# Introducing the Type 4 Compact Light Curtain 

Mounts flush on aluminum frames!

## Realizing compact design, light weight, and advanced functionality in one package: A new concept in compact light curtains

The SF4B-C series comes in the previously unavailable size of $20(\mathrm{~W}) \times 27.4(\mathrm{D}) \mathrm{mm} 0.787(\mathrm{~W})$ $\times 1.079$ (D) in. These light curtains have been designed to be compact, lightweight, and easy to install, and they offer the extensive selection of safety features that you've come to expect from Panasonic Industrial Devices SUNX, including muting and blanking.

## Featuring a compact design, so you can maximize the machinery opening.

The SF4B-C series is designed to mount flush on an aluminum frame, allowing you to maximize the machinery opening. It can even be installed with zero dead zone.

## Width

## Plastic and metal

The SF4B-C series features a proprietary double structure that combines a plastic body that is designed to minimize weight with a metal inner frame that increases the device's toughness.

## High functionality

## Large multi-purpose indicator ${ }_{\text {ssfab canas }}$

The SF4B-C series incorporates a large multi-purpose indicator (orange) positioned at workers' eye level. The indicator signals the presence of the light curtain, helping to prevent stoppages due to inadvertent interruption of its beams. The indicator can be used in a variety of applications, including as a muting indicator or work indicator.

## Exceptional visibility from the side

The large multi-purpose indicator shines brightly through the plastic body to ensure exceptional visibility from the side.

# The SFB-HC handycontroller (optional) offers easy access to settings for a range of functionality. 

The SFB-HC handy-controller (optional) allows you to perform muting control for certain beams only. Since you can specify the beams, there is no need to install a separate guard to prevent incursions. For example, if you use muting control from the lowermost beam to the 10th beam, the light curtain will detect any interruption of the 11th or higher beam as a person and stop the machinery.

## Fixed blanking function:

 Choose active breams

The SFB-HC handy-controller provides a fixed blanking function that prevents control output (OSSD) from turning off even if certain beams are interrupted. This capability is convenient in applications where an obstruction always interrupts certain beams. Additionally, a high level of safety is provided since control output (OSSD) is forcibly turned off in the event the obstruction moves outside the detection area.

Floating blanking function: Disable unspecified beams

The floating blanking function allows you to disable up to three unspecified beams. Control output (OSSD) will not turn off as long as the number of interrupted beams is less than the set number of beams. This capability is convenient when an obstruction must move inside the detection area during setup changes or when loading materials inside the light curtain's detection area.
*The min. sensing object will change when the floating blanking function is used.

## Using output and indicators based on the unstable light reception monitor to enable preventive maintenance

By setting the auxiliary output change function to off or on when light reception becomes unstable, you can have the light curtain provide notification in the event of a reduction in the amount of light being received due to beam misalignment or dirt via auxiliary output (non-safety output) in addition to the light reception indicator.

|  |  | Auxiliary output |  |
| :--- | :--- | :---: | :---: |
|  |  | Incident light intensity indicator |  | $\begin{array}{c}\text { Set to off for } \\ \text { unstable incident } \\ \text { beam (Note 3) }\end{array}$ | \(\left.\begin{array}{c}Set to on for <br>

unstable incident <br>
beam (Note 3)\end{array}\right]\)

Notes:1) An incident light intensity value of $100 \%$ is used as the threshold at which control output (OSSD1, OSSD2) changes from off to on
2) Interruption of the light refers to the presence of a light-blocking obstruction in the detection area
3) This setting is not available when using muting control for individual beams, fixed blanking, or floating blanking.

## High functionality

## Extensive array of other functions

- PNP / NPN polarity support

Since a single model number can be switched between PNP and NPN input, fewer model numbers need to be registered.

- External device monitor function

External devices (such as safety relays, etc.) can be directly connected to the handy-controller without any dedicated unit, simplifying installation, reducing costs, and helping avoid various issues and problems.

■ Extraneous light check \& avoid (ELCA) function The ELCA function reduces interference without the need for an interference prevention line.

