

Features

Multi-function timer range

83.01 - Multi-function & multi-voltage, 1 Pole

83.02 - Multi-function & multi-voltage, 2 Pole (timed + instantaneous options), external time setting potentiometer option

- 22.5 mm wide
- Eight time scales from 0.05s to 10 days
- High input/output isolation
- Wide supply range (24...240)V AC/DC
- 35 mm rail (EN 60715) mount
- "Blade + cross" - both flat blade and cross head screw drivers can be used to adjust the range and function selectors, the timing trimmer, and to disengage the rail mounting clip
- Multi-voltage versions with "PWM clever" technology

83.01

- Multi-voltage
- Multi-function

83.02

- Multi-voltage
- Multi-function
- Timing can be regulated using ext. Potentiometer
- 2 timed contacts or 1 timed + 1 instantaneous contact

Ordering information

Example: 83 series, modular timers, 1 CO (SPDT) - 16 A, supply rated at (24...240)V AC/DC.

- Series**
- Type**
- 0 = Multi-function (AI, DI, GI, SW, BE, CE, DE, WD)
 - 1 = On-delay (AI)
 - 2 = Interval (DI)
 - 4 = Off-delay with control signal (BE)
 - 6 = Power off-delay (True off-delay) (BI)
 - 8 = Star-delta (SD)
 - 9 = Asymmetrical flasher (LI, LE, PI, PE)

- Versions**
- 0000 = Standard
- Supply voltage**
- 240 = (24 ... 240)V AC/DC
- Supply version**
- 0 = AC (50/60 Hz)/DC
- No. of poles**
- 1 = 1 CO (SPDT)
 - 2 = 2 CO (DPDT) for 83.02 and 83.62
 - 2 = 2 NO (DPST-NO) for 83.82

Radiated and conducted emission		EN 55022	class A	class A	
Other data					
Current absorption on control signal (B1)			< 1 mA		
- max cable length (capacity of ≤ 10 nF / 100 m)			150 m		
- when applying a control signal to B1, which is different from the supply voltage at A1/A2			B1 is isolated from A1 and A2 by an opto-coupler, and can therefore be operated at a voltage other than the supply voltage. If using a control signal of between (24... 48)V DC and a supply voltage of (24...240)V AC, ensure that the signal – is connected to A2 and the + is applied to B1, and that L is applied to B1 and N to A2.		
External potentiometer for 83.02			Use a 10 kΩ/ ≥ 0,25 W linear potentiometer. Maximum cable length 10 m. When using an external potentiometer, the timer automatically use its setting in place of the internal setting. Consider the voltage potential at the potentiometer to be the same as the timer supply voltage.		
Power lost to the environment	without contact current	W	1.4		
	with rated current	W	3.2		
Screw torque		Nm	0.8		
Max. wire size			solid cable	stranded cable	
		mm ²	1x6 / 2x4	1x4 / 2x2.5	
		AWG	1x10 / 2x12	1x12 / 2x14

Functions

LED*	Supply voltage	NO output contact	Contacts	
			Open	Closed
	OFF	Open	15 - 18 25 - 28	15 - 16 25 - 26
	ON	Open	15 - 18 25 - 28	15 - 16 25 - 26
	ON	Open (Timing in Progress)	15 - 18 25 - 28	15 - 16 25 - 26
	ON	Closed	15 - 16 25 - 26	15 - 18 25 - 28

* The LED on type 83.62 is illuminated when supply voltage is supplied to timer.

• Possible to control an external load, such as another relay coil or timer, connected to the control signal terminal B1.

* With DC supply, positive polarity has to be connected to B1 terminal (according to EN 60204-1).

** A voltage other than the supply voltage can be applied to the control signal (B1), example:
A1 - A2 = 230 V AC
B1 - A2 = 12 V DC

Functions

Wiring diagram

Type 83.01
83.02

U = Supply voltage S = Signal switch = Output contact

(AI) On-delay.
Apply power to timer. Output contacts transfer after preset time has elapsed. Reset occurs when power is removed.

(DI) Interval.
Apply power to timer. Output contacts transfer immediately. After the preset time has elapsed, contacts reset.

(GI) Pulse delayed.
Apply power to timer. Output contacts transfer after preset time has elapsed. Reset occurs after a fixed time of 0.5s.

