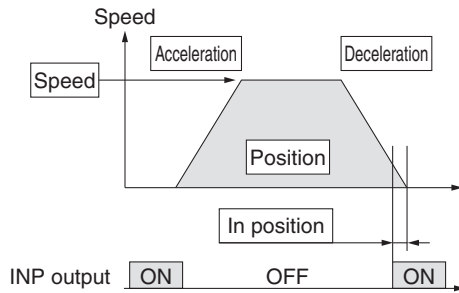

(Note) Signal of negative-logic circuit (N.C.)

Step Data Setting

1. Step data setting for positioning

In this setting, the actuator moves toward and stops at the target position.

The following diagram shows the setting items and operation. The setting items and set values for this operation are stated below.

◎ : Need to be set.
○ : Need to be adjusted as required.
— : Setting is not required.

Step Data (Positioning)

Necessity	Item	Details
◎	Movement MOD	When the absolute position is required, set Absolute. When the relative position is required, set Relative.
◎	Speed	Transfer speed to the target position
◎	Position	Target position
○	Acceleration	Parameter which defines how rapidly the actuator reaches the speed set. The higher the set value, the faster it reaches the speed set.
○	Deceleration	Parameter which defines how rapidly the actuator comes to stop. The higher the set value, the quicker it stops.
◎	Pushing force	Set 0. (If values 1 to 100 are set, the operation will be changed to the pushing operation.)
—	Trigger LV	Setting is not required.
—	Pushing speed	Setting is not required.
○	Moving force	Max. torque during the positioning operation (No specific change is required.)
○	Area 1, Area 2	Condition that turns on the AREA output signal.
○	In position	Condition that turns on the INP output signal. When the actuator enters the range of [in position], the INP output signal turns on. (It is unnecessary to change this from the initial value.) When it is necessary to output the arrival signal before the operation is completed, make the value larger.

2. Step data setting for pushing

The actuator moves toward the pushing start position, and when it reaches that position, it starts pushing with the set force or less.

The following diagram shows the setting items and operation. The setting items and set values for this operation are stated below.

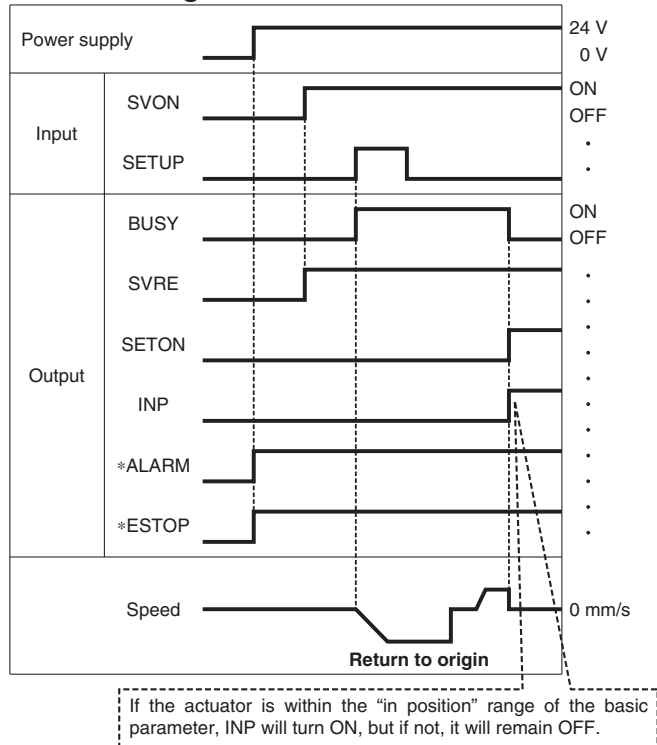

◎ : Need to be set.
○ : Need to be adjusted as required.

Step Data (Pushing)

Necessity	Item	Details
◎	Movement MOD	When the absolute position is required, set Absolute. When the relative position is required, set Relative.
◎	Speed	Transfer speed to the pushing start position
◎	Position	Pushing start position
○	Acceleration	Parameter which defines how rapidly the actuator reaches the speed set. The higher the set value, the faster it reaches the speed set.
○	Deceleration	Parameter which defines how rapidly the actuator comes to stop. The higher the set value, the quicker it stops.
◎	Pushing force	Pushing force ratio is defined. The setting range differs depending on the electric actuator type. Refer to the operation manual for the electric actuator.
◎	Trigger LV	Condition that turns on the INP output signal. The INP output signal turns on when the generated force exceeds the value. Trigger level should be the pushing force or less.
○	Pushing speed	Pushing speed during pushing. When the speed is set fast, the electric actuator and workpieces might be damaged due to the impact when they hit the end, so this set value should be smaller. Refer to the operation manual for the electric actuator.
○	Moving force	Max. torque during the positioning operation (No specific change is required.)
○	Area 1, Area 2	Condition that turns on the AREA output signal.
◎	In position	Transfer distance during pushing. If the transferred distance exceeds the setting, it stops even if it is not pushing. If the transfer distance is exceeded, the INP output signal will not turn on.

Signal Timing

Return to Origin

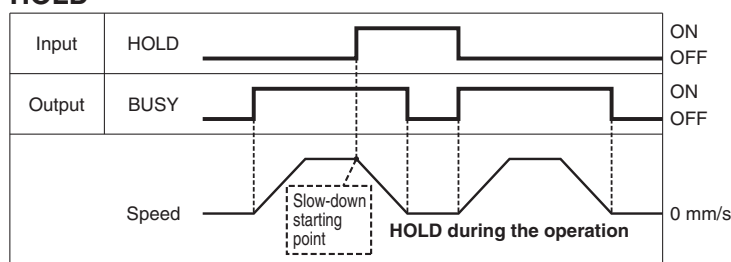

*"ALARM" and "*ESTOP" are expressed as negative-logic circuit.

Positioning Operation

*"OUT" is output when "DRIVE" is changed from ON to OFF.
 (When power supply is applied, "DRIVE" or "RESET" is turned ON or "*ESTOP" is turned OFF, all of the "OUT" outputs are OFF.)

HOLD

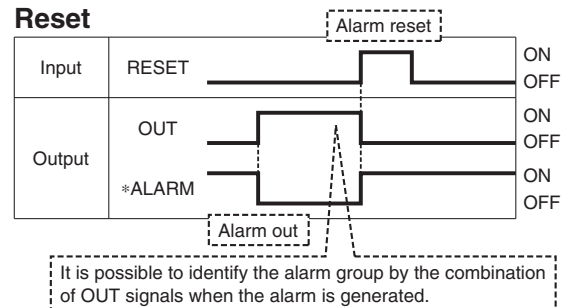

* When the actuator is in the positioning range in the pushing operation, it does not stop even if HOLD signal is input.

Pushing Operation

Reset

* "ALARM" is expressed as negative-logic circuit.

Controller Setting Kit/LEC-W2

How to Order

LEC-W2

Controller setting kit
(Japanese and English are available.)

