## Connection Precautions

## A. WARNING

UNEXPECTED EQUIPMENT OPERATION
No galvanic isolation between supply terminals and control inputs.
Failure to follow these instructions can result in death, serious injury, or equipment damage.

## Performance Curves

## A.C. Load Curve 1

Electrical durability of contacts on resistive loading millions of operating cycles

X Current broken in A
Y Millions of operating cycles

## A.C. Load Curve 2

Reduction factor k for inductive loads (applies to values taken from durability curve 1).
$Y$

## X Power factor on breaking $(\cos \phi)$

Y Reduction factor k
Example: An LC1-F185 contactor supplied with $115 \mathrm{~V} / 50 \mathrm{~Hz}$ for a consumption of 55 VA or a current consumption equal to 0.1 A and $\cos \phi=0.3$. For 0.1 A , curve 1 indicates a durability of approximately 1.5 million operating cycles. As the load is inductive, it is necessary to apply a reduction coefficient $k$ to this number of cycles as indicated by curve 2 . For $\cos \phi=0.3$ : $\mathrm{k}=0.6$ The electrical durability therefore becomes:1.5 $10^{6}$ operating cycles $\times 0.6=900000$ operating cycles.

## Function Ak: Asymmetrical On-delay and Off-delay with External Control

Description
After power-up and closing of the control contact C, timing starts for a period Ta (timing can be interrupted by operating the Gate control contact G).
At the end of this timing period Ta , the output R closes.
Opening of control contact C causes a second timing period Tr to start (timing can be interrupted by operating the Gate control contact G).

At the end of this timing period Tr , the output R reverts to its initial state.
Function: 1 Output

$\mathrm{Ta}=\mathrm{t} 1+\mathrm{t} 2+\ldots$
$\operatorname{Tr}=\mathrm{t}^{\prime} 1+\mathrm{t}^{\prime} 2+.$.
