SERIES IEF | INSERTION ELECTROMAGNETIC FLOW TRANSMITTER

FEATURES/BENEFITS

- **Field configurable, integral or remote displays allow for ultimate flexibility by accommodating a variety of applications through multiple display configurations**
- **High performance accuracy is maintained through changes in temperature, density, and viscosity**
- **Setup Wizard and installation tool are simple to use allowing for quick and precise installation**
- **Accessory setup kit A-IEF-KIT ensures exact installation application depth with included thickness gage and measuring tape**
- **Long life cycle and minimal maintenance requirements with no moving parts to wear or break and electrodes that discourage fouling**
- **Isolation valve accessory options allow for installation in operational systems via hot-tap kit or easy removal without system downtime**
- **NIST calibration certificate included standard for Carbon Steel Schedule 40 pipes sized 4˝ (102 mm), 6˝ (150 mm), 8˝ (200 mm), and 10˝ (250 mm) with high accuracy option**

Shown with A-IEF-VLV-BR accessory valve

APPLICATIONS

- Boiler feed water
- Chilled water
- Open and closed loop condenser water
- Irrigation system
- Municipal water distribution
- Process and coolant flow
- Ground water remediation
- Chemical processing
- Pump protection
- Wastewater
- Mining

**-LCD option shown**

DESCRIPTION

The **SERIES IEF** Insertion Electromagnetic Flow Transmitter is an adjustable insertion flowmeter featuring electromagnetic technology that accurately and reliably measures fluid velocity in addition to providing several continuous signal outputs. This series is specifically designed to offer superior performance paired with simple installation and use. One unit is adjustable to fit pipe sizes from 4 to 36˝ (102 to 914 mm), and offers several output options including selectable BACnet MS/TP or Modbus® RTU communications protocol over 2-wire RS-485 in addition to the standard analog, frequency and alarm outputs.

Modbus® is a registered trademark of Schneider Automation, Inc.

SPECIFICATIONS

|	
Service	Compatible clean or dirty non coating, conductive liquids.
Range	0 to 20 ft/s (0 to 6 m/s).*
Wetted Materials	Body shaft/fitting: 316 SS; Electrodes: 316 SS; Electrode cap: Polymer/Polystyrene; O-ring: Silicone.
Accuracy	IEF-HX-X: ±0.5% of reading at calibrated velocity; ±1% of reading from 2 to 20 ft/s (0.6 to 6 m/s); ±0.02 ft/s (±0.006 m/s) at <2 ft/s (0.6 m/s); IEF-SX-X: ±1% FS.
Temperature Limits	Ambient: -20 to 160°F (-29 to 71°C); Process: 15 to 250°F (121°C); Storage: -40 to 185°F (-40 to 85°C).
Process Connection	1″ NPT or BSPT with accessory full port ball valve options.
Pressure Limits	400 psi (27.6 bar) @ 100º F (37.8°C).
Pressure Drop	< 0.1 psi at 12 ft/s in 4″ (101.6 mm) and larger pipe.
Outputs	(1) Analog: 4 to 20 mA, 0 to 5 V, 0 to 10 V or 2 to 10 V (display selectable); (1) Pulse/Frequency: 0 to 15 V peak pulse, 0 to 500 Hz or scalable pulse output (display selectable); (2) Alarm: (1) Empty pipe detection or minimum/maximum velocity, (display selectable); (1) Reverse flow output indication.
Power Requirements	12 to 42.4 VDC, 0.25 A @ 24 VDC; 12 to 36 VAC.
Electrical Connection	Removable terminal blocks, model selectable 1/2″ female NPT conduit connection, PG 16 gland or PG 16 gland with (2) 10 ft (3 m) 9 conductor 22 AWG plenum rated cables, accessory cable lengths up to 200 ft (61 m) optional.
Display (-LCD option)	2″ (5.08 cm) x 2″ (5.08 cm) graphic LCD with backlight.
Conductivity	>20 microsiemens
Enclosure Material	Powder coated die cast aluminum.
Enclosure Ratings	NEMA 6P (IP68) (Non display models); NEMA 4X (IP66) (-LCD option).
Agency Approvals	BTL, CE, NSF/ANSI 61 and 372 pending.

COMMUNICATIONS SPECIFICATIONS (-COM OPTION)

|	
Type	BACnet MS/TP or Modbus® RTU communication protocol (default disabled, display selectable).
Supported Baud Rates	9600, 19200, 38400, 57600, 76800, or 115200 bps (display selectable).
Device Load	1/8 unit load.

ADDITIONAL SPECIFICATIONS

|	
Applicable Pipe Material	BACnet MS/TP or Modbus® RTU communication protocol (default disabled, display selectable).
Applicable Pipe Size	9600, 19200, 38400, 57600, 76800, or 115200 bps (display selectable).
Diameter Length Requirements	1/8 unit load.
*For max flowrates >10 ft/s (3 m/s) order option -CC.

HOW TO ORDER

Use the **bold** characters from the chart below to construct a product code.

IEF   -H   N   -CND   -LCD

SERIES
IEF - Insertion electromagnetic flow transmitter

APPLICATION
-**H** - High accuracy; 1% of reading
-**S** - Standard accuracy; 1% FS

APPLICATION
N - 1″ NPT
B - 1″ BSPT

OPTIONS
-LCD - Integral LCD
-COM - BACnet or Modbus® communication protocol (display selectable)
-NIST - Multiple point NIST traceable calibration certificate
-FC - Factory calibration certificate for 0.5% of reading at single point
-CC - Custom configured for specific installation

ELECTRICAL HOUSING CONNECTOR
-CND - 1/2″ female NPT
-PG - PG 16 gland
-10 - PG 16 gland with (2) 10′ (3 m) plenum rated cables

ACCESSORIES

| Model	Description
A-IEF-KIT	Setup kit (includes setup display, thickness gage and measuring tape)

The **SERIES IEF** Insertion Electromagnetic Flow Transmitter is an adjustable insertion flowmeter featuring electromagnetic technology that accurately and reliably measures fluid velocity in addition to providing several continuous signal outputs. This series is specifically designed to offer superior performance paired with simple installation and use. One unit is adjustable to fit pipe sizes from 4 to 36″ (102 to 914 mm), and offers several output options including selectable BACnet MS/TP or Modbus® RTU communications protocol over 2-wire RS-485 in addition to the standard analog, frequency and alarm outputs.

FEATURES/BENEFITS
• Field configurable setup displays (-LCD integral option or remote accessory A-IEF-DSP) allow for ultimate flexibility by accommodating a variety of application configurations with one model through multiple display configurations i.e. pipe size, pipe material, liquid type, analog output, pulse/frequency output, alarm outputs, communication outputs, damping, and calibration factor.
• High performance accuracy is maintained through changes in temperature, density or viscosity.
• Setup Wizard and installation tool are simple to use allowing for quick and precise installation.
• Accessory setup kit A-IEF-KIT ensures exact installation application depth with included thickness gage and measuring tape.
• Long Life Cycle and minimal maintenance requirements with no moving parts to wear or break and electrodes that discourage fouling.
• Isolation valve accessory options allow for installation in operational systems via hot-tap kit or easy removal without system downtime.
• NIST calibration certificate included standard for Carbon Steel Schedule 40 pipes sized 4″ (102 mm), 6″ (150 mm), 8″ (200 mm), and 10″ (250 mm) with high accuracy option.

APPLICATIONS
• Boiler feed water
• Chilled water
• Open and closed loop condenser water
• Irrigation system
• Municipal water distribution
• Process and coolant flow
• Ground water remediation
• Chemical processing
• Pump protection
• Wastewater
• Mining

Safety Information

⚠ **WARNING**

- Only qualified professionals equipped with the necessary required trade skills should install, remove or service this product in any way. Failure to follow the proper installation procedures could lead to death or permanent injury.
- This product is intended to be installed in pressurized pipe applications. In this event, product will be under pressure, caution should be taken to properly vent system prior to installation or removal of the unit. Failure to do so could result in equipment damage and/or serious bodily injury.

CAUTION

- Refer to Model Chart and Specifications for the applicable options to your unit.
- Ensure the unit is sufficiently grounded as stated in this bulletin.
- Depressurize and vent systems without Hot-tap valve prior to installation or removal.
- Confirm the Series IEF wetted material is chemically compatible with process media prior to installation and use.
- Do not exceed maximum temperature and pressure specifications.
- Wear appropriate personal protective equipment during installation, removal and or service of the unit.
- Altering the product construction in any way may adversely affect product operation and voids warranty.
- Prior to attempting to wire or service the Series IEF disconnect from power.

OPERATING PRINCIPLE

- Per Faraday's Law of electromagnetic induction, a voltage is induced in a conductor when it passes through a magnetic field, and the induced voltage will be directly proportional to the velocity of the conductor.
- The Series IEF Flow Transmitter generates pulsating magnetic fields in the probe to induce a voltage into a conductive fluid flowing through the pipe.
- Electrodes located on the probe measure the induced voltage. Electronics and firmware within the enclosure convert the voltage to velocity and flow rate while using various outputs to convey the data to connected systems (i.e. display devices, data acquisition systems, or BTU meters).