Contents

- ① Controller setting software (CD-ROM)
- ② Communication cable
- ③ USB cable
(Cable between the PC and the conversion unit)

Compatible Controllers/Driver

Step motor controller (Servo/24 VDC)	Series LECP6
Servo motor controller (24 VDC)	Series LECA6
Step motor driver (Pulse input type)	Series LECPA

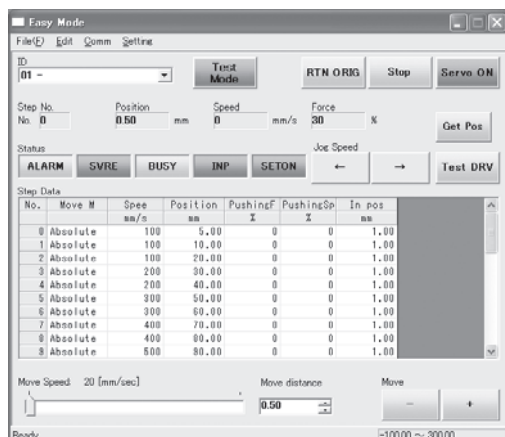

Hardware Requirements

OS	IBM PC/AT compatible machine running Windows®XP (32-bit), Windows®7 (32-bit and 64-bit).
Communication interface	USB 1.1 or USB 2.0 ports
Display	XGA (1024 x 768) or more

* Windows® and Windows®7 are registered trademarks of Microsoft Corporation in the United States.
* Refer to SMC website for version update information, <http://www.smcworld.com>

Screen Example

Easy mode screen example

Easy operation and simple setting

- Allowing to set and display actuator step data such as position, speed, force, etc.
- Setting of step data and testing of the drive can be performed on the same page.
- Can be used to jog and move at a constant rate.

Normal mode screen example

Detailed setting

- Step data can be set in detail.
- Signals and terminal status can be monitored.
- Parameters can be set.
- JOG and constant rate movement, return to origin, test operation and testing of forced output can be performed.

How to Order

LEC-T1-3 J G

Teaching box

Cable length [m]
3 3

Initial language

J	Japanese
E	English

Enable switch

Nil	None
S	Equipped with enable switch

* Interlock switch for jog and test function

Stop switch

G	Equipped with stop switch
---	---------------------------

* The displayed language can be changed to English or Japanese.

Specifications

Item	Description
Switch	Stop switch, Enable switch (Option)
Cable length [m]	3
Enclosure	IP64 (Except connector)
Operating temperature range [°C]	5 to 50
Operating humidity range [%RH]	90 or less (No condensation)
Weight [g]	350 (Except cable)

[CE-compliant products]

The EMC compliance of the teaching box was tested with the LEC6 series step motor controller (servo/24 VDC) and an applicable actuator.

[UL-compliant products]

When conformity to UL is required, the electric actuator and controller should be used with a UL1310 Class 2 power supply.

Standard functions

- Chinese character display
- Stop switch is provided.

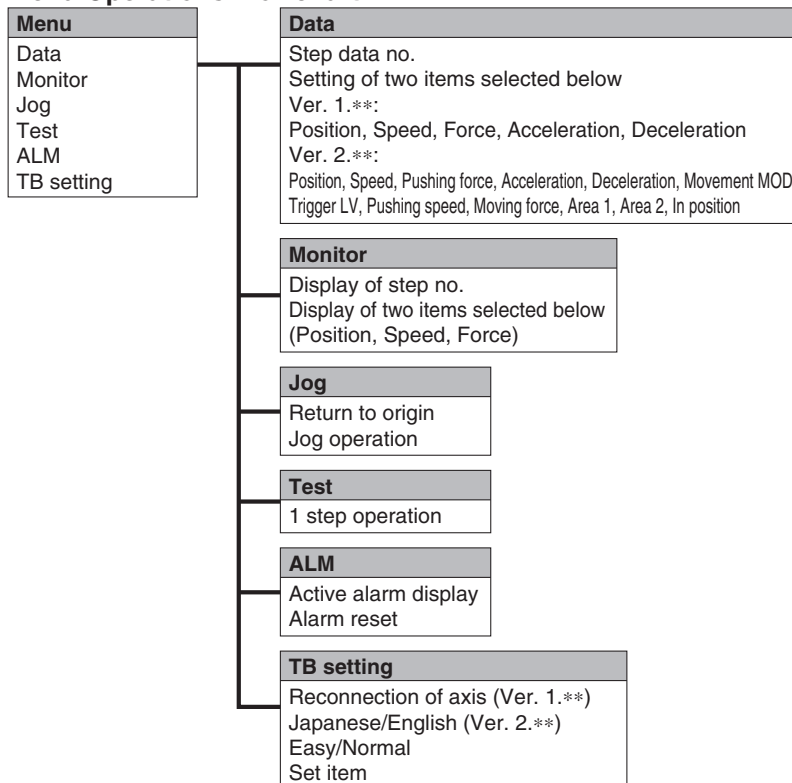

Option

- Enable switch is provided.