(SW) Symmetrical flasher (starting pulse on).
Apply power to timer. Output contacts transfer immediately and cycle between ON and OFF for as long as power is applied. The ratio is 1:1 (time on = time off).

(BE) Off-delay with control signal.
Power is permanently applied to the timer. The output contacts transfer immediately on closure of the control signal (S). Opening the control signal initiates the preset delay, after which time the output contacts reset.

(CE) On- and off-delay with control signal.
Power is permanently applied to the timer. Closing the control signal (S) initiates the preset delay, after which time the output contacts transfer. Opening the control signal initiates the same preset delay, after which time the output contacts reset.

(DE) Interval with control signal on.
Power is permanently applied to the timer. On momentary or maintained closure of control signal (S), the output contacts transfer, and remain so for the duration of the preset delay, after which they reset.

(WD) Watchdog (Retriggerable interval with control signal on).
Power is permanently applied to the timer. On momentary or maintained closure of control signal (S), the output contacts transfer, and remain so for the duration of the preset delay, after which they reset; subsequent closures of control signal during the delay will extend the time. If the closure of the control signal (S) is longer than the preset time (T) then the output contacts reset.

NOTE: The timing function must be set when the timer is de-energised. Or for the 83.02, when the contact mode selector is in the OFF position.

83.02 type

Contact mode selector	Functions without control signal (example: AI)	Functions with control signal (example: BE)
2 timed contacts 	<p>Both output contacts (15-18 and 25-28) follow the timing function</p>	<p>Both output contacts (15-18 and 25-28) follow the timing function</p>
OFF 	<p>Both output contacts [15-18 and 25(21)-28(24)] stay permanently open</p>	<p>Both output contacts [15-18 and 25(21)-28(24)] stay permanently open</p>
1 timed + 1 instantaneous contact 	<p>The output contact 15-18 follows the timing function The output contact 21-24 follows the power supply (U)</p>	<p>The output contact 15-18 follows the timing function The output contact 21-24 follows the control signal (S)</p>

Functions

Wiring diagram

U = Supply voltage

S = Signal switch

= Output contact

Mono-function

without control signal

Type 83.11

(AI) On-delay.

Apply power to timer. Output contacts transfer after preset time has elapsed. Reset occurs when power is removed.

83.21

(DI) Interval.

Apply power to timer. Output contacts transfer immediately. After the preset time has elapsed, contacts reset.

83.62

(BI) Power off-delay (True off-delay).

Apply power to timer (minimum 500 ms). Output contacts transfer immediately. Removal of power initiates the preset delay, after which time the output contacts reset.

83.82

(SD) Star-delta.

Apply power to timer. The star contact (Λ) closes immediately. After preset delay has elapsed the star contact (Λ) resets. After a further time (settable from 0.05s to 1s) the delta contact (Δ) closes and remains in that position, until reset on power off.

with control signal (S)

83.41

(BE) Off-delay with control signal.

Power is permanently applied to the timer. The output contacts transfer immediately on closure of the control signal (S). Opening the control signal initiates the preset delay, after which time the output contacts reset.

Asymmetrical recycler

without control signal

83.91

(LI) Asymmetrical flasher (starting pulse on)- (Z1-Z2 open).

Apply power to timer. Output contacts transfer immediately and cycle between ON and OFF for as long as power is applied. The ON and OFF times are independently adjustable.

(PI) Asymmetrical flasher (starting pulse off) - (Z1-Z2 linked).

Apply power to timer. Output contacts transfer after time T1 has elapsed and cycle between OFF and ON for as long as power is applied. The ON and OFF times are independently adjustable.

Z1-Z2 open: **(LI)** function
Z1-Z2 linked: **(PI)** function

with control signal

83.91

(LE) Asymmetrical flasher (starting pulse on) with control signal - (Z1-Z2 open).

Power is permanently applied to the timer. Closing control signal (S) causes the output contacts to transfer immediately and cycle between ON and OFF, until opened.

(PE) Asymmetrical flasher (starting pulse off) with control signal - (Z1-Z2 linked).

Power is permanently applied to the timer. Closing the control signal (S) initiates delay T1 after which the output contacts transfer and continue to cycle between OFF and ON, until the control signal is opened.