INCLUDED WITH THE FLOWMETER

Carefully unpack the shipping container of your new Series IEF Insertion Electromagnetic Flow Transmitter and remove the following items:
- (1) Series IEF Insertion Electromagnetic Flow Transmitter
- (1) A-IEF-INGD Installation Alignment Kit:
  - (1) Alignment Scale
  - (2) Alignment Rods
  - (2) Thumbscrews
- (1) 3 mm Allen Wrench (not shown)
Alignment scale (1)   **Rods (2)**   **Series IEF**

Figure 1

RECOMMENDED TOOLS

- (2) 12″ (300 mm) adjustable wrenches
- (1) 12″ (300 mm) pipe wrench

SETUP

Selecting Installation Location

1. Although the unit may be installed in any orientation, the ideal mounting position is on the side of the pipe (2 o'clock or 10 o'clock position)* as this generally minimizes possible air or sediment interference with the Series IEF. It is not reccomended to mount the unit below the pipe (6 o'clock position).

NOTICE   When installing a unit with an integral display select an installation location that allows for clear viewing of the display and proper earth ground.

Insert the IEF in a pipe via a threaded Tee, Saddle, or welded integrally reinforced branch connection outlet fitting.

If a Hot-Tap option is required, use a 1-1/4″ valve kit with proper mounting hardware available in Model A-IEF-VLV-BR or A-IEF-VLV-SS. A 1″ (25.4 mm) hole in the pipe is required for proper installation.

Figure 2

2. Select a location that will minimize flow distortion with adequate upstream and downstream pipe diameters as displayed. Ideal installation will have a minimum of 10 pipe diameters upstream relative to the instrument and a minimum distance of 5 pipe diameters downstream.
NOT RECOMMENDED   **RECOMMENDED**

FLOW DIRECTION ➡

Figure 3

INSTALLATION
1. To prepare the meter for installation, mount the provided alignment scale to the side of the meter with the two provided thumbscrews. The thumbscrews are to be inserted through the alignment scale slots and into the holes in the side of the lid as shown in Figure 4, finger tighten only. Be sure to orient the alignment scale as shown in figure below. Actual scale setting determined in next step.

USE LID TO ENCLOSURE GAP AS INDICATOR LINE

Figure 4

For Custom Configured Models (-CC Option)
2. Locate the configuration tag attached to the Series IEF to identify the value of the alignment scale setting. Position the alignment scale such that the scale setting is lined-up with the seam of the enclosure as shown in Figure 4. Minor scale marks are in 1/20ths Securely tighten the thumbscrews.
3. Refer to Preparing the Unit for Installation section.

For Field Configurable Models
2. For field configuration, a display is required (-LCD option or accessory A-IEF-DSP) and needs to be powered via normal field wiring or with the AC wall adapter accessory A-IEF-PA (A-IEF-DSP and A-IEF-PA are also available in the accessory setup kit A-IEF-KIT).
3. When using the AC wall adapter and the cable is supplied, connect the red (positive +) and black (common -) wires of the cable bundle marked "A" to the open terminals of the AC wall adapter. This will provide temporary power to the meter to complete the installation set up.
4. For field wiring, refer to the wiring chart tag attached to the Series IEF to identify the terminal block pins for positive (+) and common (-) connection.
5. Unscrew the four captured cover screws using the supplied 3 mm Allen wrench to remove and set aside enclosure cover.
6. Insert one connector of the ribbon cable supplied in the setup kit into the connector labeled "Display" in the middle of the unit. Be sure to orient the keying feature/tab. See Figure 5 below:

KEYING FEATURE

Figure 5

7. Plug the other end of the cable into the bottom of the supplied portable display being sure to orient the keying feature/tab as shown:

KEYING FEATURE

Figure 6

8. Apply power to the unit and the display will turn-on automatically. Follow the on screen directions for entering the necessary parameters to setup the unit and obtain the alignment scale setting value.

NOTICE Precise pipe measurements are required for high performance installation. The A-IEF-KIT includes setup display A-IEF-DSP, thickness gage UTG and measuring tape A-IEF-MSTP used to obtain these measurements. When the precise pipe measurement information is known select Option 2 High Performance setup in the Install Kit option of the display selection

NOTICE When using measuring tape A-IEF-MSTP to measure pipe circumference use the 100ths side to measure the circumference of the pipe without insulation.

Preparing the Unit for installation (Refer to Figure 7)
1. Apply appropriate sealant to the process collet (5) threads such as application suitable sealant tape or paste.
2. Install the process collet (5) in valve (6) then tighten by hand.
3. Tighten the process collet (5) with a wrench using the hex geometry until snug.

NOTICE	Use two wrenches, one to hold the valve and another wrench to turn the process collet.

4. Slowly open the valve handle (7) checking for leaks.
5. If leaks occur around threaded connections, close the valve and tighten those connections.

1. Enclosure
2. Cable Nut
3. Probe Shaft
4. Compression Fitting
5. Process Collet
6. Valve (optional)
7. Valve Handle (optional)
8. Pipe
9. Sensor Probe

Figure 7

NOTICE	Do not adjust housing compression nut at top of probe shaft (3).

Sensor Alignment
A depth and flow alignment installation tool is provided to ensure proper depth insertion and flow alignment. To set the insertion depth verify the alignment scale has not moved from its original setting based on the alignment scale value set previously.

Loosen compression nut (4) to allow the shaft (3) freedom to travel up and down and rotate inside the process collet (5).

Install Depth and Alignment Rods
1. Remove alignment rods from sides of alignment scale by sliding them out.
2. Insert the two rods into the alignment scale as shown.

FLOW ALIGNMENT ROD

ALIGNMENT TOOL

DEPTH ROD

Figure 8

3. Rotate the transmitter so the pipe alignment rod is parallel with the flow in the pipe.

PIPE ALIGNMENT ROD MUST BE PARALLEL WITH PIPE
FLOW DIRECTION →

Figure 9

4. Slide the shaft (3) down into the process collet (5) until the depth rod contacts the pipe. If pipe insulation is present press the rod through the insulation.

   a. Tighten the nut (4) to 15 ft.-lbs (20.3 N m)
   b. Remove the flow alignment rod and loosen the thumbscrews to slide the alignment tool up to allow removal of the depth alignment rod. Store both rods in the storage slots on the sides of the alignment scale. Tighten thumbscrews and leave alignment tool mounted on unit for storage.

GROUNDING

Metallic Pipe
For proper operation the instrument must be earth grounded.
Connect a ground wire to meter housing via the ground lug on the housing collet.
Connect the ground wire to a known earth ground.
If the pipe is grounded, connect the ground wire to the metal pipe using suitable devices such as grounding clamps.

Grounding lug

Figure 10

Non-Metallic Pipes
Connect a ground wire to the transmitter housing per the ground lug on the housing collet.
Connect the ground wire to a known earth ground.
Ground the fluid to earth.

GROUNDING RINGS

Figure 11

POWER SUPPLY
Choose a power supply with a voltage and current rating sufficient to meet the power specifications under all operating conditions.
If the power supply is unregulated, make sure the output voltage remains within the required voltage range under all power line conditions.

| WIRING DIAGRAM				
Cable	Terminal #	Wire Color	Description	Note
A	1	Red	Power Supply Positive	Connect to +24VDC or VAC transformer
A	2	Black	Power Supply Common	Connect to 24VDC/VAC common

B	-	Black	Do not connect	-
A	-	Violet	Do not connect	-
A	-	Grey	Do not connect	-

The Cable column identifying cable A and B is reflective of units that include factory installed cabling.

Wiring PCBA shown in Figure 12 with terminal block numbers as listed in above wiring diagram chart.

Figure 12

Determining probe insertion depth for models with a display
The Series IEF transmitter will calculate the probe insertion depth used with -LCD display option or A-IEF-DSP display when the steps below are followed.

| NOTICE |

It is recommended to use the A-IEF-KIT which includes a setup display A-IEF-DSP, thickness gage UTG and measuring tape A-IEF-MSTP to obtain these measurements. When the precise pipe measurement information is known, select option 2 (High Performance Setup) under the Install Kit Menu when prompted by the display as shown below.   Precise pipe measurements are required for a high performance installation.

```
Installation Kit
1. Standard Setup
2. High Perf. Setup *

    ▲    [ Select ]    ▼
```

1. To measure the pipe circumference remove any existing insulation at the location where the transmitter will be installed. Wrap the tape measure around the pipe to measure the circumference at the selected location using the 100ths side of the tape. Record this measurement for entering into the unit when the circumference measurement is requested.

```
Pipe Circumference
     27.096
        in
    Measure and enter
          value
    ▲    [ Save ]    ▼
```
2. To measure the wall thickness of the pipe use the thickness gage UTG. Following the separate directions provided with the UTG gage and record the thickness. This measurement will be needed to enter into the unit after the circumference data is entered.