Easy Mode

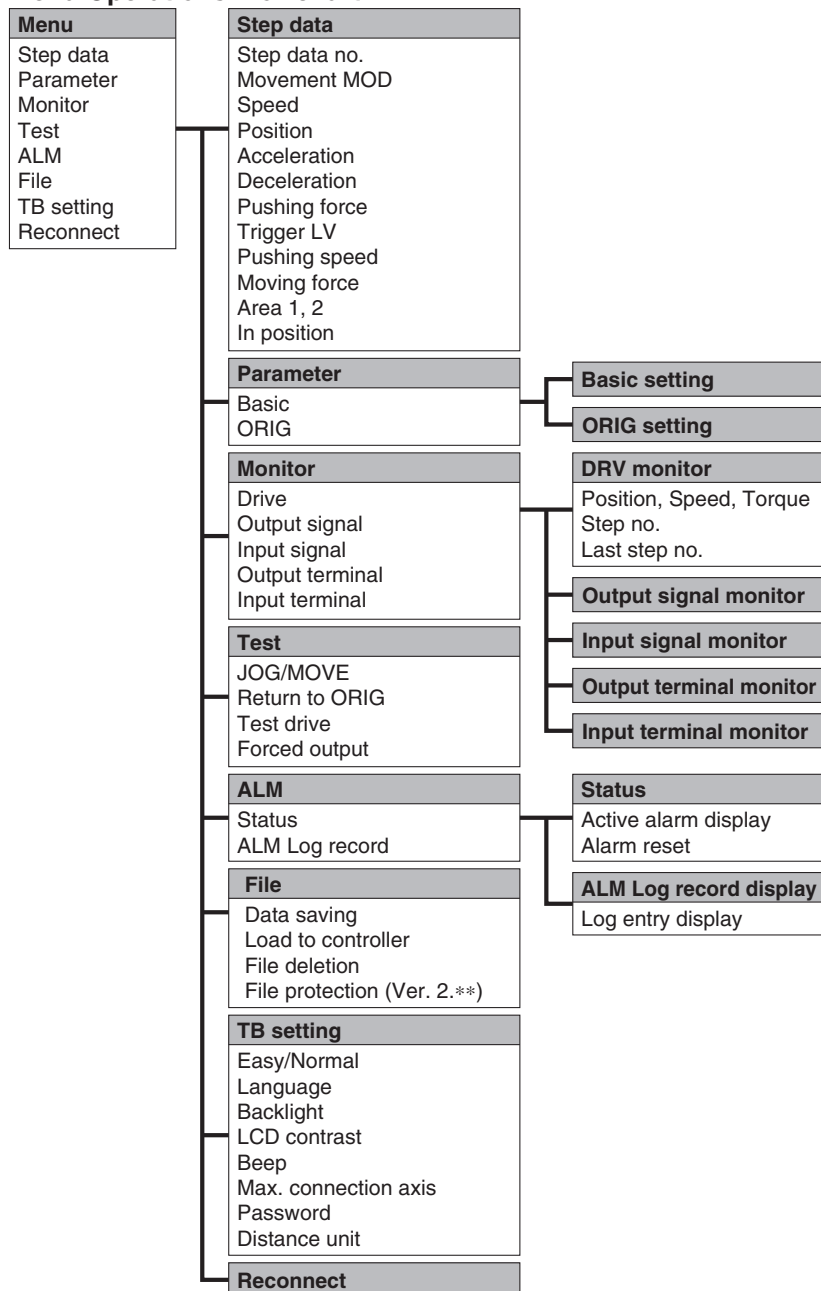

Function	Details
Step data	• Setting of step data
Jog	• Jog operation • Return to origin
Test	• 1 step operation • Return to origin
Monitor	• Display of axis and step data no. • Display of two items selected from Position, Speed, Force.
ALM	• Active alarm display • Alarm reset
TB setting	• Reconnection of axis (Ver. 1.**) • Displayed language setting (Ver. 2.**) • Setting of easy/normal mode • Setting step data and selection of items from easy mode monitor

Menu Operations Flowchart

Normal Mode

Function	Details

No.	Description	Function
1	LCD	A screen of liquid crystal display (with backlight)
2	Ring	A ring for hanging the teaching box
3	Stop switch	When switch is pushed in, the switch locks and stops. The lock is released when it is turned to the right.
4	Stop switch guard	A guard for the stop switch
5	Enable switch (Option)	Prevents unintentional operation (unexpected operation) of the jog test function. Other functions such as data change are not covered.
6	Key switch	Switch for each input
7	Cable	Length: 3 meters
8	Connector	A connector connected to CN4 of the controller

Gateway Unit Series *LEC-G*

How to Order

⚠ Caution

[CE-compliant products]

EMC compliance was tested by combining the electric actuator LES/LESH series and the controller LEC series.

The EMC depends on the configuration of the customer's control panel and the relationship with other electrical equipment and wiring. Therefore conformity to the EMC directive cannot be certified for SMC components incorporated into the customer's equipment under actual operating conditions. As a result it is necessary for the customer to verify conformity to the EMC directive for the machinery and equipment as a whole.

[UL-compliant products]

When conformity to UL is required, the electric actuator and controller should be used with a UL1310 Class 2 power supply.

Gateway unit **LEC-G MJ2**

Applicable Fieldbus protocols

MJ2	CC-Link Ver. 2.0

Note 1) Please note that the version is subject to change.

Note 2) Each file can be downloaded from the SMC website, <http://www.smcworld.com>

Note 3) When using a teaching box (LEC-T1-□), set the communication speed to 115.2 kbps.

Note 4) A communication response time for 1 controller is approximately 30 ms.

Refer to "Communication Response Time Guideline" for response times when several controllers are connected.

Note 5) For step data input, up to 12 controllers connectable.

Note 6) When conformity to UL is required, the electric actuator and controller should be used with a UL1310 Class 2 power supply.

Communication Response Time Guideline

Response time between gateway unit and controllers depends on the number of controllers connected to the gateway unit. For response time, refer to the graph below.

* This graph shows delay times between gateway unit and controllers. Fieldbus network delay time is not included.

Programless Controller Series *LECP1*

How to Order

Caution

[CE-compliant products]

EMC compliance was tested by combining the electric actuator LES/LESH series and the controller LEC series. The EMC depends on the configuration of the customer's control panel and the relationship with other electrical equipment and wiring. Therefore conformity to the EMC directive cannot be certified for SMC components incorporated into the customer's equipment under actual operating conditions. As a result it is necessary for the customer to verify conformity to the EMC directive for the machinery and equipment as a whole.

[UL-compliant products]

When conformity to UL is required, the electric actuator and controller should be used with a UL1310 Class 2 power supply.

The controller is sold as single unit after the compatible actuator is set.

Confirm that the combination of the controller and the actuator is correct.

* Refer to the operation manual for using the products. Please download it via our website, <http://www.smcworld.com>

Specifications

Basic Specifications

Item	LECP1
Compatible motor	Step motor (Servo/24 VDC)
Power supply ^{Note 1)}	Power supply voltage: 24 VDC $\pm 10\%$, Max. current consumption: 3A (Peak 5A) ^{Note 2)} [Including the motor drive power, control power supply, stop, lock release]
Parallel input	6 inputs (Photo-coupler isolation)
Parallel output	6 outputs (Photo-coupler isolation)
Stop points	14 points (Position number 1 to 14(E))
Compatible encoder	Incremental A/B phase (800 pulse/rotation)
Memory	EEPROM
LED indicator	LED (Green/Red) one of each
7-segment LED display ^{Note 3)}	1 digit, 7-segment display (Red) Figures are expressed in hexadecimal ("10" to "15" in decimal number are expressed as "A" to "F")
Lock control	Forced-lock release terminal ^{Note 4)}
Cable length [m]	I/O cable: 5 or less, Actuator cable: 20 or less
Cooling system	Natural air cooling
Operating temperature range [°C]	0 to 40 (No freezing)
Operating humidity range [%RH]	90 or less (No condensation)
Storage temperature range [°C]	-10 to 60 (No freezing)
Storage humidity range [%RH]	90 or less (No condensation)
Insulation resistance [MΩ]	Between the housing and SG terminal: 50 (500 VDC)
Weight [g]	130 (Screw mounting), 150 (DIN rail mounting)

Note 1) Do not use the power supply of "inrush current prevention type" for the controller input power supply. When conformity to UL is required, the electric actuator and controller should be used with a UL1310 Class 2 power supply.

Note 2) The power consumption changes depending on the actuator model. Refer to the each actuator's operation manual etc. for details.

Note 3) "10" to "15" in decimal number are displayed as follows in the 7-segment LED.

Decimal display: 10, 11, 12, 13, 14, 15
Hexadecimal display: A, b, c, d, E, F

Note 4) Applicable to non-magnetizing lock.

Controller Details

No.	Display	Description	Details
①	PWR	Power supply LED	Power supply ON/Servo ON : Green turns on Power supply ON/Servo OFF: Green flashes
②	ALM	Alarm LED	With alarm : Red turns on Parameter setting : Red flashes
③	—	Cover	Change and protection of the mode switch (Close the cover after changing switch)
④	—	FG	Frame ground (Tighten the bolt with the nut when mounting the controller. Connect the ground wire.)
⑤	—	Mode switch	Switch the mode between manual and auto.
⑥	—	7-segment LED	Stop position, the value set by ⑧ and alarm information are displayed.
⑦	SET	Set button	Decide the settings or drive operation in Manual mode.
⑧	—	Position selecting switch	Assign the position to drive (1 to 14), and the origin position (15).
⑨	MANUAL	Manual forward button	Perform forward jog and inching.
⑩		Manual reverse button	Perform reverse jog and inching.
⑪	SPEED	Forward speed switch	16 forward speeds are available.
⑫		Reverse speed switch	16 reverse speeds are available.
⑬	ACCEL	Forward acceleration switch	16 forward acceleration steps are available.
⑭		Reverse acceleration switch	16 reverse acceleration steps are available.
⑮	CN1	Power supply connector	Connect the power supply cable.
⑯	CN2	Motor connector	Connect the motor connector.
⑰	CN3	Encoder connector	Connect the encoder connector.
⑱	CN4	I/O connector	Connect I/O cable.

