

Open your eyes to *LEXA*

Virtually Invisible

Take a good look at the lens of LEXA eyewear. Not much to see is there? That's the beauty of it. Its refined, sleek design is totally unobtrusive and virtually invisible to the wearer. There is no need for a bulky browguard because the wrap of the lens provides the same brow coverage. No distracting sideshields to reduce peripheral vision and there are no parting lines. Nothing to block or distort a person's vision, instead the engineered optics of LEXA eyewear complements sight by extending the viewing range, up and down, side to side and all around.

Contoured Coverage

With LEXA you'll feel like every pair has been custom moulded. The optical specialists at AOSafety designed LEXA eyewear to not only span across the face, but to curve around it. The shape follows and blends with the facial outline, to provide optimum full coverage.

DX™ Anti-Mist Lens Coating

Resists misting, scratching, static and chemical attack. No polycarbonate lens coating has ever out performed AOSafety's superior DX coating.

It's a whole ne

eyewear from AOSafety

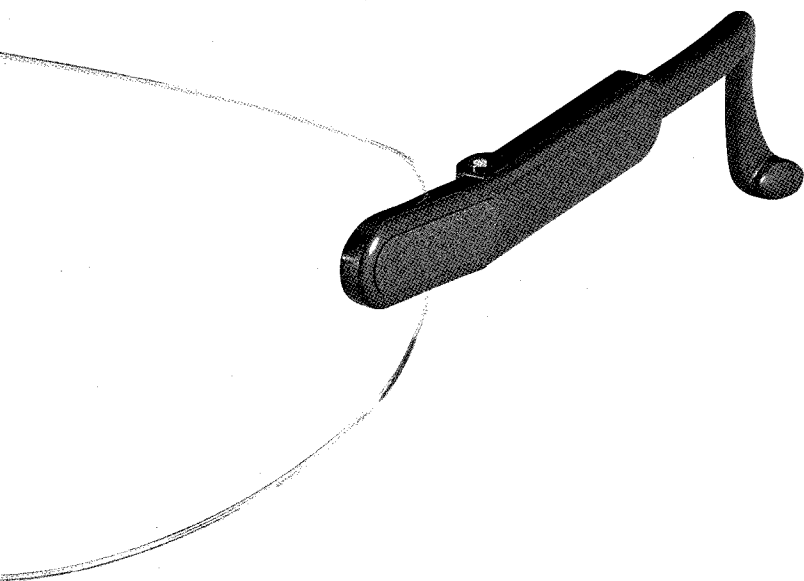

Adjustability & Two Sizes

People don't have to adapt to LEXA eyewear, it adapts to them. The days of a person having to accept the fit limitations of a pair of safety spectacles are over. Wearers can fine-tune LEXA to their own preferences, choosing from three different lens angles and four temple lengths. Workers' faces are different sizes, so are LEXA safety spectacles. Available with a medium or large lens to meet the needs of most workers, you can now confidently fit your employees with the size that provides the best combination of comfort, coverage and fit.

Extended View

At work, a lot of things can get in the way. Safety spectacles shouldn't be one of them. Experience the extended view of LEXA eyewear and work will never look the same again.

Metallic Frame Colours

Without a doubt, LEXA eyewear is a whole new kind of safety spectacle. Available in a new selection of metallic colours, Slate, Blue and Purple.

new way to see !