Follow the on screen directions for entering the circumference and wall thickness dimensions. See the Electronic Control Data Setup section of this manual for more information.

```
Pipe Wall Thickness
     0.322
        in
    Measure and enter
          value
    ▲    [ Save ]    ▼
```
Determining probe insertion depth for models without a display
For models without a display the following formulas allow for calculating the alignment scale value for setting the depth of the probe into the pipe. Also included are wall thickness charts for various pipe materials and sizes.

Pipes <9 in (228.6 mm) diameter: 7.1625-1/2*D-1.15
Pipes 10 in (254 mm) diameter: 7.1625-1/2*D
Pipes 12 in (304.8 mm) to 36 in (914.4 mm): 7.1625-(0.1*(D-2*WT))+WT

Where D represents the pipe outer diameter and WT represents the pipe wall thickness, both in inches. Measurement of the outside diameter and wall thickness can be accomplished as described in the previous section, Determining probe insertion depth for models with a display, or similar method. Precise pipe measurements are required for a high performance installation.

Position the alignment scale such that the alignment scale setting is lined-up with the seam of the enclosure as shown in Figure 13. Minor scale marks are in 1/20ths Securely tighten the thumbscrews.

USE LID TO ENCLOSURE GAP AS INDICATOR LINE

Printing out configuration values

After installation is complete a table of configuration values can be gathered from the transmitter to print out and insert into one of the hanging plastic envelopes for future reference. The housing cover/display needs to be removed for access to the display port to retrieve the table of configuration values. To do so:

1. Unscrew the four captured cover screws using the supplied 3 mm Allen wrench to remove the enclosure cover. Leave the display cable connected to the main unit.
2. Insert a customer supplied mini-USB cable into the USB connector on the bottom side of the display PCB.
3. Connect the other end into a standard USB port in a laptop.
4. The Series IEF transmitter will appear as a standard USB drive on the laptop.
5. The file name with the configuration values is in the format of: serial number.txt. The serial number can be found on the product label on the side of the transmitter.
6. Print out the configuration values and insert into one of the hanging plastic envelopes for future reference
7. Re-attach the housing cover/display by reinserting the four 3 mm screws.

Removing Series IEF Transmitter

1. To remove the transmitter from an installation without a valve depressurize the pipe and skip to step 4. If installed with a valve loosen compression fitting (4) and withdraw the transmitter shaft fully through the valve until it stops.
2. Tighten compression fitting (4) snug.
3. Close valve (6) via valve handle (7).
4. Remove transmitter by unscrewing process collet (5) from value (6).

CAUTION Be sure to support the housing end of the transmitter to prevent it from flipping while unscrewing process collet (5) as damage may occur to the probe fins.

Network Termination Jumper

On the terminal block PCBA there is a jumper, J1 (see Figure 15), that enables or disables a network termination resistor as defined below:

When the network jumper is placed in the ON position there is a 120 ohm termination resistor in place. When the network jumper is placed in the OFF position there is no termination resistor in place.
Default: OFF

NETWORK TERMINATION JUMPER

Figure 15

Communication Overview

The Insertion Magmeter supports BACnet MS/TP and Modbus® RTU over 2-wire RS-485.

Selection of protocol and configuration of serial parameters require the use of the display.

Number of APDU Retries	3	Unsigned	Read/Write
Max Master	127	Unsigned	Read/Write
Max Info Frames	1	Unsigned	Read
Device Address Binding	Empty	BACnetAddressBinding Unsigned	Read
Database Revision	1	BACnetARRAY[N] of	Read
Property List		BACnetPropertyIdentifier	
Serial Number	"xxxxxxxx"	CharacterString	Read

The default object identifier is 607xxx, where xxx is replaced by the MS/TP MAC address set in the Network Address menu. The object identifier value will change as the MS/TP MAC address changes. However, if a specific object identifier is written via BACnet, then that value is stored and changes to the MS/TP MAC address will no longer affect the object identifier.

Similarly, the default object name includes 607xxx. The object name will reflect the current object identifier. If a specific object name is written via BACnet, then that value is stored and changes to the object identifier will no longer affect the object name.

APDU Timeout values are rounded to the nearest second (1000ms). Values less than 500 will be rounded to 0 and Number of APDU Retries will be set to 0.

Analog Input – Velocity

Property	Default Value	Property Data Type	Access

COV Increment Value

Property	Default Value	Property Data Type	Access
1.0 ft³/s	0.133 ft³/s	13.3681 ft³/s	0.1 ft³/s

Supported Units:
Cubic-feet-per-second (142), Cubic-feet-per-minute (84), Cubic-feet-per-hour (191), Cubic-feet-per-day (248), US-gallons-per-minute (89), US-gallons-per-hour (192), Liters-per-second (87), Liters-per-minute (88), Liters-per-hour (136), Cubic-meters-per-second (85), Cubic-meters-per-minute (165), Cubic-meters-per-hour (135), US-gallons-per-second (515)*, US-gallons-per-day (516)*, Liters-per-day (517)*, Cubic-meters-per-day (518)*

* Non-Standard BACnet unit

Analog Value – Total Flow

Property	Default Value	Property Data Type	Access
Object Identifier	AV2	BACnetObjectIdentifier	Read
Object Name	"Total Flow"	CharacterString	Read
ObjectType	ANALOG_INPUT (0)	BACnetObjectType	Read
Present Value	Current reading	Real	Read
Status Flags	0	BACnetStatusFlags	Read
Event State	NORMAL (0)	BACnetEventState	Read
Reliability	NO_FAULT_DETECTED(0)	BACnetReliability	Read
Out Of Service	FALSE (0)	Boolean	Read/Write
Units	Cubic-feet (79)	BACnetEngineeringUnits	Read/Write
COV Increment	1.0	Real	Read/Write
Property List		BACnetARRAY[N] of BACnetPropertyIdentifier	Read

COV Increment Value

Property	Default Value	Property Data Type	Access
1.0 ft³/s	0.133 ft³/s	13.3681 ft³/s	0.1 ft³/s

Supported Units:
Cubic-feet (79), US-gallons (83), Liters (82), Cubic-meters (80)

Binary Value – Reverse Flow

Property	Default Value	Property Data Type	Access
Object Identifier	BV1	BACnetObjectIdentifier	Read
Object Name	"Reverse Flow"	CharacterString	Read
ObjectType	BINARY_VALUE (5)	BACnetObjectType	Read
Present Value	Inactive (0)	BACnetBinaryPV	Read
Status Flags	0	BACnetStatusFlags	Read
Event State	NORMAL (0)	BACnetEventState	Read
Reliability	NO_FAULT_DETECTED(0)	BACnetReliability	Read
Out Of Service	FALSE (0)	Boolean	Read/Write
Property List		BACnetARRAY[N] of BACnetPropertyIdentifier	Read

This object provides a simple indication of the direction of process flow. When the process fluid is detected as flowing in the normal direction, the present value will return inactive(0). When the process fluid is detected as flowing in the reverse direction, the present value will return active(1).

This object supports COV subscription to allow a monitoring system to easily detect changes in flow direction.

Binary Value – Empty Pipe

Property	Default Value	Property Data Type	Access
Object Identifier	BV2	BACnetObjectIdentifier	Read
Object Name	"Empty Pipe"	CharacterString	Read
ObjectType	BINARY_VALUE (5)	BACnetObjectType	Read
Present Value	Inactive (0)	BACnetBinaryPV	Read
Status Flags	0	BACnetStatusFlags	Read
Event State	NORMAL (0)	BACnetEventState	Read
Reliability	NO_FAULT_DETECTED(0)	BACnetReliability	Read
Out Of Service	FALSE (0)	Boolean	Read/Write
Property List		BACnetARRAY[N] of BACnetPropertyIdentifier	Read

This object provides a simple indication of an error state where no process flow is in contact with the probe. When the process fluid is detected, the present value will return inactive(0). When the process fluid is not detected, the present value will return active(1).

This object supports COV subscription to allow a monitoring system to easily detect this error condition.

Binary Value – Reset Total Flow

Property	Default Value	Property Data Type	Access
Object Identifier	BV3	BACnetObjectIdentifier	Read
Object Name	"Reset Total Flow"	CharacterString	Read
ObjectType	BINARY_VALUE (5)	BACnetObjectType	Read
Present Value	Inactive (0)	BACnetBinaryPV	Read/Write
Status Flags	0	BACnetStatusFlags	Read
Event State	NORMAL (0)	BACnetEventState	Read
Reliability	NO_FAULT_DETECTED(0)	BACnetReliability	Read
Out Of Service	FALSE (0)	Boolean	Read/Write
Property List		BACnetARRAY[N] of BACnetPropertyIdentifier	Read

Writing a value of 1 to the present value of this object will reset the value of Total Flow to 0. Writing a value of 0 has no effect.