How to Mount

Controller mounting shown below.

1. Mounting screw (LECP1□□-□)

(Installation with two M4 screws)

2. Grounding

Tighten the bolt with the nut when mounting the ground wire as shown below.

Note) When size 25 or more of the LES series are used, the space between the controllers should be 10 mm or more.

⚠ Caution

- M4 screws, cable with crimping terminal and tooth lock washer are not included. Be sure to carry out grounding earth in order to ensure the noise tolerance.
- Use a watchmaker's screwdriver of the size shown below when changing position switch ⑧ and the set value of the speed/acceleration switch ⑪ to ⑭.

Size

End width **L**: 2.0 to 2.4 [mm]
End thickness **W**: 0.5 to 0.6 [mm]

Step Motor Driver

Series *LECPA*

How to Order

⚠ Caution

[CE-compliant products]

① EMC compliance was tested by combining the electric actuator LES/LESH series and the LECPA series.

The EMC depends on the configuration of the customer's control panel and the relationship with other electrical equipment and wiring. Therefore conformity to the EMC directive cannot be certified for SMC components incorporated into the customer's equipment under actual operating conditions. As a result it is necessary for the customer to verify conformity to the EMC directive for the machinery and equipment as a whole.

② For the LECPA series (step motor driver), EMC compliance was tested by installing a noise filter set (LEC-NFA).

Refer to page 81 for the noise filter set. Refer to the LECPA Operation Manual for installation.

[UL-compliant products]

When conformity to UL is required, the electric actuator and driver should be used with a UL1310 Class 2 power supply.

LECP AN 1 - LESH8RJ-50

Driver type

AN	Pulse input type (NPN)
AP	Pulse input type (PNP)

Driver mounting

Nil	Screw mounting
D (Note)	DIN rail mounting

Note) DIN rail is not included.
Order it separately.

I/O cable length [m]

Nil	None
1	1.5
3	3*
5	5*

* Pulse input usable only with differential. Only 1.5 m cables usable with open collector.

Actuator part number

(Except cable specifications and actuator options)
Example: Enter "LESH8RJ-50" for the LESH8RJ-50B-R16N1.

* When controller equipped type is selected when ordering the LE series, you do not need to order this driver.

The driver is sold as single unit after the compatible actuator is set.

Confirm that the combination of the driver and the actuator is correct.

<Check the following before use.>

- ① Check the actuator label for model number.
This matches the driver.
- ② Check Parallel I/O configuration matches (NPN or PNP).

* Refer to the operation manual for using the products. Please download it via our website, <http://www.smcworld.com>

Specifications

Item	LECPA
Compatible motor	Step motor (Servo/24 VDC)
Power supply ^{Note 1)}	Power voltage: 24 VDC $\pm 10\%$ Maximum current consumption: 3 A (Peak 5 A) ^{Note 2)} [Including motor drive power, control power, stop, lock release]
Parallel input	5 inputs (Except photo-coupler isolation, pulse input terminal, COM terminal)
Parallel output	9 outputs (Photo-coupler isolation)
Pulse signal input	Maximum frequency: 60 kpps (Open collector), 200 kpps (Differential) Input method: 1 pulse mode (Pulse input in direction), 2 pulse mode (Pulse input in differing directions)
Compatible encoder	Incremental A/B phase (Encoder resolution: 800 pulse/rotation)
Serial communication	RS485 (Modbus protocol compliant)
Memory	EEPROM
LED indicator	LED (Green/Red) one of each
Lock control	Forced-lock release terminal ^{Note 3)}
Cable length [m]	I/O cable: 1.5 or less (Open collector), 5 or less (Differential) Actuator cable: 20 or less
Cooling system	Natural air cooling
Operating temperature range [°C]	0 to 40 (No freezing)
Operating humidity range [%RH]	90 or less (No condensation)
Storage temperature range [°C]	-10 to 60 (No freezing)
Storage humidity range [%RH]	90 or less (No condensation)
Insulation resistance [MΩ]	Between the housing and SG terminal: 50 (500 VDC)
Weight [g]	120 (Screw mounting), 140 (DIN rail mounting)

Note 1) Do not use the power supply of "inrush current prevention type" for the driver power supply. When conformity to UL is required, the electric actuator and driver should be used with a UL1310 Class 2 power supply.

Note 2) The power consumption changes depending on the actuator model. Refer to the specifications of actuator for more details.

Note 3) Applicable to non-magnetizing lock.

How to Mount

a) Screw mounting (LECPA□□-□)
(Installation with two M4 screws)

b) DIN rail mounting (LECPA□□D-□)
(Installation with the DIN rail)

Hook the driver on the DIN rail and press the lever of section A in the arrow direction to lock it.

Note) The space between the drivers should be 10 mm or more.

DIN rail
AXT100-DR-□

* For □, enter a number from the “No.” line in the table below.
Refer to the dimensions on page 77 for the mounting dimensions.

L Dimension [mm]

No.	1	2	3	4	5	6	7	8	9	10	11	12	13	14	15	16	17	18	19	20

DIN rail mounting adapter
LEC-2-D0 (with 2 mounting screws)

This should be used when the DIN rail mounting adapter is mounted onto the screw mounting type driver afterwards.

Series **LECPA**

Dimensions

a) Screw mounting (LECPA□□-□)

b) DIN rail mounting (LECPA□□D-□)

Wiring Example 1

Power Supply Connector: CN1 * Power supply plug is an accessory.

CN1 Power Supply Connector Terminal for LECPA (PHOENIX CONTACT FK-MC0.5/5-ST-2.5)

Terminal name	Function	Details
0V	Common supply (-)	M24V terminal/C24V terminal/EMG terminal/BK RLS terminal are common (-).
M24V	Motor power supply (+)	Motor power supply (+) supplied to the driver
C24V	Control power supply (+)	Control power supply (+) supplied to the driver
EMG	Stop (+)	Input (+) for releasing the stop
BK RLS	Lock release (+)	Input (+) for releasing the lock

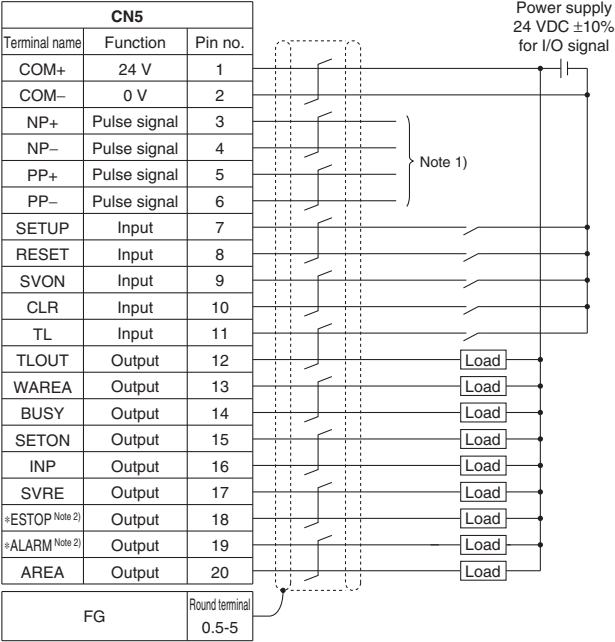

Power supply plug for LECPA

Wiring Example 2

Parallel I/O Connector: CN5 * When you connect a PLC, etc., to the CN5 parallel I/O connector, please use the I/O cable (LEC-CL5-□).
* The wiring should be changed depending on the type of the parallel I/O (NPN or PNP).