## ■ Beam alignment indicator

A beam alignment indicator divides the light curtain's beams into four equal displays, allowing you to see at a glance where light is being received

In case of setting the interlock function to "disabled (automatic reset)"

In case of setting the external device monitoring function to "disabled"

## SF-C13

## SF4B-■C wiring diagram (Control Category 4)

## For PNP output (minus ground)

- Connect the light curtain control outputs OSSD 1 and OSSD 2 to S 1 and S2 respectively

Notes: 1) The above diagram is when using manual reset. If automatic reset is used, disconnect the lead from X2 and connect it to X3. In this case, a reset (RESET) button is not needed.
2) Use a momentary-type switch as the reset (RESET) button.

## Terminal arrangement diagram

| $120$ | A1 | Terminal | Description |
| :---: | :---: | :---: | :---: |
| 5 | A2 | A1 | +24 V DC |
| (0) | S1 |  |  |
| 20 | S2 | A2 | 0 V |
| 12 | S3 |  | Light curtain control output |
| 50 | S4 | S1 to S4 | (OSSD) input terminal |
| 50 | X1 | AUX | Semiconductor auxiliary output |
| 10 | X3 | X1 | Reset output terminal |
| 5 | 13 <br> 14 | X2 | Reset input terminal (Manual) |
| (0) | 23 | X3 | Reset input terminal (Automatic) |
| LO | 24 |  |  |
| 12 | 33 | 13-14, 23-24, 33-34 | Enabling path (NO contact $\times 3$ ) |
| 20 | 34 <br> 41 | 41-42 | Auxiliary output (NC contact $\times 1$ ) |
| 20 | 42 |  |  |

When wiring connections to the light curtain, you are responsible for providing a terminal block.

## For NPN output (plus ground)

- Connect the light curtain control outputs OSSD 1 and OSSD 2 to S4 and S2 respectively and ground the + side.

Notes: 1) The above diagram is when using manual reset. If automatic reset is used, disconnect the lead from X2 and connect it to X3. In this case, a reset (RESET) button is not needed.
2) Use a momentary-type switch as the reset (RESET) button.

## Wiring

?Refer to the applicable regulations for the region where this device is to be used when setting up the device. In addition, make sure that all necessary measures are taken to prevent possible dangerous operating errors resulting from earth faults.

- Make sure to carry out the wiring in the power supply off condition.
- Verify that the supply voltage variation is within the rating.
- If power is supplied from a commercial switching regulator, ensure that the frame ground (F.G.) terminal of the power supply is connected to an actual ground.
- In case noise generating equipment (switching regulator, inverter motor, etc.) is used in the vicinity of this sensor, connect the frame ground (F.G.) terminal of the equipment to an actual ground.
- Do not run the wires together with high-voltage lines or power lines or put them in the same raceway. This can cause malfunction due to induction.

## Interlock function

- The selection of manual reset / automatic reset is available by applying the interlock input (pale purple) wiring. The interlock becomes available by selecting manual reset.

| Interlock setting input wire <br> (pale purple) | Interlock <br> function |
| :---: | :---: |
| When selecting PNP output: Connected to +V |  |
| When selecting NPN output: Connected to 0 V |  | Manual reset $\quad$ Open $\quad$ Automatic reset.

今
In case of using the interlock function, be sure there exists no operator inside of the dangerous area. It causes death or serious injury without the confirmation.

## Manual reset

- The control outputs (OSSD 1, OSSD 2) are not turned ON automatically even though this device is received the light. When this device is reset in light received state [open the emission halt input / reset input $\rightarrow$ short-circuit the device to 0 V or $+\mathrm{V} \rightarrow$ open], the control outputs (OSSD 1, OSSD 2) are turned ON.

The reset switch shall be placed in area where all over the dangerous zone shall be comprehend and out side of the dangerous zone.

## Automatic reset

- The control output (OSSD 1, OSSD 2) is turned ON automatically when this device receives the light.