BitString Value – Status Flags

Property	Default Value	Property Data Type	Access
Object Identifier	BSV1	BACnetObjectIdentifier	Read
Object Name	"Status Flags"	CharacterString	Read
ObjectType	BITSTRING_VALUE (39)	BACnetObjectType	Read
Present Value	{FFFFFFFF FFFF}	BitString	Read
Status Flags	0	BACnetStatusFlags	Read
Event State	NORMAL (0)	BACnetEventState	Read
Reliability	NO_FAULT_DETECTED(0)	BACnetReliability	Read
Out Of Service	FALSE (0)	Boolean	Read/Write
Property List		BACnetARRAY[N] of BACnetPropertyIdentifier	Read

This object provides a means for the meter to convey additional error status to a BACnet client. See the table below for a definition of each bit.

Bit	Meaning
0	Error: Reading/Writing Non-voltaile storage
1	Reserved
2	Error: Process measurement error

BACnet Services
ReadProperty (DS-RP-B) ReadPropertyMultiple(DS-RPM-B)
WriteProperty (DS-WP-B) WritePropertyMultiple(DS-WPM-B)

Device Communication Control Service (DM-DCC-B)
This device supports the Device Communication Control Service BIBB. The optional time duration in minutes is also supported. This device is configured with a password that must be provided to successfully execute this command. The password is "Dwyer".

Reinitialize Device Service (DM-RD-B)
This device supports the Reinitialize Device Service BIBB. The supported device states are COLDSTART and WARMSTART. All other states return error. This device is configured with a password that must be provided to successfully execute this command. The password is "Dwyer".

SubscribeCOV Service (DS-COV-B)
This device supports the SubscribeCOV Service BIBB to allow easy monitoring of input data.
• Up to seven (7) concurrent subscriptions
• Confirmed and Unconfirmed COV Notifications
• Fixed lifetime value up to 86400 seconds (24 hours).
• Indefinite lifetime supported.

MODBUS®
Modbus® Functions
The device supports the following functions

Function Name	Function Code
Read Holding Registers	03
Read Input Registers	04
Write Single Register	06
Write Multiple Registers	16

Modbus® Registers
Input Registers

Register	Description	Data Type	Range
0001	Velocity	32bit Float	
0003	Flow	32bit Float	
0005	Total Flow	32bit Float	
0007	Reverse Flow	Unsigned 16bit Integer	0 – Normal
0008	Empty Pipe		1 – Reverse
0009 - 0010	Status Flags	Unsigned 16bit Integer	0 – Process detected
8001 - 8016	Model Number		1 – Process not detected
8017 - 8020	Serial Number	Unsigned 16bit Integer	See BACnet BitString
8021 - 8028	Firmware Version		Object "Status Flags"
8029 - 8032	Date Code	String	"IEF-HN-10-COM"
		String	"xxxxxxx"
		String	"x.x.x"
		String	"xxxxxxx"

The String data type is read as a stream of ASCII characters with the first character sent in the MSB of the first register and the second character sent in the LSB of the first register and so on. If the string is shorter than the allotted size, the remaining bytes will be zero padded.

Holding Registers

Register	Description	Data Type	Range
0001 – 0020	Device Name	String	
0021	Velocity Unit	Unsigned 16bit integer	0 – 7
0022	Flow Unit	Unsigned 16bit integer	0 – 15
0023	Volume Unit	Unsigned 16bit integer	0 – 3
0024	Reset Total Flow	Unsigned 16bit integer	0 or 1
0025	Reset Device	Unsigned 16bit integer	0 or 1

Device Name: A string, up to 40 characters long, that will be displayed on the LCD (if present). When reading or writing, all 20 registers must be requested. Strings less than 40 characters shall be 0 padded.

Velocity Unit: Selects the unit of velocity for the value in the velocity register. See Table 1.

Flow Unit: Selects the unit of flow for the value in the Flow register. See Table 2.

Volume Unit: Selects the unit of volume for the value in the Total Flow register. See Table 3.

Reset Total Flow: When a value of 1 is written to this register, the value in the Total Flow register is reset to 0. Writing a value of 0 has no effect. This register will always return a 0 when read.

Reset Device: When a value of 1 is written to this register, the device will perform a warm reset after 5 seconds. Writing a value of 0 has no effect. This register will always return 0 when read.

TABLE 1: VELOCITY UNIT VALUES	
Value	**Unit**
*0	Feet-per-second (ft/s)
1	Feet-per-minute (ft/min)
2	Feet-per-hour (ft/hr)
3	Feet-per-day (ft/day)
4	Meters-per-second (m/s)
5	Meters-per-minute (m/min)
6	Meters-per-hour (m/hr)
7	Meters-per-day (m/day)

TABLE 2: FLOW UNIT VALUES	
Value	**Unit**
*0	Cubic-feet-per-second (ft^3/s)
1	Cubic-feet-per-minute (ft^3/min)
2	Cubic-feet-per-hour (ft^3/hr)
3	Cubic-feet-per-day (ft^3/day)
4	Gallons-per-second (gal/s)
5	Gallons-per-minute (gal/min)
6	Gallons-per-hour (gal/hr)
7	Gallons-per-day (gal/day)
8	Liters-per-second (L/s)
9	Liters-per-minute (L/min)
10	Liters-per-hour (L/hr)
11	Liters-per-day (L/day)
12	Cubic-meters-per-second (m^3/s)
13	Cubic-meters-per-minute (m^3/min)
14	Cubic-meters-per-minute (m^3/min)
15	Cubic-meters-per-day (m3/day)

TABLE 3: VOLUME UNIT VALUES	
Value	**Unit**
0	Cubic-feet (ft^3)
*1	Gallons (gal)
2	Liters (L)
3	Cubic-meters (m3)

* Default unit

Multi-Address Support

Multi-Address support allows a register to be read or written to using different byte orientations specified by the address range. For example, input register 0003 can also be read at 2003, 4003 and 6003 with different byte orientations as listed in Table 7. Registers that do not have multi-address support are only available in Big-Endian byte orientation (Modbus® standard).

		Float/32bit Values				16Bit Values	
		Register 1		Register 2		Register 3	
Byte Order	**Address Range**	MSB			LSB	MSB	LSB
Big-Endian	1-2000	A	B	C	D	A	B
Byte Swap	2001-4000	B	A	D	C	B	A
Word Swap	4001-6000	C	D	A	B	A	B
Little-Endian	6001-8000	D	C	B	A	B	A

Electronic Control Setup -LCD Display Option or A-IEF-DSP Accessory
 **Basic information**
  1. Turn on the power to the Display/Menu.

NOTICE	At power ON, the Dwyer Logo, Serial Number and Firmware Version of the Transmitter is displayed.

  2. If a Transmitter is NOT configured, a main configuration wizard starts.
  3. If the Transmitter is configured, the process data is displayed.

SERIAL NUMBER **FIRM WARE VERSION**

S/N:123456 FV:1.0.0R

Navigation Basics
  1. The **UP** ▲ /**DOWN** ▼ buttons change the selected option or increase or decrease the current value.
  2. The **RIGHT** ► button advances the display to the next menu without changing the current setting.
  3. The **LEFT** ◄ button returns the display to the previous menu without changing the current setting.
  4. The **ENTER** ↵ button accepts the selected setting or value and advances to the next menu.
  5. The **MENU** ≡ button transitions the display to the main menu. Any unsaved changes will be lost.

Menu Basics
  1. Option Menus:
    • The current option is indicated by a highlight bar. The highlight bar is moved with the UP and DOWN buttons.
    • The active option is indicated by an asterisk (*) symbol to the far right of the option name.
  2. Value Menus:
    • The active value is always displayed when the menu is displayed.
    • To reset a changed value to the active value, use the LEFT ◄ button to return to the previous menu, then the RIGHT ► button to advance to the value menu again.
  3. Press & Hold the UP ▲ or DOWN ▼ button to continuously increase or decrease the value.
    Note: The value will be increased or decreased by a larger amount the longer the button is held.

Main Configuration Wizard
  1. Language Selection:
    • At the Language Screen elect the Language:

NOTICE	The menu default language is English.

