RS M500 Micropump Controller 12v

E

RS, Professionally Approved Products, gives you professional quality parts across all products categories. Our range has been testified by engineers as giving comparable quality to that of the leading brands without paying a premium price.

RS M500 Micropump Controller

The EQ series of brush less motor controllers are a small light weight range of driver boards that can be installed in line with any RS Brushless Micropump that requires an external motor driver to able power and control via a standard DC power supply.

Standard controllers are available in both 12V and 24V versions and are pump specific. Each variant uses the same hardware but is specifically programmed to suit the requirements of that specific pump. On all EQ controller variants the overall pump performance can be controlled by adjusting the input supply voltage

Typical Applications

The EQ12-EQ24 are perfect for permanent installations

Standard features:

- Input Voltage 12 V
- 3 wire, colour coded output connections
- Small size only 58 x 29 x 15 mm
- Weight 33g