In case that this light curtain is used under automatic reset mode, set the system not to be auto reset by the safety relay unit, etc. (conforming to EN 60204-1)

- It is possible to change the conditions for interlocking by using the handy-controller SFB-HC (optional). Refer to instruction manual enclosed with this product for details

## Emission halt function

- This function stops the emission process of the emitter. You can select whether emission is on or halted by means of the connection status for the emission halt input / reset input wire (pink).

| Interlock function | Emission halt input / Reset input wire (pink) | Emission halt | Control output status (OSSD 1, OSSD 2) |
| :---: | :---: | :---: | :---: |
| Manual reset | Open | Invalid | ON |
|  | When selecting PNP output: <br> Connected to +V <br> When selecting NPN output: <br> Connected to 0 V | Valid | OFF |
| Automatic reset | Open | Valid | OFF |
|  | When selecting PNP output: Connected to +V <br> When selecting NPN output: <br> Connected to 0 V | Invalid | ON |

- During emission halt, the control outputs (OSSD 1, OSSD 2) become OFF status.
- By using this function, malfunction due to extraneous noise or abnormality in the control outputs (OSSD 1, OSSD 2) and the auxiliary output can be determined even from the machinery side.
- Normal operation is restored when the emission halt input / reset input wire (pink) is connected to 0 V or +V (for manual reset: open).

Do not use the emission halt function for the purpose of stopping the machine in which the SF4B-C series is installed. Failure to do so could result in death or serious injury.

## External device monitoring function

- This is the function for checking whether the external safety relay connected to the control outputs (OSSD 1, OSSD 2) perform normally in accordance with the control outputs (OSSD 1, OSSD 2) or not. Monitor the contacting point "b" of the external safety relay, and if any abnormality such as deposit of the contacting point, etc. is detected, change the status of the light curtain into lockout one, and turn OFF the control outputs (OSSD 1, OSSD 2).

## In case of setting the external device monitoring function to enabled

- Connect the external device monitoring input (yellowgreen) to the external safety relay connected the control outputs (OSSD 1, OSSD 2).

## In case of not using the external device monitoring function

- Connect the external device monitoring input (yellowgreen) to the auxiliary output (yellow-green / black). At this time, set the auxiliary output as [negative logic of control outputs (OSSD 1, OSSD 2)] (factory setting).
- The auxiliary output cannot be connected to external devices.

- It is also possible to set the external device monitoring function into invalid by using the handy-controller SFB-HC (optional). Refer to instruction manual enclosed with this product for details.

## Auxiliary output (Non-safety output)

- This light curtain incorporates the auxiliary output (yellowgreen / black) for the non-safety output. The auxiliary output is incorporated with the emitter.

| Auxiliary output <br> setting | Normal mode |  |  |  |
| :--- | :---: | :---: | :---: | :---: |
|  | Emission <br> halt | Control outputs <br> (OSSD 1, OSSD 2) status | Lockout |  |
|  | Beam received | Beam inerrupted |  |  |

$\triangle$
Do not use the auxiliary output for the purpose of stopping the device with SF4B-C installed. Failure to do so could result in serious injury or death.

## Muting Function (For SF4B-■CA-J05 only)

- Incorrect use of the muting control may cause accidents. Please understand the muting control fully, and use it. As for the muting control, the following international standards define the requirements.
ISO 13849-1 (EN ISO 13849-1 / JIS B 9705-1) IEC 61496-1 (ANSI / UL 61496 / JIS B 9704-1) IEC 60204-1 (JIS B 9960-1)
EN 415-4
ANSI B11.19-1990
ANSI/RIA R15.06-1999
- Use the muting control while the machine cycle is not in danger mode. Maintain safety with the other measure while the muting control is activated.
- For the application that the muting control is activated when a workpiece passes through the sensor, place the muting sensor so that the conditions for the muting control cannot be satisfied by intrusion of personnel when the workpiece is passing through the sensor or the workpiece is not passing through it.
- Be sure to check the operation of the muting function before its use.
- This function turns the safety function of this light curtain into disabled temporarily. When the control outputs (OSSD 1, OSSD 2) are ON, this function is available for passing the workpiece through the sensing area of the light curtain without stopping the machinery.
The muting function becomes valid when all the conditions listed below are satisfied.
(1) The control outputs (OSSD 1, OSSD 2) shall be ON.
(2) The output of the muting sensors $A$ and $B$ shall be changed from OFF (open) to ON. At this time, the time difference occurred by changing the output of the muting sensors A and $B$ into $O N$ status shall be within 0.03 to 3 sec.
- The following devices, photoelectric sensor with semiconductor output, inductive proximity sensor, position switch on N.O. (Normally open) contact, etc. are available for applying to the muting sensor.