    • If necessary, select another language by moving the highlighted bar with the UP ▲ /DOWN ▼ Arrows and press the Enter Button ↵ to select the Language.

```
Language
1. English          *
2. Español

             [Select]
▲                      ▼
```

  2. Unit System Selection Menu:
    • This option determines which units will be available in future menus.
    • The Default is English
    • If necessary, select a different Unit of measure by moving the highlighted bar with the UP ▲ /DOWN ▼ Arrows and press the Enter button ↵ to select he Unit.
```
Units
1. English          *
2. Metric

             [Select]
▲                      ▼
```
  3. Velocity Unit Menu:
    • This option determines how the calculated volume velocity is displayed.
   • The Default is Feet-Per-Second.

```
Velocity
1. ft/s             *
2. ft/min
3. ft/hr
4. ft/day

             [Select]
▲                      ▼
```
  4. Flow Unit Menu:
    • This option determines how the calculated volume flow is displayed.
    • The Default is Cubic-Feet-Per-Second.

```
Flow
1. ft³/s            *
2. ft³/min
3. ft³/hr
4. ft³/day
5. gal/s
6. gal/min
7. gal/hr
8. gal/day

             [Select]
▲                      ▼
```
5. Volume Unit Menu:
   - This option determines how the totalized flow is displayed.
   - The Default is Gallons.

```
Volume
1. ft³
2. gal          *

  ▲    [ Select ]    ▼
```
Pipe Configuration Wizard
1. Pipe Material Menu:
   - This option helps determine the pipe dimensions as well as account for different material properties.
   - The Default is Carbon Steel

```
Pipe Material
1. Carbon Steel    *
2. Copper
3. Plastic/PVC
4. Stainless Steel

  ▲    [ Select ]    ▼
```
2. Install Kit Menu (High Performance):
   - This option determines how the pipe dimensions will be collected.
   - If a high accuracy Transmitter was purchased, then a high accuracy installation kit must be used to ensure correctness.
   - Default: High Performance Setup.

```
Installation Kit
1. Standard Setup
2. High Perf. Setup *

  ▲    [ Select ]    ▼
```

a. Pipe Circumference Menu (High Performance):
   - This value is the outside circumference of the pipe where the Transmitter is installed.
   - The circumference can be measured with the tape included in the high performance installation kit.
   - Default: 27.096in (~8in diameter)

```
Pipe Circumference
     27.096
        in
   Measure and enter
        value
  ▲    [ Save ]    ▼
```

b. Wall Thickness Menu (High Performance):
   - This value is the pipe wall thickness where the Transmitter is installed.
   - The thickness can be measured with the gauge included in the high performance installation kit.
   - Default: 0.322in ↵

```
Pipe Wall Thickness
     0.322
        in
   Measure and enter
        value
  ▲    [ Save ]    ▼
```

3. Install Kit Menu (Standard):
   - Nominal Pipe Size Menu
   - Select the diameter of the installation pipe from the list of standard pipe diameters. If your nominal diameter is not listed or you have actual OD data, select Other and enter the pipe diameter directly.
   - Default: 8 in

```
Nominal Pipe Size
1. 4 in
2. 5 in
3. 6 in
4. 8 in          *
5. 10 in
6. 12 in
7. 14 in
8. 16 in
9. 18 in
  ▲    [ Select ]    ▼
```
a. Install Kit Menu (Standard):
   - Wall Thickness Menu:
   - Select the wall thickness of the installation pipe from the list of standard pipe wall thicknesses.
   - If your wall thickness is not listed, select Other and enter the pipe wall thickness directly.
   - The options available depend on the pipe material selected.
   - Default: Varies with selected pipe material.

```
Pipe Wall Thickness
1. Schedule 5
2. Schedule 10
3. Schedule 40   *
4. Schedule 80
5. Other

  ▲    [ Select ]    ▼
```