LECPAN□□-□ (NPN)

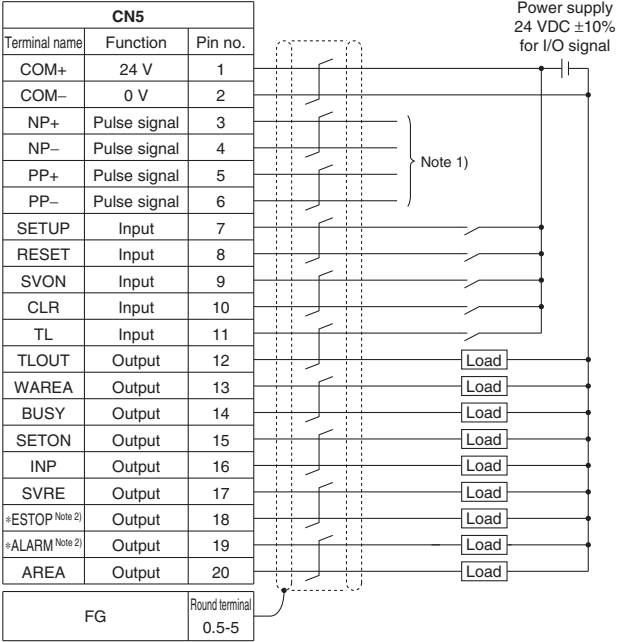

Note 1) For pulse signal wiring method, refer to "Pulse Signal Wiring Details".
Note 2) Output when the power supply of the driver is ON. (N.C.)

Input Signal

Name	Details
COM+	Connects the power supply 24 V for input/output signal
COM-	Connects the power supply 0 V for input/output signal
SETUP	Instruction to return to origin
RESET	Alarm reset
SVON	Servo ON instruction
CLR	Deviation reset
TL	Instruction to pushing operation

LECPAP□□-□ (PNP)

Output Signal

Name	Details
BUSY	Outputs when the actuator is operating
SETON	Outputs when returning to origin
INP	Outputs when target position is reached
SVRE	Outputs when servo is on
*ESTOP (Note 3)	Not output when EMG stop is instructed
*ALARM (Note 3)	Not output when alarm is generated
AREA	Outputs within the area output setting range
WAREA	Outputs within W-AREA output setting range
TLOUT	Outputs during pushing operation

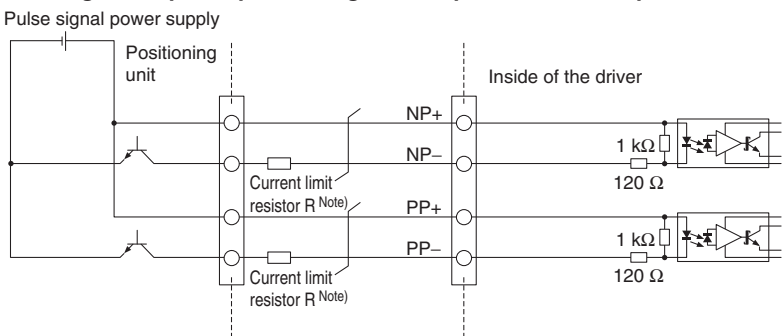

Note 3) Signal of negative-logic circuit ON (N.C.)

Pulse Signal Wiring Details

•Pulse signal output of positioning unit is differential output

•Pulse signal output of positioning unit is open collector output

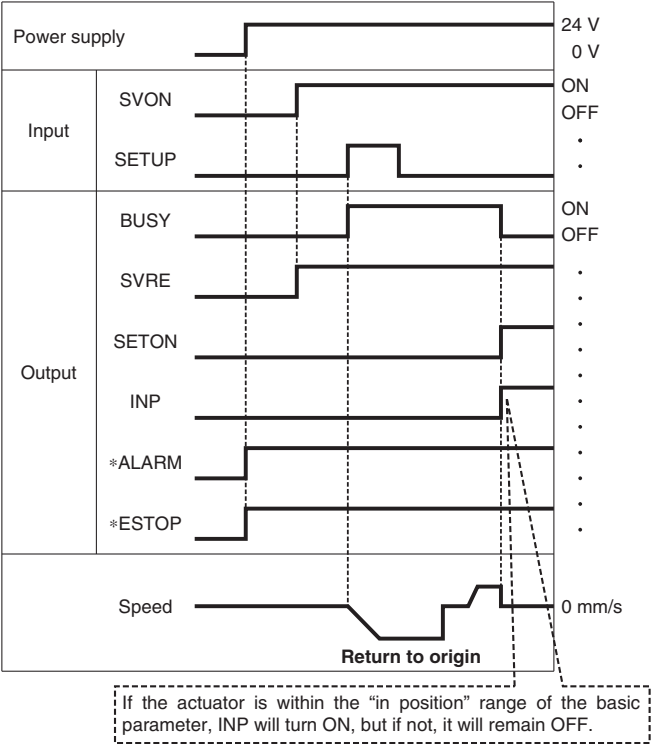

Note) Connect the current limit resistor R in series to correspond to the pulse signal voltage.

Pulse signal power supply voltage	Current limit resistor R specifications
24 VDC $\pm 10\%$	3.3 k Ω $\pm 5\%$ (0.5 W or more)
5 VDC $\pm 5\%$	390 Ω $\pm 5\%$ (0.1 W or more)

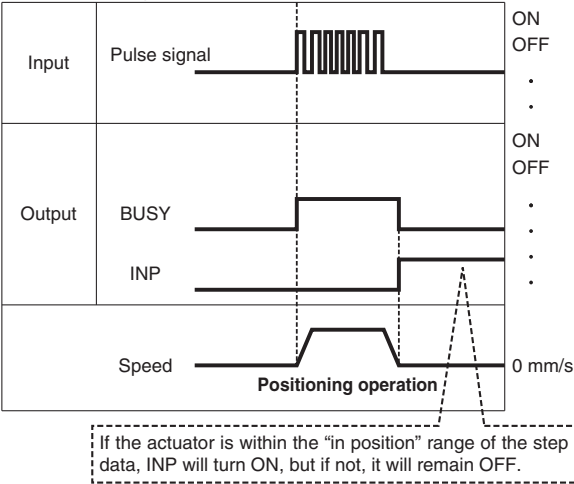

Signal Timing

Return to Origin

* "ALARM" and "ESTOP" are expressed as negative-logic circuit.

Positioning Operation

Pushing Operation

Note) If pushing operation is stopped when there is no pulse deviation, the moving part of the actuator may pulsate.

Alarm Reset

* "ALARM" is expressed as negative-logic circuit.

[Noise filter set]
Step Motor Driver (Pulse Input Type)

LEC-NFA

Contents of the set: 2 noise filters
(Manufactured by WURTH ELEKTRONIK: 74271222)

* Refer to the LECPA series Operation Manual for installation.

Controller Setting Kit/LEC-W2

How to Order

LEC-W2

Controller setting kit
(Japanese and English are available.)