Notes: 1) 0 to 3 sec . is allowable by using the handy controller Ver. 2.1 (SFB-HC) (optional) and connecting NO (Normally Open) type muting sensor to the input A, as well as connecting NC (Normally Closed) type muting sensor to the input B.
2) The muting indicator diagnosis function can be set with the handy controller Ver. 2 or later (SFB-HC) (optional), but it must be set to invalid. If the muting indicator diagnosis function is set to valid, the muting function cannot be used.

## <Muting auxiliary output wiring>

- To trigger a large multi-purpose indicator during muting operation, connect the wiring as follows: As for lead wires other than below, perform wiring depending on your application.

## Override function (For SF4B-■CA-J05 only)

- This function sets the safety function of this light curtain enabled forcibly. When using the muting function, the override function can be used to start the machinery at times such as when the control outputs (OSSD 1 and OSSD 2) are OFF or when the muting sensors are ON when the line is to be started. The override function becomes valid when all the conditions listed below are satisfied.
(1) The signal shall be input to either muting sensor $A, B$, or $A$ and $B$.
(2) The override input (yellow) shall be short-circuited to 0 V or +V , and the emission halt input / reset input (pink) shall be opened. ( 3 sec . continuously)
If one of the two conditions above becomes invalid or timing exceeds 60 sec . (Note 1), the override function becomes invalid.
- The override function only operates when the interlock function is disabled (automatic reset).
Notes: 1) By using handy-controller (SFB-HC) (optional) Ver.2.1 or later, a change between 60 and 600 sec . by 10 sec . per unit is possible.

2) The muting indicator diagnosis function can be set with the handy controller Ver. 2 or later (SFB-HC) (optional), but it must be set to invalid. If the muting indicator diagnosis function is set to valid, the muting function cannot be used.
3) The override function only operates when the interlock function is disabled (automatic reset).

- Make sure manually to operate system for starting override function. Furthermore, the system shall be placed in area where all over the dangerous zone shall be comprehend and out side of the dangerous zone.
- Using override function, make sure that there exist no operator in the dangerous zone, which may result in death or serious injury.

## Others

- Do not use during the initial transient time (2 sec.) after the power supply is switched on.
- Avoid dust, dirt and steam.
- Take care that the light curtain does not come in direct contact with water, oil, grease, or organic solvents, such as, thinner, etc.
- Take care that the light curtain is not directly exposed to fluorescent light from a rapid-starter lamp or a high frequency lighting device, as it may affect the sensing performance.
- When this device is used in the "PSDI mode", an
appropriate control circuit must be configured
between this device and the machinery. For
details, be sure to refer to the standards or
regulations applicable in each region or country.
To use this product in the U.S.A., refer to OSHA 1910.
212 and OSHA 1910. 217 for installation, and in
Europe, refer to EN 999 as well. Observe your national
and local requirements before installing this product.
- This catalog is a guide to select a suitable product. Be sure to read instruction manual attached to the product prior to its use.
- Both emitter and receiver are combined adjusted on factory setting, please apply both emitter and receiver with the same serial No. The serial No. is indicated on the plates of both emitter and receiver. (Indicated under model No.)
- Make sure to carry out the test run before regular operation.
- Do not use this product with machinery that cannot be stopped immediately during the operating cycle by means of an emergency stop system.

## Sensing area

| - Make sure to install this product such that any |
| :--- |
| part of the human body must pass through its |
| sensing area in order to reach the dangerous |
| parts of the machinery. Furthermore, ensure that |
| some part of the operator's body always remains |
| in the sensing area when operation is done with |
| the dangerous parts of the machine. If the human |
| body is not detected, there is a danger of serious |
| injury or death. |
| - Do not use any reflection type or recursive |
| reflection type arrangement. |
| - Multiple receivers (emitters) cannot be connected |
| to one emitter (receiver). |

## Example of correct installation

## Example of Incorrect Installation

## Influence of reflective surfaces

Install the light curtain by considering the effect of nearby reflective surfaces, and take countermeasures such as painting, masking, or changing the material of the reflective surface, etc. Failure to do so may cause the light curtain not to detect, resulting in serious body injury or death.