4. Pipe Insertion Depth Display:
   • This screen shows the calculated insertion depth based on the values previously entered.
   • Using the installation alignment kit provided with the IEF, set the depth to the value displayed:

```
Alignment Scale Value
       1.70

    Adjust alignment
    scale to the value
         above
 ◀     [ OK ]      ▶
```
5. Liquid Type Menu:
   • This option specifies the process liquid to be measured.
   • If Ethylene Glycol is selected, another menu will allow the concentration to be entered.
   • Default: Water

```
Liquid Type
1. Ethylene Glycol
2. Water              *

 ▲     [ Select ]    ▼
```
6. Pipe Configuration Summary Display: High Performance:
   • This screen shows a summary of the settings entered in the pipe configuration wizard when a high performance installation kit is used. High performance Setup
7. Continue to Analog Configuration Wizard Question:
   • If Continue is selected, the next menu displayed will be in the Analog configuration wizard.
   • If Save & Exit is selected, the settings and values entered during the Pipe configuration wizard will be stored and put into effect.
   • Then the display will show process data. Regardless of selection, the ENTER button must be used to choose either option.
   • Default: Continue ⏎

```
   Continue to Analog
 Output Configuration
      or Exit setup?

             Continue
          Save & Exit

Troubleshooting Guide

A status blink code is conveyed by the blinking of the status LED (Figure 17) using the following parameters.

A blink is defined as the LED is ON for 200ms followed by the LED being OFF for 200ms.

If a status code has a tens digit, the tens digit blink code is created and then followed by a 750ms delay OFF time. Then the ones digit blink code is created.

After a blink code is displayed, there is an OFF time of 2 sec before the blink code is displayed again.

If more than one condition is true, the condition with the highest code will be displayed.

Example: Item 3, Invalid Factory Configuration with a blink code of 11.

There would be a state of the LED being ON for 200 msec, then OFF for 200 msec, then OFF for 750 msec, then ON for 200 msec, then OFF for 200 msec followed by off for 2 sec before repeating this sequence.

STATUS LED

Figure 17

| Item	Condition	Status LED Blink Code	Description	Corrective Action
1	Invalid value	1	Invalid calibration (Value display on LCD)	Return to factory, calibration required
2	Empty pipe	2	The probe is not submerged in the process fluid	Ensure the pipe is properly filled, ensure proper installation depth

If a reverse flow condition exists an "R" with an exclamation mark in a triangle will appear as shown below:

If an empty pipe condition exists an "E" with an exclamation mark in a triangle will appear as shown below:

If velocity alarm condition exists a "V" with an exclamation mark in a triangle will appear as shown below:

MAINTENANCE/REPAIR

Upon final installation of the Series IEF, no routine maintenance is required, however if recalibration is desired the unit must be returned to Dwyer Instruments, Inc. to be calibrated. Contact customer service to receive a Return Goods Authorization number before shipping you product back for calibration. The Series IEF is not field serviceable and should be returned if repair is needed. Field repair should not be attempted and may void the warranty.

WARRANTY/RETURN

Refer to "Terms and Conditions of Sale" in our catalog or on our website. Contact customer service to receive a Return Goods Authorization number before shipping your product back for repair. Be sure to include a brief description of the problem plus any relevant application notes.

Series IEF Insertion Electromagnetic Flow Transmitter
Specifications - Installation Instructions

For full Installation and Operating Instructions refer to Bulletin F-IEF-F at www.dwyer-inst.com/SeriesIEF

Shown with A-IEF-VLV-BR accessory valve

-LCD option shown

The **SERIES IEF** Insertion Electromagnetic Flow Transmitter is an adjustable insertion flowmeter featuring electromagnetic technology that accurately and reliably measures fluid velocity in addition to providing several continuous signal outputs. This series is specifically designed to offer superior performance paired with simple installation and use. One unit is adjustable to fit pipe sizes from 4 to 36″ (101.6 to 914.4 mm), and offers several output options including selectable BACnet MS/TP or Modbus® RTU communications protocol over 2-wire RS-485 in addition to the standard analog, frequency and alarm outputs.

FEATURES/BENEFITS

• Field configurable, integral or remote setup displays (-LCD option or accessory A-IEF-DSP) allow for ultimate flexibility by accommodating a variety of application configurations with one model through multiple display configurations i.e. pipe size, pipe material, liquid type, analog output, pulse/frequency output, alarm outputs, communication outputs, damping, and calibration factor.
• High performance accuracy is maintained through temperature, density or viscosity.
• Setup Wizard and installation tool are simple to use allowing for quick and precise installation.
• Accessory setup kit A-IEF-KIT ensures exact installation application depth with included thickness gage and measuring tape.
• Long Life Cycle and minimal maintenance requirements with no moving parts to wear or break and electrodes that discourage fouling.
• Isolation valve accessory options allow for installation in operational systems via hot-tap kit or easy removal without system downtime.
• NIST calibration certificate included standard for Carbon Steel Schedule 40 pipes sized 4″ (100 mm), 6″ (150 mm), 8″ (200 mm), and 10″ (250 mm) with high accuracy option.

APPLICATIONS

• Boiler feed water
• Chilled water
• Open and closed loop condenser water
• Irrigation system
• Municipal water distribution
• Process and coolant flow
• Ground water remediation
• Chemical processing
• Pump protection
• Wastewater
• Mining

SPECIFICATIONS

Service: Compatible clean or dirty non coating, conductive liquids.
Range: 0 to 20 ft/s (0 to 6 m/s).
Wetted Materials: Body shaft/fitting: 316SS; Electrodes: 316SS; Electrode cap: Polymer/Polystyrene; O-ring: Silicone.
Accuracy: IEF-HX-X: ±0.5% of reading at calibrated velocity; ±1% of reading from 2 to 20 ft/s (0.6 to 6 m/s) ±0.02 ft/s (±0.006 m/s) at < 2 ft/s (0.6 m/s). IEF-SX-X: ±1% FS.
Temperature Limits: Ambient: -20 to 160°F (-29 to 71°C); Process: 15 to 250°F (-9 to 121°C); Storage: -40 to 185°F (-40 to 85°C).
Process Connection: 1″ NPT or BSPT with accessory full port ball valve options.
Pressure Limits: 400 psi (27.6 bar) @ 100° F (37.8°C).
Pressure Drop: < 0.1 psi at 12 ft/s in 4″ (101.6 mm) and larger pipe.
Outputs:
(1) Analog: 4 to 20 mA, 0 to 5 V, 0 to 10 V or 2 to 10 V (display selectable);
(1) Pulse/Frequency: 0 to 15 V peak pulse, 0 to 500 Hz or scalable pulse output (display selectable);
(2) Alarms: (1) Empty pipe detection or minimum/maximum velocity, (display selectable); (1) Reverse flow output indication.
Power Requirements: 12 to 42.4 VDC, .25 A @ 24 VDC; 12 to 36 VAC.
Electrical Connection: Removable terminal blocks, model selectable 1/2″ female NPT conduit connection, PG 16 gland or PG 16 gland with (2) 10 ft (3 m) 9 conductor 22 AWG plenum rated cables, accessory cable lengths up to 200 ft (61 m) optional.
Display (-LCD option): 2″ (5.08 cm) x 2″ (5.08 cm) graphic LCD with backlight.
Conductivity: >20 microsiemens.
Enclosure Material: Powder coated die cast aluminum.
Enclosure Ratings: NEMA 6P (IP68) (Non display models); NEMA 4X (IP66) (-LCD option).
Agency Approvals: BTL, CE, NSF/ANSI 61 and 372 pending.

COMMUNICATIONS (-COM OPTION)

Type: BACnet MS/TP or Modbus® RTU communication protocol (default disabled, display selectable).
Supported Baud Rates: 9600, 19200, 38400, 57600, 76800, or 115200 bps (display selectable).
Device Load: 1/8 unit load.

ADDITIONAL SPECIFICATIONS

Applicable Pipe Material: Most popular plastic and metal pipes; i.e. Carbon steel, SS, copper, UPVC/PVDF, galvanized steel, mild steel, and brass.
Applicable Pipe Size: IEF-HX-X: 4 to 10″ (101 to 254 mm); IEF-SX-X: 4 to 36″ (101 to 914 mm).
Diameter Length Requirements: >10 upstream, >5 downstream.

MODEL CHART

Example	IEF	-H	N	-CND	-LCD	IEF-HN-CND-LCD
Series	IEF					Insertion electromagnetic flow transmitter
Accuracy		H				High accuracy; 1% of reading
		S				Standard accuracy; 1% FS
Process Connection			N			1″ NPT
			B			1″ BSPT
Electrical Housing Connector				CND		1/2″ female NPT
				PG		PG 16 gland
				10		PG 16 gland with (2) 10′ (3 m) plenum rated cables
Options					LCD	Integral LCD
					COM	BACnet or Modbus® communication protocol (display selectable)
					NIST	Multiple point NIST traceable calibration certificate
					FC	Factory calibration certificate for 0.5% of reading at single point
					CC	Custom configured for specific installation

ACCESSORIES

Model	Description
A-IEF-KIT	Setup kit (includes setup display, thickness gage and measuring tape)
A-IEF-DSP	Setup display
A-IEF-CBL-50	Plenum rated cable 50 ft (15.2 m)
A-IEF-VLV-BR	1-1/4″ full port isolation valve brass
A-IEF-VLV-SS	1-1/4″ full port isolation valve 316SS
A-IEF-INGD	Installation alignment kit
A-IEF-PA	AC wall adapter

INCLUDED WITH THE FLOWMETER

Carefully unpack the shipping container of your new Series IEF Insertion Electromagnetic Flow Transmitter and remove the following items:
- (1) Series IEF Insertion Electromagnetic Flow Transmitter
- (1) A-IEF-INGD Installation Alignment Kit:
    - (1) Alignment Scale
    - (2) Alignment Rods
    - (2) Thumbscrews
- (1) 3 mm Allen Wrench (not shown)

RULER (2 PLACES)

BODY

Alignment scale (2)

Thumbscrew (2)

ROD

Rod (2)

Series IEF

Figure 1

RECOMMENDED TOOLS
- (2) 12″ (300 mm) adjustable wrenches
- (1) 12″ (300 mm) pipe wrench

SETUP

Selecting Installation Location

1. Although the unit may be installed in any orientation, the ideal mounting position is on the side of the pipe (2 o'clock or 10 o'clock position) as this generally minimizes possible air or sediment interference with the Series IEF.

    Note: When installing a unit with an integral display select an installation location that allows for clear viewing of the display and proper earth ground.

    Insert the IEF in a pipe via a threaded Tee, Saddle, or welded integrally reinforced branch connection outlet fitting.

    If a Hot-Tap option is required, use a 1-1/4″ valve kit with proper mounting hardware available in Model A-IEF-VLV-BR or A-IEF-VLV-SS. A 1″ (25.4 mm) hole in the pipe is required for proper installation.