Contents

- ① Controller setting software (CD-ROM)
- ② Communication cable
- ③ USB cable
(Cable between the PC and the conversion unit)

Compatible Controllers/Driver

Step motor controller (Servo/24 VDC)	Series LECP6
Servo motor controller (24 VDC)	Series LECA6
Step motor driver (Pulse input type)	Series LECPA

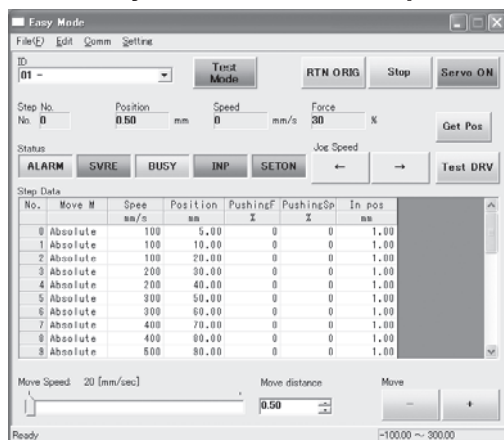

Hardware Requirements

OS	IBM PC/AT compatible machine running Windows®XP (32-bit), Windows®7 (32-bit and 64-bit).
Communication interface	USB 1.1 or USB 2.0 ports
Display	XGA (1024 x 768) or more

* Windows® and Windows®7 are registered trademarks of Microsoft Corporation in the United States.
* Refer to SMC website for version update information, <http://www.smcworld.com>

Screen Example

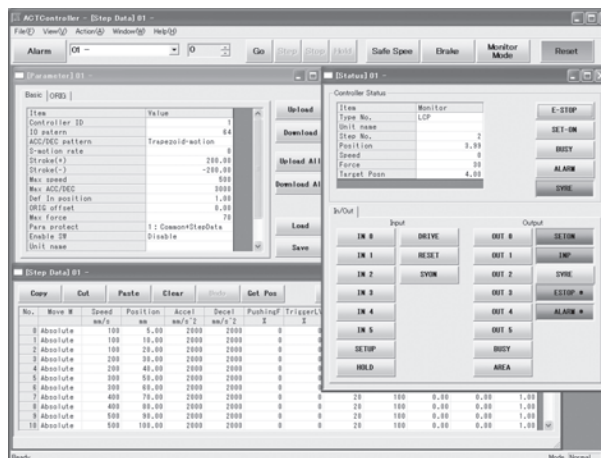

Easy mode screen example

Easy operation and simple setting

- Allowing to set and display actuator step data such as position, speed, force, etc.
- Setting of step data and testing of the drive can be performed on the same page.
- Can be used to jog and move at a constant rate.

Normal mode screen example

Detailed setting

- Step data can be set in detail.
- Signals and terminal status can be monitored.
- Parameters can be set.
- JOG and constant rate movement, return to origin, test operation and testing of forced output can be performed.

Series LEC Teaching Box/LEC-T1

How to Order

LEC-T1-3 J G

Teaching box

Cable length [m]

3 3

Initial language

J	Japanese
E	English

Enable switch

Nil	None
S	Equipped with enable switch

* Interlock switch for jog and test function

Stop switch

G Equipped with stop switch

* The displayed language can be changed to English or Japanese.

Specifications

Item	Description
Switch	Stop switch, Enable switch (Option)
Cable length [m]	3
Enclosure	IP64 (Except connector)
Operating temperature range [°C]	5 to 50
Operating humidity range [%RH]	90 or less (No condensation)
Weight [g]	350 (Except cable)

[CE-compliant products]

The EMC compliance of the teaching box was tested with the LECP6 series step motor controller (servo/24 VDC) and an applicable actuator.

[UL-compliant products]

When conformity to UL is required, the electric actuator and driver should be used with a UL1310 Class 2 power supply.

Standard functions

- Chinese character display
- Stop switch is provided.

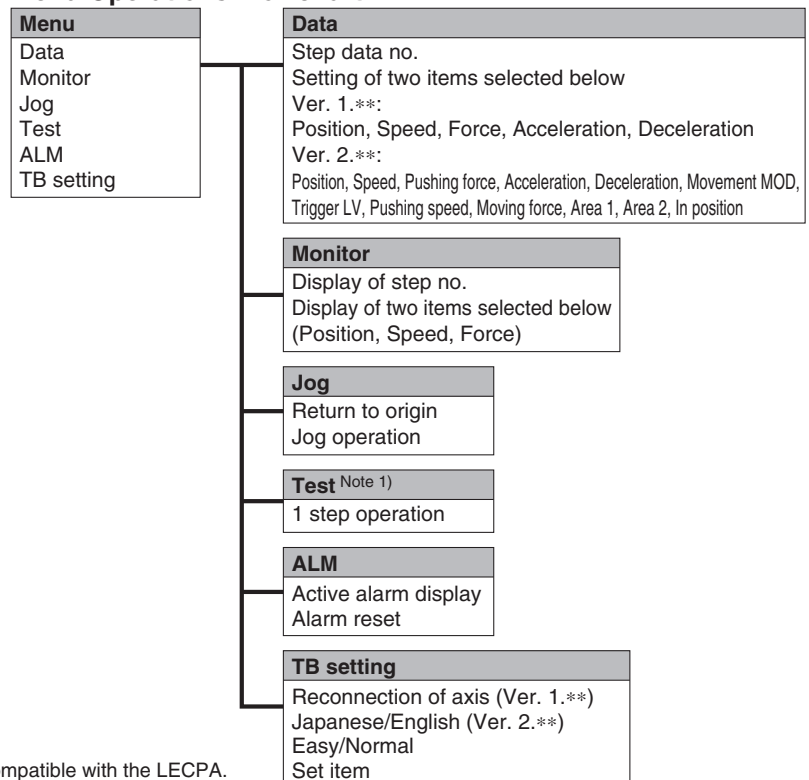

Option

- Enable switch is provided.

Easy Mode

Function	Details
Step data	• Setting of step data
Jog	• Jog operation • Return to origin
Test	• 1 step operation ^{Note 1)} • Return to origin
Monitor	• Display of axis and step data no. • Display of two items selected from Position, Speed, Force.
ALM	• Active alarm display • Alarm reset
TB setting	• Reconnection of axis (Ver. 1.**) • Displayed language setting (Ver. 2.**) • Setting of easy/normal mode • Setting step data and selection of items from easy mode monitor