- Install this device at a distance of at least A (m) (given below) away from reflective surfaces such as metal walls, floors, ceilings, workpiece, covers, panels or glass surfaces.

## Side view

Top view

| Distance between emitter and receiver (Setting distance L ) | Allowable installation distance A |
| :---: | :---: |
| 0.3 to 3 m 0.984 to 9.843 ft | 0.16 m 0.525 ft |
| $\begin{aligned} & 3 \text { to } 7 \mathrm{~m} \\ & 9.843 \text { to } 22.966 \mathrm{ft} \end{aligned}$ | $\begin{aligned} & L / 2 \times \tan 2 \theta= \\ & L / 2 \times 0.105(\mathrm{~m}) \\ & 0.004(\mathrm{in})\left(\theta=3^{\circ}\right) \end{aligned}$ |

Note: The effective aperture angle for this device is $\pm 2.5^{\circ}$ or less (when L > 3m 9.843 ft ) as required by IEC 61496-2, ANSI/UL 61496-2. However, install this device away from reflective surfaces considering an effective aperture angle of $\pm 3^{\circ}$ to take care of beam misalignment, etc. during installation.

## Handy-controller

This device enables to set each function using the handy-controller SFB-HC (optional). Among the functions, the contents related to the safety distance such as the size of the minimum sensing object and response time are varied depending on the setting condition. When setting each function, re-calculate the safety distance, and make enough space larger than the calculated safety distance. Failure to do so might cause the accident that the device cannot stop quickly before reaching the dangerous area of the machinery, resulting in the serious injury or death.

- Refer to the instruction manual enclosed with the handycontroller for details of the function settings for using handy-controller SFB-HC (optional).

## Safety distance

- Calculate the safety distance correctly, and
always maintain a distance which is equal to
or greater than the safety distance, between
the sensing area of this light curtain and the
dangerous parts of the machinery. (Please
check the latest standards for the equation.)
If the safety distance is miscalculated or if
sufficient distance is not maintained, there is
a danger of serious injury or death.
- Before designing the system, refer to the
relevant standards of the region where this
device is to be used and then install this
device.

The sizes of the minimum sensing objects for this device vary depending on whether or not the floating blanking function is being used. Calculate the safety distance with the proper size of the minimum sensing object and appropriate equation.
Size of minimum sensing object when applying floating blanking function

|  | Invalid | Setting (Note) |  |  |
| :---: | :---: | :---: | :---: | :---: |
|  |  | 1 beam channel | 2 beam channels | 3 beam channels |
| SF4B-H■C (A-J05) (Min. sensing object ø25 mm ø0.984 in) | $\begin{aligned} & \varnothing 25 \mathrm{~mm} \\ & \varnothing 0.984 \mathrm{in} \end{aligned}$ | $\begin{gathered} \varnothing 45 \mathrm{~mm} \\ \varnothing 1.772 \mathrm{in} \end{gathered}$ | $\begin{aligned} & ø 65 \mathrm{~mm} \\ & \emptyset 2.559 \mathrm{in} \end{aligned}$ | $\begin{gathered} ø 85 \mathrm{~mm} \\ \varnothing 3.346 \mathrm{in} \end{gathered}$ |
| SF4B-H■C (A-J05) (Min. sensing object $\varnothing 45 \mathrm{~mm} \varnothing 1.772$ in) | $\begin{gathered} \varnothing 45 \mathrm{~mm} \\ \varnothing 1.772 \mathrm{in} \end{gathered}$ | $\begin{array}{\|c} ø 85 \mathrm{~mm} \\ ø 3.346 \mathrm{in} \end{array}$ | $\begin{aligned} & \varnothing 125 \mathrm{~mm} \\ & \varnothing 4.921 \mathrm{in} \end{aligned}$ | $\begin{aligned} & \varnothing 165 \mathrm{~mm} \\ & \varnothing 6.496 \mathrm{in} \end{aligned}$ |

Note: Refer to P. 5 for details of the floating blanking function.

- Safety distance is calculated based on the following equation when a person moves perpendicular (normal intrusion) to the sensing area of the light curtain. In case the intrusion direction is not perpendicular to the sensing area, be sure to refer to the relevant standard (regional standard, specification of the machine, etc.) for details of the calculation.