Figure 2

2. Select a location that will minimize flow distortion with adequate upstream and downstream pipe diameters as displayed. Ideal installation will have a minimum of 10 pipe diameters upstream relative to the instrument and a minimum distance of 5 pipe diameters downstream.

FLOW DIRECTION

Figure 3

INSTALLATION

1. To prepare the meter for installation, mount the provided alignment scale to the side of the meter with the two provided thumbscrews. The thumbscrews are to be inserted through the alignment scale slots and into the holes in the side of the lid as shown in Figure 4, finger tighten only. Be sure to orient the alignment scale as shown in figure below. Actual scale setting determined in next step.

USE LID TO ENCLOSURE GAP AS INDICATOR LINE

Figure 4

For Custom Configured Models (-CC Option)

2. Locate the configuration tag attached to the Series IEF to identify the value of the alignment scale setting. Position the alignment scale such that the scale setting is lined-up with the seam of the enclosure as shown in Figure 4. Minor scale marks are in 1/20ths Securely tighten the thumbscrews.
3. Refer to Preparing the Unit for Installation section.

For Field Configurable Models

2. For field configuration a display is required (-LCD option or accessory A-IEF-DSP) and needs to be powered via normal field wiring or with the AC wall adapter accessory A-IEF-PA (A-IEF-DSP and A-IEF-PA are also available in the accessory setup kit A-IEF-KIT).
3. When using the AC wall adapter and the cable is supplied, connect the red (positive +) and black (common -) wires of the cable bundle marked "A" to the open terminals of the AC wall adapter. This will provide temporary power to the meter to complete the installation set up.
4. For field wiring refer to the wiring chart tag attached to the Series IEF to identify the terminal block pins for positive (+) and common (-) connection.
5. Unscrew the four captured cover screws using the supplied 3 mm Allen wrench to remove and set aside enclosure cover.
6. Insert one connector of the ribbon cable supplied in the setup kit into the connector labeled "Display" in the middle of the unit. Be sure to orient the keying feature/tab. See Figure 5 below:
KEYLINE FEATURE

Figure 5

7. Plug the other end of the cable into the bottom of the supplied portable display being sure to orient the keying feature/tab as shown:

KEYLINE FEATURE

Figure 6

8. Apply power to the unit and the display will turn-on automatically. Follow the on screen directions for entering the necessary parameters to setup the unit and obtain the alignment scale setting value.

| NOTICE | Precise pipe measurements are required for high performance installation. The A-IEF-KIT includes setup display A-IEF-DSP, thickness gage UTG and measuring tape A-IEF-MSTP used to obtain these measurements. When the precise pipe measurement information is known select Option 2 High Performance setup in the Install Kit option of the display selection |

| NOTICE | When using measuring tape A-IEF-MSTP to measure pipe circumference use the 100ths side to measure the circumference of the pipe without insulation. |

Preparing the Unit for installation (Refer to Figure 7)

1. Apply appropriate sealant to the process collet (5) threads such as application suitable sealant tape or paste.
2. Install the process collet (5) in valve (6) then tighten by hand.
3. Tighten the process collet (5) with a wrench using the hex geometry until snug.

| NOTICE | Use two wrenches, one to hold the valve and another wrench to turn the process collet. |

4. Slowly open the valve handle (7) checking for leaks.
5. If leaks occur around threaded connections, close the valve and tighten those connections.

1. Enclosure
2. Cable Nut
3. Probe Shaft
4. Compression Fitting
5. Process Collet
6. Valve (optional)
7. Valve Handle (optional)
8. Pipe
9. Sensor Probe

Figure 7

| NOTICE | Do not adjust housing compression nut at top of probe shaft (3). |

Sensor Alignment
A depth and flow alignment installation tool is provided to ensure proper depth insertion and flow alignment. To set the insertion depth verify the alignment scale has not moved from its original setting based on the alignment scale value set previously.

Loosen compression nut (4) to allow the shaft (3) freedom to travel up and down and rotate inside the process collet (5).

Install Depth and Alignment Rods
1. Remove alignment rods from sides of alignment scale by sliding them out.
2. Insert the two rods into the alignment scale as shown.

FLOW ALIGNMENT ROD — ALIGNMENT TOOL

DEPTH ROD

Figure 8

3. Rotate the transmitter so the pipe alignment rod is parallel with the flow in the pipe.

PIPE ALIGNMENT ROD MUST BE PARALLEL WITH PIPE

FLOW DIRECTION

Figure 9

4. Slide the shaft (3) down into the process collet (5) until the depth rod contacts the pipe. If pipe insulation is present press the rod through the insulation.

    a. Tighten the nut (4) to 15 ft.-lbs (20.3 N m)
    b. Remove the flow alignment rod and loosen the thumbscrews to slide the alignment tool up to allow removal of the depth alignment rod. Store both rods in the storage slots on the sides of the alignment scale. Tighten thumbscrews and leave alignment tool mounted on unit for storage.

GROUNDING

Metallic Pipe
For proper operation the instrument must be earth grounded.
Connect a ground wire to meter housing via the ground lug on the housing collet.
Connect the ground wire to a known earth ground.
If the pipe is grounded, connect the ground wire to the metal pipe using suitable devices such as grounding clamps.

Grounding lug

Figure 10

Non-Metallic Pipes
Connect a ground wire to the transmitter housing per the ground lug on the housing collet.
Connect the ground wire to a known earth ground.
Ground the fluid to earth.

GROUNDING RINGS

Figure 11

POWER SUPPLY
Choose a power supply with a voltage and current rating sufficient to meet the power specifications under all operating conditions.
If the power supply is unregulated, make sure the output voltage remains within the required voltage range under all power line conditions.

Series IEF Insertion Electromagnetic Flow Transmitter

BACnet / Modbus® - Operating Instruction

Network Termination Jumper
On the terminal block PCBA there is a jumper, J1 (see figure UUUU), that enables or disables a network termination resistor as defined below:
When the network jumper is placed in the ON position there is a 120 ohm termination resistor in place. When the network jumper is placed in the OFF position there is no termination resistor in place.
Default: OFF

NETWORK TERMINATION JUMPER
Modbus® is a registered trademark of Schneider Automation, Inc.

Insertion Electromagnetic Flowmeter (IEF): Communication Overview

The Insertion Magmeter supports BACnet MS/TP and Modbus® RTU over 2-wire RS485.

Selection of protocol and configuration of serial parameters require the use of the display.

BACnet Object Overview
Supported BACnet Objects

Object Type	Dynamically Creatable	Dynamically Creatable	Object Identifier	Object Name
Device	No	No	607xxx	Series IEF 607xxx
Analog Input	No	No	AI1	Velocity
Analog Value	No	No	AV1	Flow
			AV2	Total Flow
Binary Value	No	No	BV1	Reverse Flow
			BV2	Empty Pipe
			BV3	Reset Total Flow
BitString Value	No	No	BSV1	Status Flags

BACnet Objects:
Device Object

Property	Default Value	Property Data Type	Access
Object Identifier	607xxx	BACnetObjectIdentifier	Read/Write
Object Name	"Series IEF 607xxx"	CharacterString(40)	Read/Write
ObjectType	DEVICE(8)	BACnetObjectType	Read
System Status	Operational(0)	BACnetDeviceStatus	Read
Vendor Name	"Dwyer Instruments, Inc."	CharacterString	Read
Vendor Identifier	607	Unsigned	Read
Model Name	"IEF-HN-10-COM"	CharacterString	Read
Firmware Revision	"x.x.x"	CharacterString	Read
Application Software Version	"x.x"	CharacterString	Read
Location		CharacterString(32)	Read/Write
Description		CharacterString(32)	Read/Write
Protocol Version	1	Unsigned	Read
Protocol Revision	14	Unsigned	Read
Protocol Services Supported	See BACnet Services below	BACnetServicesSupported	Read
Protocol Object Types Supported	See Table Above	BACnetObjectTypesSupported	Read
Object List	See Table Above	BACnetArray	Read
Active COV Subscriptions		List of BACnetCOVSubscription	Read
Maximum APDU Length Accepted	480	Unsigned	Read
Maximum APDU Length Accepted	NO_SEGMENTATION (3)	BACnetSegmentation	Read
APDU Timeout	6000	Unsigned	Read/Write
Number of APDU Retries	3	Unsigned	Read/Write
Max Master	127	Unsigned	Read/Write
Max Info Frames	1	Unsigned	Read
Device Address Binding	Empty	BACnetAddressBinding Unsigned	Read
Database Revision	1	BACnetARRAY[N] of	Read
Property List		BACnetPropertyIdentifier	
Serial Number	"xxxxxxxx"	CharacterString	Read

The default object identifier is 607xxx, where xxx is replaced by the MS/TP MAC address set in the Network Address menu. The object identifier value will change as the MS/TP MAC address changes. However, if a specific object identifier is written via BACnet, then that value is stored and changes to the MS/TP MAC address will no longer affect the object identifier.

Similarly, the default object name includes 607xxx. The object name will reflect the current object identifier. If a specific object name is written via BACnet, then that value is stored and changes to the object identifier will no longer affect the object name.

APDU Timeout values are rounded to the nearest second (1000ms). Values less than 500 will be rounded to 0 and Number of APDU Retries will be set to 0.

Analog Input – Velocity

Property	Default Value	Property Data Type	Access
Object Identifier	AI1	BACnetObjectIdentifier	Read
Object Name	"Velocity"	CharacterString	Read
ObjectType	ANALOG_INPUT (0)	BACnetObjectType	Read
Present Value	Current reading	Real	Read
Status Flags	0	BACnetStatusFlags	Read
Event State	NORMAL (0)	BACnetEventState	Read
Reliability	NO_FAULT_DETECTED(0)	BACnetReliability	Read
Out Of Service	FALSE (0)	Boolean	Read/Write
Units	Feet-per-second (76)	BACnetEngineeringUnits	Read/Write
COV Increment	0.5	Real	Read/Write
Property List		BACnetARRAY[N] of BACnetPropertyIdentifier	Read

COV Increment Value

Property	Default Value	Property Data Type	Access
0.5 ft/s	0.1 ft/s	10.0 ft/s	0.1 ft/s

Supported Units:
Feet-per-second (76), Feet-per-minute (77), Meters-per-second (74), Meters-per-minute (163), Meters-per-hour (164), Feet-per-hour (512)*, Feet-per-day (513)*, Meters-per-day (514)*

* Non-Standard BACnet unit