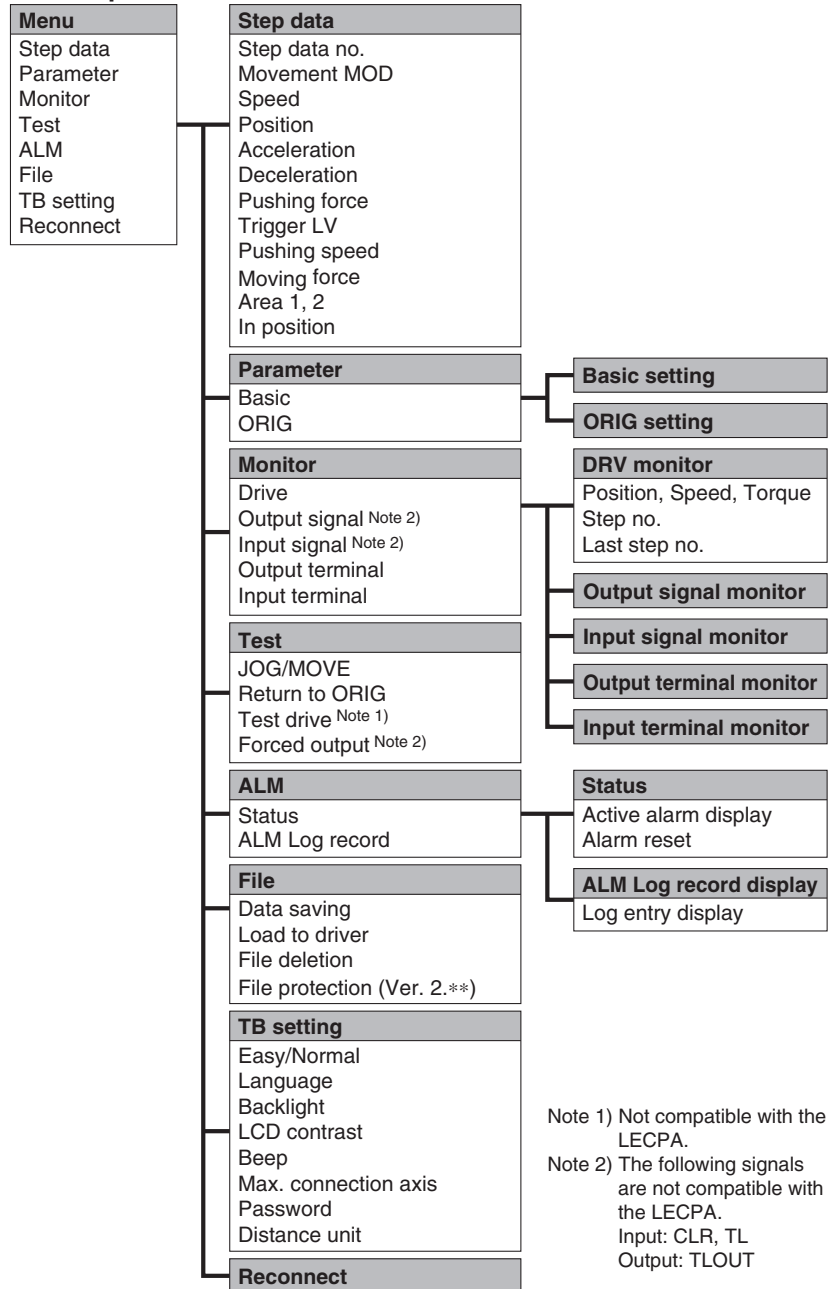

Menu Operations Flowchart

Note 1) Not compatible with the LECPA.

Normal Mode

Function	Details
Step data	• Step data setting
Parameter	• Parameters setting
Test	<ul style="list-style-type: none"> • Jog operation/Constant rate movement • Return to origin • Test drive ^{Note 1)} (Specify a maximum of 5 step data and operate.) • Forced output (Forced signal output, Forced terminal output) ^{Note 2)}
Monitor	<ul style="list-style-type: none"> • Drive monitor • Output signal monitor ^{Note 2)} • Input signal monitor ^{Note 2)} • Output terminal monitor • Input terminal monitor
ALM	<ul style="list-style-type: none"> • Active alarm display (Alarm reset) • Alarm log record display
File	<ul style="list-style-type: none"> • Data saving Save the step data and parameters of the driver which is being used for communication (it is possible to save four files, with one set of step data and parameters defined as one file). • Load to driver Loads the data which is saved in the teaching box to the driver which is being used for communication. • Delete the saved data. • File protection (Ver. 2.**)
TB setting	<ul style="list-style-type: none"> • Display setting (Easy/Normal mode) • Language setting (Japanese/English) • Backlight setting • LCD contrast setting • Beep sound setting • Max. connection axis • Distance unit (mm/inch)
Reconnect	• Reconnection of axis

Menu Operations Flowchart**Dimensions**

No.	Description	Function
1	LCD	A screen of liquid crystal display (with backlight)
2	Ring	A ring for hanging the teaching box
3	Stop switch	When switch is pushed in, the switch locks and stops. The lock is released when it is turned to the right.
4	Stop switch guard	A guard for the stop switch
5	Enable switch (Option)	Prevents unintentional operation (unexpected operation) of the jog test function. Other functions such as data change are not covered.
6	Key switch	Switch for each input
7	Cable	Length: 3 meters
8	Connector	A connector connected to CN4 of the driver

Revision history		
Edition B	* Addition of CE-compliant products	
	* P. 5: Change of speed–work load graphs	
	Change of vertical graph for LESH8R	
	Corrections of errors in horizontal and vertical graphs for LESH25R	
	* P. 13: Change of specifications, weight, power consumption, standby power consumption when operating, and maximum instantaneous power consumption	
	* P. 29: Change of dimensions of actuator cable	
	* P. 30: Addition of noise filter set	
	* P. 32: Addition of note for CE-compliant products	
	* P. 33: Change of function of enable switch	OQ
Edition C	* P. 15: Change of shape of wiring entry in dimensions	OZ
Edition D	* Addition of symmetrical type, LESH□L series	
	* Addition of in-line motor type, LESH□D series	
	* Addition of programless controller, LEC-P1 series	
	* Number of pages from 44 to 60	PY
Edition E	* Addition of compact type	
	* Addition of step motor driver, LEC-P series	
	* Addition of gateway unit, LEC-G series	
	* Number of pages from 60 to 104	RP

Safety Instructions

These safety instructions are intended to prevent hazardous situations and/or equipment damage. These instructions indicate the level of potential hazard with the labels of “**Caution**,” “**Warning**” or “**Danger**.” They are all important notes for safety and must be followed in addition to International Standards (ISO/IEC)*1), and other safety regulations.

Caution:

Caution indicates a hazard with a low level of risk which, if not avoided, could result in minor or moderate injury.

Warning:

Warning indicates a hazard with a medium level of risk which, if not avoided, could result in death or serious injury.

Danger:

Danger indicates a hazard with a high level of risk which, if not avoided, will result in death or serious injury.

- *1) ISO 4414: Pneumatic fluid power – General rules relating to systems.
ISO 4413: Hydraulic fluid power – General rules relating to systems.
IEC 60204-1: Safety of machinery – Electrical equipment of machines.
(Part 1: General requirements)
ISO 10218-1: Manipulating industrial robots – Safety.
etc.

Warning

1. The compatibility of the product is the responsibility of the person who designs the equipment or decides its specifications.

Since the product specified here is used under various operating conditions, its compatibility with specific equipment must be decided by the person who designs the equipment or decides its specifications based on necessary analysis and test results. The expected performance and safety assurance of the equipment will be the responsibility of the person who has determined its compatibility with the product. This person should also continuously review all specifications of the product referring to its latest catalog information, with a view to giving due consideration to any possibility of equipment failure when configuring the equipment.

2. Only personnel with appropriate training should operate machinery and equipment.

The product specified here may become unsafe if handled incorrectly. The assembly, operation and maintenance of machines or equipment including our products must be performed by an operator who is appropriately trained and experienced.

3. Do not service or attempt to remove product and machinery/equipment until safety is confirmed.

1. The inspection and maintenance of machinery/equipment should only be performed after measures to prevent falling or runaway of the driven objects have been confirmed.
2. When the product is to be removed, confirm that the safety measures as mentioned above are implemented and the power from any appropriate source is cut, and read and understand the specific product precautions of all relevant products carefully.
3. Before machinery/equipment is restarted, take measures to prevent unexpected operation and malfunction.