## For use in Europe (EU) (as EN 999) (Also applicable to ISO 13855 / JIS B 9715)

For intrusion direction perpendicular to the sensing area <ln the case that the minimum sensing object is $\varnothing 40 \mathrm{~mm}$ ø1.575 in or less>

- Equation (1) $\quad S=K \times T+C$

S: Safety distance ( mm )
Minimum required distance between the sensing area surface and the dangerous parts of the machine
K: Intrusion velocity of operator's body or object ( $\mathrm{mm} / \mathrm{sec}$.) Taken as $2,000(\mathrm{~mm} / \mathrm{sec}$.) for calculation
T: Response time of total equipment (sec.) $\mathrm{T}=\mathrm{T}_{\mathrm{m}}+\mathrm{T}_{\mathrm{SF} 4 \mathrm{~B}}$
$\mathrm{T}_{\mathrm{m}}$ : Maximum halting time of machinery (sec.)
$\mathrm{T}_{\mathrm{SF} \square \mathrm{C}}$ : Response time of the SF4B-C series (sec.)
C: Additional distance calculated from the size of the minimum sensing object of the SF4B-C series (mm) However, the value of C cannot be under 0 . $C=8 \times(d-14)$
d: Minimum sensing object diameter (mm)

- For calculating the safety distance " S ", there are the following five cases.
First calculate by substituting the value $K=2,000$ ( $\mathrm{mm} / \mathrm{sec}$.) in the equation above. Then, classify the obtained value of " $S$ " into three cases, 1) $S<100,2$ ) $100 \leq S \leq 500$, and 3 ) $S>500$. For Case

3) $S>500$, recalculate by substituting the value $K=$ $1,600(\mathrm{~mm} / \mathrm{sec}$.). After that, classify the calculation result into two cases,
4) $S \leq 500$ and 5) $S>500$. For details, refer to the instruction manual enclosed with this product.

- When this device is used in the "PSDI mode", an appropriate safety distance "S" must be calculated. For details, be sure to refer to the standards or regulations applicable in each region or country.
$<$ In the case that the minimum sensing object is $\varnothing 40 \mathrm{~mm} \varnothing 1.575$ in or more>
- Equation (1) $\quad S=K \times T+C$

S: Safety distance ( mm )
K: Intrusion velocity of operator's body or object ( $\mathrm{mm} / \mathrm{sec}$.) Taken as $1,600(\mathrm{~mm} / \mathrm{sec}$.) for calculation
T : Response time of total equipment (sec.) $\mathrm{T}=\mathrm{T}_{\mathrm{m}}+\mathrm{T}_{\mathrm{SF} 4 \mathrm{~B}}$
$\mathrm{T}_{\mathrm{m}}$ : Maximum halting time of machinery (sec.)
$\mathrm{T}_{\mathrm{SF} \square \mathrm{C}}$ : Response time of the SF4B-C series (sec.)
C: Additional distance calculated from the size of the minimum sensing object of the SF4B-C series (mm) $C=850(\mathrm{~mm})$ (Constant)