Analog Value – Flow

Property	Default Value	Property Data Type	Access
Object Identifier	AI1	BACnetObjectIdentifier	Read
Object Name	"Flow"	CharacterString	Read
ObjectType	ANALOG_INPUT (0)	BACnetObjectType	Read
Present Value	Current reading	Real	Read
Status Flags	0	BACnetStatusFlags	Read
Event State	NORMAL (0)	BACnetEventState	Read
Reliability	NO_FAULT_DETECTED(0)	BACnetReliability	Read
Out Of Service	FALSE (0)	Boolean	Read/Write
Units	Cubic-feet-per-second (142)	BACnetEngineeringUnits	Read/Write
COV Increment	0.5	Real	Read/Write
Property List		BACnetARRAY[N] of BACnetPropertyIdentifier	Read

COV Increment Value

Property	Default Value	Property Data Type	Access
1.0 ft³/s	0.133 ft³/s	13.3681 ft³/s	0.1 ft³/s

Supported Units:
Cubic-feet-per-second (142), Cubic-feet-per-minute (84), Cubic-feet-per-hour (191), Cubic-feet-per-day (248), US-gallons-per-minute (89), US-gallons-per-hour (192), Liters-per-second (87), Liters-per-minute (88), Liters-per-hour (136), Cubic-meters-per-second (85), Cubic-meters-per-minute (165), Cubic-meters-per-hour (135), US-gallons-per-second (515)*, US-gallons-per-day (516)*, Liters-per-day (517)*, Cubic-meters-per-day (518)*

* Non-Standard BACnet unit

Analog Value – Total Flow

Property	Default Value	Property Data Type	Access
Object Identifier	AV2	BACnetObjectIdentifier	Read
Object Name	"Total Flow"	CharacterString	Read
ObjectType	ANALOG_INPUT (0)	BACnetObjectType	Read
Present Value	Current reading	Real	Read
Status Flags	0	BACnetStatusFlags	Read
Event State	NORMAL (0)	BACnetEventState	Read
Reliability	NO_FAULT_DETECTED(0)	BACnetReliability	Read
Out Of Service	FALSE (0)	Boolean	Read/Write
Units	Cubic-feet (79)	BACnetEngineeringUnits	Read/Write
COV Increment	1.0	Real	Read/Write
Property List		BACnetARRAY[N] of BACnetPropertyIdentifier	Read

COV Increment Value

Property	Default Value	Property Data Type	Access
1.0 ft³/s	0.133 ft³/s	13.3681 ft³/s	0.1 ft³/s

Supported Units:
Cubic-feet (79), US-gallons (83), Liters (82), Cubic-meters (80)

Binary Value – Reverse Flow

Property	Default Value	Property Data Type	Access
Object Identifier	BV1	BACnetObjectIdentifier	Read
Object Name	"Reverse Flow"	CharacterString	Read
ObjectType	BINARY_VALUE (5)	BACnetObjectType	Read
Present Value	Inactive (0)	BACnetBinaryPV	Read
Status Flags	0	BACnetStatusFlags	Read
Event State	NORMAL (0)	BACnetEventState	Read
Reliability	NO_FAULT_DETECTED(0)	BACnetReliability	Read
Out Of Service	FALSE (0)	Boolean	Read/Write
Property List		BACnetARRAY[N] of BACnetPropertyIdentifier	Read

This object provides a simple indication of the direction of process flow. When the process fluid is detected as flowing in the normal direction, the present value will return inactive(0). When the process fluid is detected as flowing in the reverse direction, the present value will return active(1).

This object supports COV subscription to allow a monitoring system to easily detect changes in flow direction.

Binary Value – Empty Pipe

Property	Default Value	Property Data Type	Access
Object Identifier	BV2	BACnetObjectIdentifier	Read
Object Name	"Empty Pipe"	CharacterString	Read
ObjectType	BINARY_VALUE (5)	BACnetObjectType	Read
Present Value	Inactive (0)	BACnetBinaryPV	Read
Status Flags	0	BACnetStatusFlags	Read
Event State	NORMAL (0)	BACnetEventState	Read
Reliability	NO_FAULT_DETECTED(0)	BACnetReliability	Read
Out Of Service	FALSE (0)	Boolean	Read/Write
Property List		BACnetARRAY[N] of BACnetPropertyIdentifier	Read

This object provides a simple indication of an error state where no process flow is in contact with the probe. When the process fluid is detected, the present value will return inactive(0). When the process fluid is not detected, the present value will return active(1).

This object supports COV subscription to allow a monitoring system to easily detect this error condition.

Binary Value – Reset Total Flow

Property	Default Value	Property Data Type	Access
Object Identifier	BV3	BACnetObjectIdentifier	Read
Object Name	"Reset Total Flow"	CharacterString	Read
ObjectType	BINARY_VALUE (5)	BACnetObjectType	Read
Present Value	Inactive (0)	BACnetBinaryPV	Read/Write
Status Flags	0	BACnetStatusFlags	Read
Event State	NORMAL (0)	BACnetEventState	Read
Reliability	NO_FAULT_DETECTED(0)	BACnetReliability	Read
Out Of Service	FALSE (0)	Boolean	Read/Write
Property List		BACnetARRAY[N] of BACnetPropertyIdentifier	Read

Writing a value of 1 to the present value of this object will reset the value of Total Flow to 0. Writing a value of 0 has no effect.

BitString Value – Status Flags

Property	Default Value	Property Data Type	Access
Object Identifier	BSV1	BACnetObjectIdentifier	Read
Object Name	"Status Flags"	CharacterString	Read
ObjectType	BITSTRING_VALUE (39)	BACnetObjectType	Read
Present Value	{FFFFFFFF FFFF}	BitString	Read
Status Flags	0	BACnetStatusFlags	Read
Event State	NORMAL (0)	BACnetEventState	Read
Reliability	NO_FAULT_DETECTED(0)	BACnetReliability	Read
Out Of Service	FALSE (0)	Boolean	Read/Write
Property List		BACnetARRAY[N] of BACnetPropertyIdentifier	Read

This object provides a means for the meter to convey additional error status to a BACnet client. See the table below for a definition of each bit.

Bit	Meaning
0	Error: Reading/Writing Non-voltaile storage
1	Reserved
2	Error: Process measurement error
3	Error: Meter recovered from watchdog reset
4	Error: Factory configuration invalid
5	Error: Wiring board not installed/detected
6	Error: Power Supply board not installed/detected
7	Reserved
8	Error: Measurement board not installed/detected
9	Error: Excitation board not installed/detected
10	Error: Calibration Data Invalid
11	Error: Process Temperature Probe Failure

BACnet Services
ReadProperty (DS-RP-B) ReadPropertyMultiple(DS-RPM-B)
WriteProperty (DS-WP-B) WritePropertyMultiple(DS-WPM-B)

Device Communication Control Service (DM-DCC-B)
This device supports the Device Communication Control Service BIBB. The optional time duration in minutes is also supported. This device is configured with a password that must be provided to successfully execute this command. The password is "Dwyer".

Reinitialize Device Service (DM-RD-B)
This device supports the Reinitialize Device Service BIBB. The supported device states are COLDSTART and WARMSTART. All other states return error. This device is configured with a password that must be provided to successfully execute this command. The password is "Dwyer".

SubscribeCOV Service (DS-COV-B)
This device supports the SubscribeCOV Service BIBB to allow easy monitoring of input data.
 • Up to seven (7) concurrent subscriptions
 • Confirmed and Unconfirmed COV Notifications
 • Fixed lifetime value up to 86400 seconds (24 hours).
 • Indefinite lifetime supported.

Modbus® Functions
The device supports the following functions

Function Name	Function Code
Read Holding Registers	03
Read Input Registers	04
Write Single Register	06
Write Multiple Registers	16

Modbus® Registers
Input Registers

Register	Description	Data Type	Range
0001	Velocity	32bit Float	
0003	Flow	32bit Float	
0005	Total Flow	32bit Float	
0007	Reverse Flow	Unsigned 16bit Integer	0 – Normal
0008	Empty Pipe		1 – Reverse
0009 - 0010	Status Flags	Unsigned 16bit Integer	0 – Process detected
8001 - 8016	Model Number		1 – Process not detected
8017 - 8020	Serial Number	Unsigned 16bit Integer	See BACnet BitString
8021 - 8028	Firmware Version		Object "Status Flags"
8029 - 8032	Date Code	String	"IEF-HN-10-COM"
		String	"xxxxxxx"
		String	"x.x.x"
		String	"xxxxxxx"

The String data type is read as a stream of ASCII characters with the first character sent in the MSB of the first register and the second character sent in the LSB of the first register and so on. If the string is shorter than the allotted size, the remaining bytes will be zero padded.

Holding Registers

Register	Description	Data Type	Range
0001 – 0020	Device Name	String	
0021	Velocity Unit	Unsigned 16bit integer	0 – 7
0022	Flow Unit	Unsigned 16bit integer	0 – 15
0023	Volume Unit	Unsigned 16bit integer	0 – 3
0024	Reset Total Flow	Unsigned 16bit integer	0 or 1
0025	Reset Device	Unsigned 16bit integer	0 or 1

Device Name: A string, up to 40 characters long, that will be displayed on the LCD (if present). When reading or writing, all 20 registers must be requested. Strings less than 40 characters shall be 0 padded.

Velocity Unit: Selects the unit of velocity for the value in the velocity register. See Table 1.

Flow Unit: Selects the unit of flow for the value in the Flow register. See Table 2.

Volume Unit: Selects the unit of volume for the value in the Total Flow register. See Table 3.

Reset Total Flow: When a value of 1 is written to this register, the value in the Total Flow register is reset to 0. Writing a value of 0 has no effect. This register will always return a 0 when read.

Reset Device: When a value of 1 is written to this register, the device will perform a warm reset after 5 seconds. Writing a value of 0 has no effect. This register will always return 0 when read.

TABLE 1: VELOCITY UNIT VALUES	
Value	Unit
*0	Feet-per-second (ft/s)
1	Feet-per-minute (ft/min)
2	Feet-per-hour (ft/hr)
3	Feet-per-day (ft/day)
4	Meters-per-second (m/s)
5	Meters-per-minute (m/min)
6	Meters-per-hour (m/hr)
7	Meters-per-day (m/day)

TABLE 2: FLOW UNIT VALUES	
Value	Unit
*0	Cubic-feet-per-second (ft^3/s)
1	Cubic-feet-per-minute (ft^3/min)
2	Cubic-feet-per-hour (ft^3/hr)
3	Cubic-feet-per-day (ft^3/day)
4	Gallons-per-second (gal/s)
5	Gallons-per-minute (gal/min)
6	Gallons-per-hour (gal/hr)
7	Gallons-per-day (gal/day)
8	Liters-per-second (L/s)
9	Liters-per-minute (L/min)
10	Liters-per-hour (L/hr)
11	Liters-per-day (L/day)
12	Cubic-meters-per-second (m^3/s)
13	Cubic-meters-per-minute (m^3/min)
14	Cubic-meters-per-minute (m^3/min)
15	Cubic-meters-per-day (m3/day)

TABLE 3: VOLUME UNIT VALUES	
Value	Unit
0	Cubic-feet (ft^3)
*1	Gallons (gal)
2	Liters (L)
3	Cubic-meters (m3)

* Default unit

Multi-Address Support

Multi-Address support allows a register to be read or written to using different byte orientations specified by the address range. For example, input register 0003 can also be read at 2003, 4003 and 6003 with different byte orientations as listed in Table 7. Registers that do not have multi-address support are only available in Big-Endian byte orientation (Modbus® standard).

Byte Order	Address Range	Float/32bit Values				16Bit Values	
		Register 1		Register 2		Register 3	
		MSB			LSB	MSB	LSB
Big-Endian	1-2000	A	B	C	D	A	B
Byte Swap	2001-4000	B	A	D	C	B	A
Word Swap	4001-6000	C	D	A	B	A	B
Little-Endian	6001-8000	D	C	B	A	B	A