4. Contact SMC beforehand and take special consideration of safety measures if the product is to be used in any of the following conditions.

1. Conditions and environments outside of the given specifications, or use outdoors or in a place exposed to direct sunlight.
2. Installation on equipment in conjunction with atomic energy, railways, air navigation, space, shipping, vehicles, military, medical treatment, combustion and recreation, or equipment in contact with food and beverages, emergency stop circuits, clutch and brake circuits in press applications, safety equipment or other applications unsuitable for the standard specifications described in the product catalog.
3. An application which could have negative effects on people, property, or animals requiring special safety analysis.
4. Use in an interlock circuit, which requires the provision of double interlock for possible failure by using a mechanical protective function, and periodical checks to confirm proper operation.

Caution

1. The product is provided for use in manufacturing industries.

The product herein described is basically provided for peaceful use in manufacturing industries.

If considering using the product in other industries, consult SMC beforehand and exchange specifications or a contract if necessary.

If anything is unclear, contact your nearest sales branch.

Limited warranty and Disclaimer/ Compliance Requirements

The product used is subject to the following “Limited warranty and Disclaimer” and “Compliance Requirements”.

Read and accept them before using the product.

Limited warranty and Disclaimer

1. The warranty period of the product is 1 year in service or 1.5 years after the product is delivered, whichever is first.*2)
Also, the product may have specified durability, running distance or replacement parts. Please consult your nearest sales branch.
2. For any failure or damage reported within the warranty period which is clearly our responsibility, a replacement product or necessary parts will be provided.
This limited warranty applies only to our product independently, and not to any other damage incurred due to the failure of the product.
3. Prior to using SMC products, please read and understand the warranty terms and disclaimers noted in the specified catalog for the particular products.

*2) Vacuum pads are excluded from this 1 year warranty.

A vacuum pad is a consumable part, so it is warranted for a year after it is delivered.
Also, even within the warranty period, the wear of a product due to the use of the vacuum pad or failure due to the deterioration of rubber material are not covered by the limited warranty.

Compliance Requirements

1. The use of SMC products with production equipment for the manufacture of weapons of mass destruction (WMD) or any other weapon is strictly prohibited.
2. The exports of SMC products or technology from one country to another are governed by the relevant security laws and regulations of the countries involved in the transaction. Prior to the shipment of a SMC product to another country, assure that all local rules governing that export are known and followed.

Safety Instructions

Be sure to read “Handling Precautions for SMC Products” (M-E03-3) before using.

CC-Link Direct Input Type Step Motor Controller

■ CC-Link Ver. 1.10 compliant

■ 3 types of operation mode available.

Single numerical data instructions (Occupied number of stations: 1)

[Max. number of connectable controllers: 42 units]

Can be operated by instructing the Movement MOD (movement mode) and changing another item in the preset step data.

Half numerical data instructions (Occupied number of stations: 2)

[Max. number of connectable controllers: 32 units]

Can be operated by changing up to six items in the preset step data.

Full numerical data instructions (Occupied number of stations: 4)

[Max. number of connectable controllers: 16 units]

Can be operated by inputting numerical data to all 12 step data items from the PLC.

■ The position and speed can be monitored by the PLC.

■ Step data can be edited from the PLC. (Except single numerical data instructions)

Function that can be executed in each mode

Mode setting	Single numerical data instructions	Half numerical data instructions	Full numerical data instructions
Number of numerical data modifiable items	1	6	12
Occupied number of stations	1	2	4
Max. number of connectable controllers	42	32	16
Step no. instructions operation		○

Specifications

Item			LECPMJ					
Compatible motor			Step motor (Servo/24 VDC)					
Power supply <small>Note 1)</small>			Power voltage: 24 VDC ±10% Maximum current consumption: 3 A (Peak 5 A) <small>Note 2)</small> [Including motor drive power, control power, lock release]					
Compatible encoder			Incremental A/B phase (800 pulse/rotation)					
Communication specifications	Fieldbus		CC-Link Ver. 1.10					
	Communication speed [bps]		156 k/625 k/2.5 M/5 M/10 M					
	Communication method		Broadcast polling					
	Station type		Remote device station					
	I/O occupation area		1 station (Input 32 points/4 words Output 32 points/4 words)		2 stations (Input 64 points/8 words Output 64 points/8 words)		4 stations (Input 128 points/16 words Output 128 points/16 words)	
	Applicable communication cable		CC-Link dedicated cable					
	Maximum cable length	Communication speed [bps]	156 k	625 k	2.5 M	5 M	10 M	
Total cable length [m]		1200	900	400	160	100		
Serial communication			RS485 (Modbus protocol)					
Memory			EEPROM					
LED indicator			PWR, ALM, L ERR, L RUN					
Lock control			Forced-lock release terminal <small>Note 3)</small>					
Cable length [m]			Actuator cable: 20 or less					
Cooling system			Natural air cooling					
Operating temperature range [°C]			0 to 40 (No freezing)					
Operating humidity range [%RH]			90 or less (No condensation)					
Storage temperature range [°C]			-10 to 60 (No freezing)					
Storage humidity range [%RH]			90 (No condensation)					
Insulation resistance [MΩ]			Between the housing and FG terminal 50 (500 VDC)					
Weight [g]			170 (Screw mounting), 190 (DIN rail mounting)					

Note 1) Do not use the power supply of "inrush current prevention type" for the controller power supply. When conformity to UL is required, the electric actuator and controller should be used with a UL1310 Class 2 power supply.

Note 2) The power consumption changes depending on the actuator model. Refer to the specifications of actuator for more details.

Note 3) Applicable to non-magnetizing lock.

Function that can be executed in each mode

Mode setting [Occupied number of stations] <small>Note 4)</small>	Single numerical data instructions [1]	Half numerical data instructions [2]	Full numerical data instructions [4]
Step no. instructions operation	○		
Numerical data instructions operation	○		
Number of numerical data modifiable items	1	6	12
Monitor function of position/speed	○		
Step data editing function	○ <small>Note 5)</small>		
Max. number of connectable controllers <small>Note 6)</small>	42	32	16

Note 4) The modes can be set by registering the occupied number of stations with basic parameter "Option setting 1" of the controller.

Note 5) It is possible to edit it from teaching box/controller setting software for "Single numerical data instructions". It is possible to edit it from teaching box/controller setting software and PLC (CC-Link) for "Half numerical data instructions" and "Full numerical data instructions".

Note 6) Maximum number of units specified in CC-Link communication specifications.

Modifiable step data item in each mode

●: Numerical data modifiable items

Mode setting	Step data item											
	Movement MOD	Speed	Position	Acceleration	Pushing speed	Pushing force	Deceleration	Trigger LV	Moving force	Area 1	Area 2	In position
Single numerical data instructions	●	←				Only one item can be changed from 11 items, ranging from Speed to In position.						→
Half numerical data instructions	●	●	●	←	→	●	←	→				
				Only one item can be changed from Acceleration/Pushing speed.		Only one item can be changed from Deceleration/Trigger LV.						
Full numerical data instructions	●	●	●	●	●	●	●	●	●	●	●	●

Note 7) Step data items, except items that have been changed, reference data registered in the controller.

Note 8) Refer to the LECPMJ operation manual for details of the step data items.