## For use in the United States of America (as per ANSI/RIA 15.06)

- Equation (2) $\quad S=K \times\left(T_{s}+T_{C}+T_{S F 4 B}+T_{b m}\right)+D_{p f}$ S : Safety distance (mm) Minimum required distance between the sensing area surface and the dangerous parts of the machine
K : Intrusion velocity \{Recommended value in OSHA is 63 (inch/s) [ 1,600 ( $\mathrm{mm} / \mathrm{sec}$.)] \}
ANSI/RIA 15.06 does not define the intrusion speed "K". When determining K, consider possible factors including physical ability of operators.
Ts: Halting time calculated from the operation time of the control element (air valve, etc.) (sec.)
$\mathrm{T}_{\mathrm{C}}$ :Maximum response time of the control circuit required for functioning the brake (sec.)
TSF4B: Response time of the SF4B-C series (sec.)
Tbm : Additional halting time tolerance for the brake monitor (sec.)
The following equation holds when the machine is equipped with a brake monitor.
$T_{b m}=T_{a}-\left(T_{s}+T c\right)$
$T_{\mathrm{a}}$ : Setting time of brake monitor (sec.)
When the machine is not equipped with a brake monitor, it is recommended that $20 \%$ or more of (Ts $\left.+\mathrm{T}_{\mathrm{c}}\right)$ is taken as additional halting time.
$\mathrm{D}_{\mathrm{pf}}$ : Additional distance calculated from the size of the minimum sensing object of the device ( mm )
SF4B-H ${ }_{\square}$ C (A-J05): $\mathrm{D}_{\mathrm{pf}}=61.2 \mathrm{~mm} 2.409 \mathrm{in}$
SF4B-A■C (A-J05): $D_{p f}=129.2 \mathrm{~mm} 5.087$ in
$\mathrm{D}_{\mathrm{pf}}=3.4 \times(\mathrm{d}-0.276)$ (inch)
$\approx 3.4 \times(\mathrm{d}-7)(\mathrm{mm})$
d: Minimum sensing object diameter 0.985 (inch) $\approx 25(\mathrm{~mm})$
[SF4B-H C C (A-J05)]
Minimum sensing object diameter 1.772 (inch) $\approx 45$ (mm)
[SF4B-A $\square$ C (A-J05)]

[^2]

## MS-SF4BC-1

${ }^{9.3}$

Four bracket set (two each R and L type)

Material: Stainless stee

Material: Stainless stee
Four bracket set (two each $R$ and $L$ type)
Eight M3 (length: 5 mm 0.197 in ) hexagon-socket-
head bolts and four 5M flat washers are attached.

MS-SF4BC-3

Material: Stainless steel
Four bracket set (two each $R$ and $L$ type)
[ Eight M3 (length: 5 mm 0.197 in ) hexagon-socket-
head bolts and four 5M flat washers are attached.

## MS-SF4BC-4

## <For rear mounting>

## <For side mounting>

Material: Stainless steel
2 Two pcs. M5 flat washers, two pcs. assembled M3 (length: 6 mm 0.236 in ) hexagon-socket-head bolts for rear mounting, two pcs. attachments for side mounting Note: The numbers of sets required by SF4B-H $\square \mathbf{C}$ (A-J05) (40 or more beam axes) and SF4B-A $\square \mathbf{C}$ (A-J05) (20 or more beam axes) are as follows: SF4B-H40C (A-J05), SF4B-H48C (A-J05), SF4B-H56C (A-J05), SF4B-A20C (A-J05), SF4B-A24C (A-J05), SF4B-A28C (A-J05): 1set SF4B-H64C (A-J05), SF4B-H72C (A-J05), SF4B-H80C (A-J05), SF4B-A32C (A-J05), SF4B-A36C (A-J05), SF4B-A40C (A-J05): 2 sets

## MS-SF4BC-5

## <For rear mounting>

$2 \times$ M3 mounting hole for countersunk screw

## <For side mounting>

Material: Stainless steel
2 Two pcs. for rear mounting, two pcs. for side mounting
Note: The numbers of sets required by SF4B-H $\square \mathbf{C}$ (A-J05) (40 or more beam axes) andSF4B-A $\square \mathbf{C}(\mathbf{A}-\mathbf{J 0 5})$ (20 or more beam axes) are as follows: SF4B-H40C (A-J05), SF4B-H48C (A-J05), SF4B-H56C (A-J05), SF4B-A20C (A-J05), SF4B-A24C (A-J05), SF4B-A28C (A-J05): 1 set SF4B-H64C (A-J05), SF4B-H72C (A-J05), SF4B-H80C (A-J05), SF4B-A32C (A-J05), SF4B-A36C (A-J05), SF4B-A40C (A-J05): 2 sets

SFB-CC $\square-M U$
Mating cable with connector on one end (optional)

[^0]:    Note: Where measurement conditions have not been specified precisely, the conditions used were an ambient temperature of $+20^{\circ} \mathrm{C}+68{ }^{\circ} \mathrm{F}$.

[^1]:    Note: Vs is the applying supply voltage.

[^2]:    - When the floating blanking function is applied, the minimum sensing object becomes large. According to ANSI/RIA 15.06,
    Dpf $=900 \mathrm{~mm}(3 \mathrm{ft})$ when $\mathrm{d}>64 \mathrm{~mm}$ ( 2.5 inches).
